ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2010

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number 001-31341

Platinum Underwriters Holdings, Ltd.
(Exact name of registrant as specified in its charter)

Bermuda
(State or other jurisdiction of
incorporation or organization)

98-0416483
(I.R.S. Employer Identification No.)

The Belvedere Building
69 Pitts Bay Road
Pembroke HM 08, Bermuda
(Address of principal executive offices, including postal code)

Registrant's telephone number, including area code: (441) 295-7195

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered
Common Shares, par value \$0.01 per share	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was

Edgar Filing: PLATINUM UNDERWRITERS HOLDINGS LTD - Form 10-K

required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by a check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company)

Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of common shares held by non-affiliates of the registrant as of June 30, 2010, the last business day of our most recently completed second fiscal quarter, was \$1,466,762,289 based on the closing sale price of \$36.29 per common share on the New York Stock Exchange on that date. For purposes of this computation only, all executive officers, directors, and 10% beneficial owners of the registrant are deemed to be affiliates.

The registrant had 37,414,324 common shares, par value \$0.01 per share, outstanding as of February 9, 2011.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's definitive proxy statement for the 2011 Annual General Meeting of Shareholders are incorporated by reference into Part III of this report.

Note On Forward-Looking Statements

This Annual Report on Form 10-K for the year ended December 31, 2010 (this “Form 10-K”) contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 (the “Securities Act”) and Section 21E of the Securities Exchange Act of 1934 (the “Exchange Act”). Forward-looking statements are based on our current plans or expectations that are inherently subject to significant business, economic and competitive uncertainties and contingencies. These uncertainties and contingencies can affect actual results and could cause actual results to differ materially from those expressed in any forward-looking statements made by or on behalf of us. In particular, statements using words such as “may,” “should,” “estimate,” “expect,” “anticipate,” “intend,” “believe,” “predict,” “potential,” or of similar import generally involve forward-looking statements.

The inclusion of forward-looking statements in this Form 10-K should not be considered as a representation by us or any other person that our current plans or expectations will be achieved. Numerous factors could cause our actual results to differ materially from those in forward-looking statements, including the following:

- severe natural or man-made catastrophic events;
- the effectiveness of our loss limitation methods and pricing models;
- the adequacy of our liability for unpaid losses and loss adjustment expenses;
- our ability to maintain our A.M. Best Company, Inc. (“A.M. Best”) and Standard and Poor’s (“S&P”) ratings;
 - our ability to raise capital on acceptable terms if necessary;
 - the cyclical nature of the property and casualty reinsurance business;
- the highly competitive nature of the property and casualty reinsurance industry;
- our ability to maintain our business relationships with reinsurance brokers;
- the availability of retrocessional reinsurance on acceptable terms;
- market volatility and interest rate and currency exchange rate fluctuation;

• tax, regulatory or legal restrictions or limitations applicable to us or the property and casualty reinsurance business generally;

• general political and economic conditions, including the effects of civil unrest, acts of terrorism, war or a prolonged United States or global economic downturn or recession; and

• changes in our plans, strategies, objectives, expectations or intentions, which may happen at any time at our discretion.

As a consequence, our future financial condition and results may differ from those expressed in any forward-looking statements made by or on behalf of us. The foregoing factors, which are discussed in more detail in Item 1A, “Risk Factors,” in this Form 10-K, should not be construed as exhaustive. Additionally, forward-looking statements speak only as of the date they are made, and we undertake no obligation to revise or update forward-looking statements to reflect new information or circumstances after the date hereof or to reflect the occurrence of future events.

PART I

Item 1.

Business

General Overview

Platinum Underwriters Holdings, Ltd. (“Platinum Holdings”) is a holding company that is domiciled in Bermuda and was organized in 2002 with approximately \$2.1 billion in capital as of December 31, 2010. Through our reinsurance subsidiaries we provide property and marine, casualty and finite risk reinsurance coverages to a diverse clientele of insurers and select reinsurers on a worldwide basis.

- 1 -

Platinum Holdings and its consolidated subsidiaries (collectively the "Company") include Platinum Holdings, Platinum Underwriters Bermuda, Ltd. ("Platinum Bermuda"), Platinum Underwriters Reinsurance, Inc. ("Platinum US"), Platinum Re (UK) Limited ("Platinum UK"), Platinum Underwriters Finance, Inc. ("Platinum Finance"), Platinum Regency Holdings ("Platinum Regency"), Platinum Administrative Services, Inc. and Platinum UK Services Company Limited. The terms "we," "us," and "our" also refer to the Company, unless the context otherwise indicates.

