#### SIERRA BANCORP NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS September 30, 2011

#### Note 1 – The Business of Sierra Bancorp

Sierra Bancorp (the "Company"), headquartered in Porterville, California, is a California corporation registered as a bank holding company under the Bank Holding Company Act of 1956, as amended. The Company was incorporated in November 2000 and acquired all of the outstanding shares of Bank of the Sierra (the "Bank") in August 2001. The Company's principal subsidiary is the Bank, and the Company exists primarily for the purpose of holding the stock of the Bank and of such other subsidiaries it may acquire or establish. At the present time, the Company's only other direct subsidiaries are Sierra Statutory Trust II and Sierra Capital Trust III, which were formed in March 2004 and June 2006, respectively, solely to facilitate the issuance of capital trust pass-through securities. Pursuant to the Financial Accounting Standards Board's (FASB's) standard on the consolidation of variable interest entities, these trusts are not reflected on a consolidated basis in the financial statements of the Company. References herein to the "Company" include Sierra Bancorp and its consolidated subsidiary, the Bank, unless the context indicates otherwise.

The Bank is a California state-chartered bank headquartered in Porterville, California, that offers a full range of retail and commercial banking services to communities in the central and southern sections of the San Joaquin Valley. Our branch footprint stretches from Fresno on the north to Bakersfield on the south, and on the southern end extends east through the Tehachapi plateau and into the northwestern tip of the Mojave Desert. The Bank was incorporated in September 1977 and opened for business in January 1978, and in the ensuing years has grown to be the largest independent bank headquartered in the South San Joaquin Valley. Our growth has primarily been organic, but includes the acquisition of Sierra National Bank in 2000. We currently operate 25 full service branch offices throughout our geographic footprint, as well as an internet branch which provides the ability to open deposit accounts and submit certain loan applications online. The Bank's newest "brick and mortar" branches opened for business in Selma in February 2011 and Farmersville in March 2010. In January 2011 we closed our first branch ever, in Bakersfield on California Avenue due to lease issues, and we are currently searching for a suitable location to replace that branch. In addition to our full-service branches, the Bank has an agricultural credit division and an SBA lending unit with staff located at our corporate headquarters, and offsite ATM's at eight different non-branch locations. The Bank's deposit accounts are insured by the Federal Deposit Insurance Corporation (FDIC) up to maximum insurable amounts.

#### Note 2 – Basis of Presentation

The accompanying unaudited consolidated financial statements have been prepared in a condensed format, and therefore do not include all of the information and footnotes required by U.S. generally accepted accounting principles (GAAP) for complete financial statements. The information furnished in these interim statements reflects all adjustments that are, in the opinion of management, necessary for a fair statement of the results for such period. Such adjustments are of a normal recurring nature, unless otherwise disclosed in this Form 10-Q. In preparing the accompanying consolidated financial statements, management has taken subsequent events into consideration and recognized them where appropriate. The results of operations in the interim statements are not necessarily indicative of the results that may be expected for any other quarter, or for the full year. Certain amounts reported for 2010 have been reclassified to be consistent with the reporting for 2011. The interim financial information should be read in conjunction with the Company's Annual Report on Form 10-K for the year ended December 31, 2010, as filed with the Securities and Exchange Commission.

#### Note 3 – Current Accounting Developments

In September 2011, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2011-08, Intangibles—Goodwill and Other (Topic 350) - Testing Goodwill for Impairment. The objective of ASU 2011-08 is to simplify how entities test goodwill for impairment. Topic 350 requires an entity to test goodwill for impairment on at least an annual basis, by comparing the fair value of a reporting unit with its carrying amount, including goodwill (step one). If the fair value of a reporting unit is less than its carrying amount, then the second step of the test must be performed to measure the amount of the impairment loss, if any. Pursuant to ASU 2011-08, an entity will not be required to calculate the fair value of a reporting unit and perform step one unless, after assessing qualitative factors, the entity determines that it is more likely than not that its fair value is less than its carrying amount. The more-likely-than-not threshold is defined as having a likelihood of more than 50 percent. This update is effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011. Early adoption is permitted, including for annual and interim goodwill impairment tests performed as of a date before September 15, 2011, if an entity's financial statements for the most recent annual or interim period have not yet been issued. Management expects that the adoption of ASU 2011-08 will not have an impact on the Company's financial statements, as the Company has not yet been required to perform the second step of the goodwill impairment test since the first step has, thus far, always determined that the fair value of the reporting unit, Bank of the Sierra, is greater than its carrying amount.

In June 2011, the Financial FASB issued ASU 2011-05, Comprehensive Income (Topic 220) - Presentation of Comprehensive Income. Current U.S. generally accepted accounting principles allow reporting entities several alternatives for displaying other comprehensive income and its components in financial statements, and ASU 2011-05 is intended to improve the consistency of this reporting issue. The amendments in this ASU require all non-owner changes in stockholders' equity to be presented either in a single continuous statement of comprehensive income, or in two separate but consecutive statements. In a single continuous statement, the entity is required to present the components of net income and total net income, the components of other comprehensive income and a total for other comprehensive income, along with the total of comprehensive income in that statement. In the two-statement approach, an entity is required to present components of net income and total net income in the statement of net income. The statement of other comprehensive income should immediately follow the statement of net income and include the components of other comprehensive income and a total for other comprehensive income, along with a total for comprehensive income. Furthermore, the entity is required to present, on the face of the financial statements, adjustments for items that are reclassified from other comprehensive income to net income in the statements, where the components of net income and the components of other comprehensive income are presented. The amendments in the ASU do not change the following: 1) items that must be reported in other comprehensive income; 2) when an item of other comprehensive income must be reclassified to net income; 3) the option to present components of other comprehensive income either net of related tax effects or before related tax effects; or, 4) how earnings per share is calculated or presented. The amendments in ASU 2011-05 should be applied retrospectively. For public entities, such as the Company, the amendments are effective for fiscal years, and interim periods within those years, beginning after December 15, 2011. Early adoption is permitted. The Company's adoption of this ASU will impact our presentation of comprehensive income, but not the calculation of such.

In May 2011, the FASB issued ASU No. 2011-04, Fair Value Measurement (Topic 820): Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs, to substantially converge the fair value measurement and disclosure guidance in U.S. GAAP with International Financial Reporting Standards ("IFRS"). The amended guidance changes several aspects of current fair value measurement guidance, including the following provisions: 1) the application of the concepts of "highest and best use" and "valuation premise"; 2) the introduction of an option to measure groups of offsetting assets and liabilities on a net basis; 3) the incorporation of certain premiums and discounts in fair value measurements; and, 4) the measurement of the fair value of certain instruments classified in shareholders' equity. In addition, the amended guidance includes several new fair value disclosure requirements, including, among other things, information about valuation techniques and unobservable inputs used in Level 3 fair value measurements and a narrative description of Level 3 measurements' sensitivity to changes in unobservable inputs. For public entities such as the Company, the provisions of ASU 2011-04 are effective for interim and annual periods beginning after December 15, 2011, and are to be applied prospectively. The implementation of ASU 2011-04 is not expected to change fair value measurements for any of the Company's assets or liabilities carried at fair value, and thus should not impact the Company's statements of income and condition.

In April 2011, the FASB issued ASU No. 2011-02, Receivables (Topic 310): A Creditor's Determination of Whether a Restructuring is a Troubled Debt Restructuring, in an effort to improve financial reporting by creating greater consistency in the way GAAP is applied for various types of debt restructurings. ASU 2011-02 is intended to assist creditors in determining whether a modification of the terms of a loan meets the criteria to be considered a troubled debt restructuring ("TDR"), both for purposes of recording an impairment loss and for disclosure of TDR's. In evaluating whether a restructuring constitutes a TDR, a creditor must separately conclude that both of the following exist: 1) the restructuring constitutes a concession; and 2) the debtor is experiencing financial difficulties. The amendments to Topic 310 clarify the guidance on a creditor's evaluation of whether it has granted a concession, and likewise clarify the guidance on a creditor's evaluation of whether a debtor is experiencing financial difficulties. In addition, the amendments to Topic 310 preclude creditors from using the effective interest rate test in the debtor's guidance on restructuring of payables (paragraph 470-60-55-10) when evaluating whether a restructuring constitutes a TDR. For public companies, such as Sierra Bancorp, the new guidance is effective for interim and annual periods

beginning on or after June 15, 2011, and applies retrospectively to restructurings occurring on or after the beginning of the fiscal year of adoption. Early adoption is permitted, and the Company adopted the provisions of ASU 2011-02 for the reporting period ended June 30, 2011. There was a total of \$552,000 in loan balances that were added to performing TDR's at June 30, 2011 as a direct result of the Company's adoption of ASU 2011-02, with only a negligible impact on our allowance for loan and lease losses.