Platinum Regency is an intermediate holding company based in Ireland and a wholly owned subsidiary of Platinum Holdings. Platinum Finance is a U.S. based intermediate holding company and a wholly owned subsidiary of Platinum Regency. We operate through two licensed reinsurance subsidiaries, Platinum Bermuda, a Bermuda reinsurance company, and Platinum US, a U.S. reinsurance company. Platinum Bermuda is a wholly owned subsidiary of Platinum Holdings and Platinum US is a wholly owned subsidiary of Platinum Finance. Platinum Administrative Services, Inc. and Platinum UK Services Company Limited are service company subsidiaries that provide administrative support services to the Company.

For the year ended December 31, 2010, our Property and Marine, Casualty and Finite Risk operating segments accounted for approximately 54%, 44% and 2%, respectively, of our total net written premiums of \$760.6 million. As of December 31, 2010, we had total investments and cash and cash equivalents of \$4.2 billion and shareholders' equity of \$1.9 billion.

Our Strategy

We seek to achieve attractive long-term returns for our shareholders through disciplined risk management and market leadership in selected classes of property and marine, casualty and finite risk reinsurance by employing the following strategy:

Operate as a multi-class reinsurer. We seek to offer a broad range of reinsurance coverages to our ceding companies. We believe that this approach enables us to more effectively serve our clients, diversify our risk and leverage our capital.

Focus on profitability, not market share. Our management team pursues a strategy that emphasizes profitability rather than market share. Key elements of this strategy are prudent risk selection, appropriate pricing and adjustment of our business mix to respond to changing market conditions.

Exercise disciplined underwriting and risk management. We exercise underwriting and risk management discipline by: (i) maintaining a diverse spread of risk in our book of business across product lines and geographic zones, (ii) emphasizing excess-of-loss contracts over proportional contracts, (iii) managing our aggregate property catastrophe exposure through the application of sophisticated modeling tools and (iv) monitoring our accumulating exposures on non-property catastrophe exposed coverages.

Operate from a position of financial strength. Our capital is unencumbered by any potential adverse development of unpaid losses for business written prior to January 1, 2002. Our investment strategy focuses on security and stability in our investment portfolio by maintaining a portfolio that consists primarily of diversified, high quality, predominantly investment grade fixed maturity securities.

We believe this strategy allows us to maintain our strong financial position and to be opportunistic when market conditions are most attractive.

Operating Segments

We have organized our worldwide reinsurance business into the following three operating segments: Property and Marine, Casualty and Finite Risk. We generally write reinsurance in each of our operating segments on either an excess-of-loss basis or a proportional basis (which is also referred to as pro rata or quota share).

In the case of excess-of-loss reinsurance, we assume all or a specified portion of the ceding company's risks in excess of a specified claim amount, referred to as the ceding company's retention or our attachment point. We manage our underwriting risk from excess-of-loss contracts by charging reinsurance premiums at specific retention levels based upon our own underwriting assumptions. Because ceding companies typically retain a larger loss exposure under excess-of-loss contracts, we believe that they typically have a strong incentive to underwrite risks and adjust losses in a prudent manner.

In the case of proportional reinsurance, we assume a predetermined portion of the ceding company's risks under the covered primary insurance contract or contracts. The frequency of claims under a proportional contract is usually greater than under an excess-of-loss contract, since we share proportionally in all losses. Premiums for proportional reinsurance are typically a predetermined portion of the premiums the ceding company receives from its insureds.

Substantially all of the reinsurance that we underwrite is on a treaty basis, which covers a type or category of insurance policies issued by the ceding company, and which could be written on either an excess-of-loss or proportional basis. In limited and opportunistic circumstances, we underwrite facultative reinsurance, where we assume all or a part of a specific insurance policy or policies, which again could be written on either an excess-of-loss or proportional basis.

The following table sets forth our net premiums written for the years ended December 31, 2010, 2009 and 2008 by operating segment and by type of reinsurance (\$ in thousands):

Net Premiums Written by Operating Segment and Type of Reinsurance

Additional financial information about our operating segments is set forth in Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operation,” in this Form 10-K.

Property and Marine

Property reinsurance protects a ceding company against financial loss arising out of damage to property or loss of its use caused by an insured peril. Property catastrophe reinsurance protects a ceding company against losses arising out of multiple claims for a single event while property per-risk reinsurance protects a ceding company against loss arising out of a single claim for a single event. Our Property and Marine operating segment includes principally property (including crop) and marine coverages that cover risks located in the United States and select international markets. This business includes property catastrophe excess-of-loss reinsurance contracts, property per-risk excess-of-loss reinsurance contracts and property proportional reinsurance contracts. We write a limited amount of property facultative reinsurance. Marine reinsurance treaties include excess-of-loss as well as proportional treaties. We employ underwriters and actuaries with expertise in each of the following areas:

Property. We provide reinsurance coverage for damage to property and crops. Our catastrophe excess-of-loss reinsurance contracts provide defined limits of liability