In July 2010, the FASB updated disclosure requirements with respect to the credit quality of financing receivables and the allowance for credit losses. According to the guidance, there are two levels of detail at which credit information must be presented - the portfolio segment level and class level. The portfolio segment level is defined as the level where financing receivables are aggregated in developing a company's systematic method for calculating its allowance for credit losses. The class level is the second level at which credit information will be presented, and represents the categorization of financing receivables at a slightly less aggregated level than the portfolio segment level. Companies are required to provide the following disclosures as a result of this update: A roll-forward of the allowance for credit losses at the portfolio segment level, with the ending balances further categorized according to impairment method along with the balance reported in the related financing receivables at period-end; additional disclosures of nonaccrual and impaired financing receivables by class as of period-end; credit quality and past due/aging information by class as of period-end; information surrounding the nature and extent of loan modifications and troubled-debt restructurings and their effect on the allowance for credit losses during the period; and details on any significant purchases or sales of financing receivables during the period. The increased period-end disclosure requirements became effective for periods ending on or after December 15, 2010, with the exception of the additional period-end disclosures surrounding troubled-debt restructurings which were deferred in December 2010 and became effective for annual and interim reporting periods ending on or after June 15, 2011. The increased disclosures for activity within a reporting period become effective for periods beginning on or after June 15, 2011, with retrospective application to January 1, 2011. The provisions of this FASB update expanded the Company's current disclosures with respect to our allowance for loan and lease losses and the credit quality of our financing receivables.

#### Note 4 – Supplemental Disclosure of Cash Flow Information

During the nine months ended September 30, 2011 and 2010, cash paid for interest due on interest-bearing liabilities was \$3.991 million and \$6.522 million, respectively. There was also \$1.643 million in cash paid for income taxes during the nine months ended September 30, 2011, and \$5.360 million in cash paid for income taxes during the nine months ended September 30, 2010. Assets totaling \$4.663 million and \$14.068 million were acquired in settlement of loans for the nine months ended September 30, 2011 and September 30, 2010, respectively, and we received \$4.285 million in cash from the sale of foreclosed assets during the first nine months of 2011 relative to \$4.520 million during the first nine months of 2010. The Company extended \$1.506 million in loans to finance the sale of foreclosed assets during the nine months ended September 30, 2011, but none during the first nine months of 2010.

#### Note 5 – Share Based Compensation

The 2007 Stock Incentive Plan (the "2007 Plan") was adopted by the Company in 2007. Our 1998 Stock Option Plan (the "1998 Plan") was concurrently terminated, although options to purchase 276,630 shares that were granted prior to the termination of the 1998 Plan were still outstanding as of September 30, 2011 and remain unaffected by the termination. The 2007 Plan provides for the issuance of both "incentive" and "nonqualified" stock options to officers and employees, and of "nonqualified" stock options to non-employee directors of the Company. The 2007 Plan also provides for the potential issuance of restricted stock awards to these same classes of eligible participants, on such terms and conditions as are established at the discretion of the Board of Directors or the Compensation Committee. The total number of shares of the Company's authorized but unissued stock reserved for issuance pursuant to awards under the 2007 Plan was initially 1,500,000 shares, although options have been granted since the inception of the plan and the number remaining available for grant as of September 30, 2011 was 1,050,440. The dilutive impact of stock options outstanding is discussed below in Note 6, Earnings per Share. No restricted stock awards have been issued by the Company.

Pursuant to FASB's standards on stock compensation, share-based compensation expense is reflected in our income statement for each option granted over the vesting period of such option. The Company is utilizing the Black-Scholes model to value stock options, and the "multiple option" approach is used to allocate the resulting valuation to actual

expense. Under the multiple option approach, an employee's options for each vesting period are separately valued and amortized. This appears to be the preferred method for option grants with multiple vesting periods, which is the case for most options granted by the Company. A pre-tax charge of \$48,000 was reflected in the Company's income statement during the third quarter of 2011 and \$30,000 was charged during the third quarter of 2010, as compensation expense related to outstanding and unvested stock options. For the first nine months, these charges amounted to \$166,000 in 2011 and \$96,000 in 2010.

#### Note 6 – Earnings per Share

The computation of earnings per share, as presented in the Consolidated Statements of Income, is based on the weighted average number of shares outstanding during each period. There were 14,051,614 weighted average shares outstanding during the third quarter of 2011, and 11,650,137 during the third quarter of 2010. There were 14,015,583 weighted average shares outstanding during the first nine months of 2011, and 11,642,517 during the first nine months of 2010. The increase for 2011 is due primarily to the Company's issuance of 2,325,000 shares of its common stock at a price of \$10 per share on October 19, 2010, in a registered direct offering to select institutional investors.

Diluted earnings per share include the effect of the potential issuance of common shares, which for the Company is limited to "in-the-money" shares that would be issued on the exercise of outstanding stock options. The dilutive effect of options outstanding was calculated using the treasury stock method, excluding anti-dilutive shares and adjusting for unamortized expense and windfall tax benefits. For the third quarter and first nine months of 2011, the dilutive effect of options outstanding calculated under the treasury stock method totaled 45,754 and 66,353, respectively, which were added to basic weighted average shares outstanding for purposes of calculating diluted earnings per share. Likewise, for the third quarter and first nine months of 2010, shares totaling 87,930 and 85,744, respectively, were added to basic weighted average shares outstanding in order to calculate diluted earnings per share.

#### Note 7 – Comprehensive Income

Comprehensive income includes net income and other comprehensive income. The Company's only source of other comprehensive income is unrealized gains and losses on available-for-sale investment securities. Reclassification adjustments, resulting from gains or losses on investment securities that were realized and included in net income of the current period that also had been included in other comprehensive income as unrealized holding gains or losses in the period in which they arose, are excluded from comprehensive income of the current period. The Company's comprehensive income was as follows:

Comprehensive Income								
(dollars in thousands, unaudited)	For the Quarter			F	For the Nine-Month Period			
	Ended Sep	temb	er 30,		Ended Septe	emb	er 30,

Comprehensive income	\$ 3,583	\$	(627)	\$	10,362	\$	5,735	

Note 8 – Financial Instruments with Off-Balance-Sheet Risk

The Company is a party to financial instruments with off-balance-sheet risk in the normal course of business, in order to meet the financing needs of its customers. These financial instruments consist of commitments to extend credit, and standby letters of credit. They involve, to varying degrees, elements of risk in excess of the amount recognized in the balance sheet. The Company's exposure to credit loss in the event of nonperformance by counterparties for commitments to extend credit and letters of credit is represented by the contractual amount of those instruments. The Company uses the same credit policies in making commitments and issuing letters of credit as it does for making

loans included on the balance sheet. The following financial instruments represent off-balance-sheet credit risk (dollars in thousands):

September 30, 20 December 31, 2010

Commitments to extend credit	\$ 157,120	\$ 142,309
Standby letters of credit	\$ 11,967	\$ 7,761
Commercial letters of credit	\$ 8,995	\$ 9,435

Commitments to extend credit consist primarily of unfunded single-family residential construction loans and home equity lines of credit, and commercial real estate construction loans and commercial revolving lines of credit. Construction loans are established under standard underwriting guidelines and policies and are secured by deeds of trust, with disbursements made over the course of construction. Commercial revolving lines of credit have a high degree of industry diversification. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since many commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. Standby letters of credit are generally unsecured and are issued by the Company to guarantee the performance of a customer to a third party, while commercial letters of credit represent the Company's commitment to pay a third party on behalf of a customer upon fulfillment of contractual requirements. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loans to customers.

Note 9 - Fair Value Disclosures and Reporting, the Fair Value Option and Fair Value Measurements

FASB's standards on financial instruments, and on fair value measurements and disclosures, require all entities to disclose the estimated fair value of all financial instruments for which it is practicable to estimate fair values. In addition to those footnote disclosure requirements, FASB's standard on investments requires that our debt securities, which are classified as available for sale, and our equity securities that have readily determinable fair values, be measured and reported at fair value in our statement of financial position. Certain impaired loans are also reported at fair value, as explained in greater detail below, and foreclosed assets are carried at the lower of cost or fair value. While the fair value option outlined under FASB's standard on financial instruments permits companies to report certain other financial assets and liabilities at fair value, we have not elected the fair value option for any additional financial assets or liabilities.

Fair value measurements and disclosure standards also establish a framework for measuring fair value. Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability, in an orderly transaction between market participants on the measurement date. Further, they establish a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The standards describe three levels of inputs that may be used to measure fair value:

- Level 1: Quoted prices (unadjusted) for identical assets or liabilities in active markets that the entity has the ability to access as of the measurement date.
- •Level 2: Significant observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not active, and other inputs that are observable or can be corroborated by observable market data.
- Level 3: Significant unobservable inputs that reflect a company's own assumptions about the factors that market participants would likely consider in pricing an asset or liability.

Fair value estimates are made at a specific point in time based on relevant market data and information about the financial instruments. These estimates do not reflect any premium or discount that could result from offering the Company's entire holdings of a particular financial instrument for sale at one time, nor do they attempt to estimate the

value of anticipated future business related to the instruments. In addition, the tax ramifications related to the realization of unrealized gains and losses can have a significant effect on fair value estimates and have not been considered in any estimates. Because no market exists for a significant portion of the Company's financial instruments, fair value disclosures are based on judgments regarding current economic conditions, risk characteristics of various financial instruments and other factors. These estimates are subjective in nature and involve uncertainties and matters of significant judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect the fair values presented. The following methods and assumptions were used by the Company to estimate the fair value of its financial instruments disclosed at September 30, 2011 and December 31, 2010:

- Cash and cash equivalents and short-term borrowings: For cash and cash equivalents and short-term borrowings, the carrying amount is estimated to be fair value.
- Investment securities: The fair values of investment securities are determined by obtaining quoted prices on nationally recognized securities exchanges or by matrix pricing, which is a mathematical technique used widely in the industry to value debt securities by relying on the securities' relationship to other benchmark quoted securities when quoted prices for the specific securities are not readily available.
- •Loans and leases: For variable-rate loans and leases that re-price frequently with no significant change in credit risk or interest rate spread, fair values are based on carrying values. Fair values for other loans and leases are estimated by discounting projected cash flows at interest rates being offered at each reporting date for loans and leases with similar terms, to borrowers of comparable creditworthiness. Fair values of loans held for sale are estimated using quoted market prices for similar loans or the amount that has been committed to purchase the loan. The carrying amount of accrued interest receivable approximates its fair value.
- Cash surrender value of life insurance policies: The fair values are based on cash surrender values at each reporting date.
- Investment in, and capital commitments to, limited partnerships: The fair values of our investments in WNC Institutional Tax Credit Fund Limited Partnerships and any other limited partnerships are estimated using quarterly indications of value provided by the general partner. The fair values of undisbursed capital commitments are assumed to be the same as their book values.
- Other investments: Included in other assets are certain long-term investments carried at cost, which approximates their estimated fair value.
- Deposits: Fair values for demand deposits and other non-maturity deposits are equal to the amount payable on demand at the reporting date, which is the carrying amount. Fair values for fixed-rate certificates of deposit are estimated using a cash flow analysis, discounted at interest rates being offered at each reporting date by the Bank for certificates with similar remaining maturities. The carrying amount of accrued interest payable approximates its fair value.
- Short-term borrowings: The carrying amounts approximate fair values for federal funds purchased, overnight FHLB advances, borrowings under repurchase agreements, and other short-term borrowings maturing within ninety days of the reporting dates. Fair values of other short-term borrowings are estimated by discounting projected cash flows at the Company's current incremental borrowing rates for similar types of borrowing arrangements.
- Long-term borrowings: The fair values of the Company's long-term borrowings are estimated using projected cash flows discounted at the Company's current incremental borrowing rates for similar types of borrowing arrangements.
- Subordinated debentures: The fair values of subordinated debentures are determined based on the current market value for like instruments of a similar maturity and structure.
- Commitments to extend credit and letters of credit: Commitments to extend credit are primarily for adjustable rate loans. Commitments to fund fixed rate loans and letters of credit, where such exist, are also at rates which approximate market rates at each reporting date. Thus, if funded, the carrying amounts would approximate fair values for the newly created financial assets at the funding date. However, because of the high degree of uncertainty with regard to whether or not these commitments will ultimately be funded, fair values for loan commitments and letters of credit in their current undisbursed state cannot reasonably be estimated, and only

notional values are disclosed in the table below.

Estimated fair values for the Company's financial instruments at September 30, 2011 and December 31, 2010 are as follows:

Fair Value of Financial Instruments

					-	•		

For each financial asset category that was actually reported at fair value at September 30, 2011, the Company used the following methods and significant assumptions:

- Investment Securities: The fair values of trading securities and securities available for sale are determined by obtaining quoted prices on nationally recognized securities exchanges or by matrix pricing, which is a mathematical technique used widely in the industry to value debt securities by relying on the their relationship to other benchmark quoted securities.
- •Loans held for sale: Since loans designated by the Company as available-for-sale are typically sold shortly after making the decision to sell them, realized gains or losses are usually recognized within the same period and fluctuations in fair values are thus not relevant for reporting purposes. If available-for-sale loans stay on our books for an extended period of time, the fair value of those loans is determined using quoted secondary-market prices.
- Impaired loans: Impaired loans carried at fair value are those for which it is probable that the bank will be unable to collect all amounts due (including both interest and principal) according to the original contractual terms of the loan agreement, and for which the carrying value has been written down to the fair value of the loan. The carrying value

is equivalent to the fair value of the collateral, net of expected disposition costs, for collateral-dependent loans, or the present value of anticipated future cash flows for other loans.

• Foreclosed assets: Repossessed real estate (OREO) and other assets are carried at the lower of cost or fair value. Fair value is appraised value less expected selling costs for OREO and some other assets such as mobile homes, and estimated sales proceeds as determined by using reasonably available sources for all other assets. Foreclosed assets for which appraisals can be feasibly obtained are periodically measured for impairment using updated appraisals. Other foreclosed assets are periodically re-evaluated by adjusting expected cash flows and timing of resolution, again using reasonably available sources. If impairment is determined to exist, the book value of a foreclosed asset is immediately written down to its estimated impaired value through the income statement, thus the carrying amount is equal to the fair value and there is no valuation allowance.

Assets reported at fair value on a recurring basis are summarized below:

The table above only includes impaired loan balances for which a specific reserve has been established or on which a write-down has been taken. Information on the Company's total impaired loan balances, and specific loss reserves associated with those balances, is included in Note 11 below, and in Management's Discussion and Analysis of Financial Condition and Results of Operation in the "Nonperforming Assets" and "Allowance for Loan and Lease Losses" sections.

#### Note 10 – Investments

Although the Company currently has the intent and the ability to hold the securities in its investment portfolio to maturity, the securities are all marketable and are classified as "available for sale" to allow maximum flexibility with regard to interest rate risk and liquidity management. Pursuant to FASB's guidance on accounting for debt and equity securities, available for sale securities are carried on the Company's financial statements at their estimated fair market value, with monthly tax-effected "mark-to-market" adjustments made vis-à-vis accumulated other comprehensive income in shareholders' equity. The Company's available-for-sale investment securities totaled \$430 million at September 30, 2011, and \$332 million at December 31, 2010.

At September 30, 2011 and December 31, 2010, the Company had 59 securities and 141 securities, respectively, with unrealized losses. Management has evaluated these securities as of the respective dates, and does not believe that any of the associated unrealized losses are other than temporary. Information pertaining to these investment securities, aggregated by investment category and length of time that individual securities have been in a continuous loss position, is disclosed in the table below.

#### Note 11 - Credit Quality and Nonperforming Assets

#### **Credit Quality Classifications**

The Company monitors the credit quality of loans on a continuous basis using the regulatory and accounting classifications of pass, special mention, substandard and impaired to characterize the associated credit risk. Balances classified as "loss" are immediately charged-off. The Company uses the following definitions of risk classifications:

- Pass: Loans listed as pass include larger non-homogeneous loans not meeting the risk rating definitions below and smaller, homogeneous loans that are not assessed on an individual basis.
- Special Mention: Loans classified as special mention have potential issues that deserve the close attention of management. If left uncorrected, these potential weaknesses could eventually diminish the prospects for full repayment of principal and interest according to the contractual terms of the loan agreement, or could result in deterioration of the Company's credit position at some future date.
- Substandard: Loans classified as substandard are loans with at least one clear and well-defined weakness such as a highly leveraged position, unfavorable financial operating results and/or trends, uncertain repayment sources or poor financial condition, which could jeopardize ultimate recoverability of the debt.
- Impaired: A loan is considered impaired, when, based on current information and events, it is probable that the Company will be unable to collect all amounts due according to the contractual terms of the loan agreement. Impaired loans include all nonperforming loans, loans classified as restructured troubled debt, and certain other loans that are still being maintained on accrual status. If the Bank grants a concession to a borrower in financial difficulty, the loan falls into the category of a troubled debt restructuring (TDR). TDR's may be classified as either nonperforming or performing loans depending on their accrual status.

Credit quality classifications for the Company's loan balances were as follows, as of the dates indicated:

#### Past Due and Nonperforming Assets

Nonperforming assets are comprised of loans for which the Company is no longer accruing interest, and foreclosed assets, including mobile homes and other real estate owned ("OREO"). OREO consists of properties acquired by foreclosure or similar means, which the Company is offering or will offer for sale. Nonperforming loans and leases result when reasonable doubt exists with regard to the ability of the Company to collect all principal and interest on a loan or lease. At that point, we stop accruing interest on the loan or lease in question, and reverse any previously-recognized interest to the extent that it is uncollected or associated with interest-reserve loans. Any asset for which principal or interest has been in default for a period of 90 days or more is also placed on non-accrual status, even if interest is still being received, unless the asset is both well secured and in the process of collection. An aging of the Company's loan balances, by number of days past due as of the indicated dates, is presented in the following table:

# Loan Portfolio Aging (dollars in thousands, unaudited)

#### Troubled Debt Restructurings

A loan that is modified for a borrower who is experiencing financial difficulty is classified as a troubled debt restructuring ("TDR"), if the modification constitutes a concession. At September 30, 2011, the Company had a total of \$54.3 million in TDR's, including \$19.9 million in TDR's that were on non-accrual status. The Company typically places a TDR on non-accrual status and ceases accruing interest when loan payment performance is deemed unsatisfactory, generally at 90 days past due. Additionally, whenever a notice of default or disposition is filed on a loan the loan is placed on non-accrual. A TDR is generally considered to be in default when it appears likely that the customer will not be able to repay all principal and interest pursuant to the terms of the restructured agreement. TDR's may be restored to accrual status when there has been satisfactory repayment performance for a period that is normally not less than 6 months, and the Company reasonably believes that it will continue to receive all future principal and interest pursuant to the terms of the agreement. TDR's may be removed from TDR designation in the calendar year following the restructuring, if the loan is in compliance with all modified terms and is yielding a market rate of interest.

The Company may agree to different types of concessions when modifying a loan or lease. The table below summarizes TDR modifications by type of concession, for the noted periods:

<sup>(1)</sup> This represents the change in the allocated loss allowance due to any change in reserve methodology subsequent to modification

In the table above, the TDR's that subsequently defaulted increased our allowance for loan and lease losses by \$5,000 for the three months and nine months ended September 30, 2011, and none of the TDR defaults have resulted in charge-offs. The total allowance for loan and lease losses specifically allocated to the balances that were classified as TDR's during the nine months ended September 30, 2011 was \$951,000 at September 30, 2011.

#### Note 12 – Allowance for Loan and Lease Losses

The allowance for loan and lease losses, a contra-asset, is established through a provision for loan and lease losses based on management's evaluation of probable loan losses on certain specifically identified loans, as well as probable incurred losses inherent in the remaining loan portfolio. It is maintained at a level that is considered adequate to absorb remaining probable loan losses, after factoring in charge-offs taken against the allowance and recoveries credited back to the allowance. Specifically identifiable and quantifiable losses are immediately charged off against the allowance; recoveries are generally recorded only when cash payments are received subsequent to the charge off. We employ a systematic methodology, consistent with FASB guidelines on loss contingencies and impaired loans, for determining the appropriate level of the allowance for loan and lease losses and adjusting it on at least a quarterly basis. Pursuant to that methodology, impaired loans and leases are individually analyzed and a criticized asset action plan is completed specifying the financial status of the borrower and, if applicable, the characteristics and condition of collateral and any associated liquidation plan. A specific loss allowance is created for each impaired loan, if necessary. The following tables disclose the unpaid principal balance, recorded investment (including accrued interest), average recorded investment, and interest income recognized for impaired loans on our books as of the dates indicated. Balances are shown by loan type, and are further broken out by those that required an allowance and those that did not, with the associated allowance disclosed for those that required such.

Total non-accrual loans	\$ 48,544	\$ 49,954
Total loans past-due ninety days or more and still accruing	\$ -	\$ -

#### (1) Principal balance only

The specific loss allowance for an impaired loan represents the difference between the face value of the loan and either its current appraised value less estimated disposition costs, or its net present value as determined by a discounted cash flow analysis. The discounted cash flow approach is used to measure impairment on loans for which it is anticipated that repayment will be provided from cash flows other than those generated solely by the disposition of underlying collateral. Any change in impairment attributable to the passage of time is adjusted for by means of adjustments to the loan loss provision. If a distressed borrower displays the desire and ability to continue paying on the loan, but is unable to do so except on a modified basis, an amended repayment plan may be negotiated. For these TDR's, the act of modification in and of itself suggests that the Company believes the source of repayment will likely be from borrower-generated cash flows, thus they are also typically evaluated for impairment by discounting projected cash flows. Included in the valuation allowance for impaired loans shown in the table above are specific reserves allocated to TDR's, totaling \$2.832 million at September 30, 2011, and \$2.973 million at December 31, 2010.

For loans where repayment is expected to be provided solely by the underlying collateral, impairment is measured using the fair value of the collateral. If the collateral value, net of the expected costs of disposition, is less than the loan balance, then a specific loss reserve is established for the amount of the collateral coverage shortfall. If the discounted collateral value is greater than or equal to the loan balance, no specific loss reserve is established. At the time a collateral-dependent loan is designated as nonperforming, a new appraisal is ordered and typically received within 30 to 60 days if a recent appraisal was not already available. We generally use external appraisals to determine the fair value of the underlying collateral for nonperforming real estate loans, although the Company's licensed staff appraisers may update older appraisals based on current market conditions and property value trends. Until an updated appraisal is received, the Company uses the existing appraisal to determine the amount of the specific loss allowance that may be required, and adjusts the specific loss allowance, as necessary, once a new appraisal is received. Updated appraisals are generally ordered at least annually for collateral-dependent loans that remain impaired. Current appraisals were available for 75% of the Company's impaired loan balances at September 30, 2011. Furthermore, the Company analyzes collateral-dependent loans on at least a quarterly basis, to determine if any portion of the recorded investment in such loans can be identified as uncollectible and would therefore constitute a confirmed loss. All amounts deemed to be uncollectible are promptly charged off against the Company's allowance for loan and lease losses, with the loan then carried at the fair value of the collateral, as appraised, less estimated costs of disposition if such costs were not reflected in appraised values. Once a charge-off or write-down is recorded, it will not be restored to the loan balance on the Company's accounting books.

Our methodology also provides that a "general" allowance be established for probable incurred losses inherent in loans and leases that are not impaired. These unimpaired loan balances are segregated by credit quality, and are then evaluated in pools with common characteristics. At the present time, pools are based on the same segmentation of

loan types presented in our regulatory filings. While this methodology utilizes historical loss data and other measurable information, the classification of loans and the establishment of the allowance for loan and lease losses are both to some extent based on management's judgment and experience. Our methodology incorporates a variety of risk considerations, both quantitative and qualitative, in establishing an allowance for loan and lease losses that management believes is appropriate at each reporting date. Quantitative information includes our historical loss experience, delinquency and charge-off trends, current collateral values, and the anticipated timing of collection of principal for nonperforming loans. Qualitative factors include the general economic environment in our markets and, in particular, the state of the agricultural industry and other key industries in the Central San Joaquin Valley. Lending policies and procedures (including underwriting standards), the experience and abilities of lending staff, the quality of loan review, credit concentrations (by geography, loan type, industry and collateral type), the rate of loan portfolio growth, and changes in legal or regulatory requirements are additional factors that are considered. The total general reserve established for probable incurred losses on unimpaired loans was \$9.3 million at September 30, 2011.

During the quarter ended September 30, 2011, there were no material changes made to the methodology used to determine our allowance for loan and lease losses. As we add new products and expand our geographic coverage, and as the economic environment changes, we expect to continue to enhance our methodology to keep pace with the size and complexity of the loan and lease portfolio and respond to pressures created by external forces. We engage outside firms on a regular basis to assess our methodology and perform independent credit reviews of our loan and lease portfolio. In addition, the Company's external auditors, the FDIC, and the California DFI review the allowance for loan and lease losses as an integral part of their audit and examination processes. Management believes that the current methodology is appropriate given our size and level of complexity. The table that follows details the activity in the allowance for loan and lease losses for the quarter and the nine months ended September 30, 2011:
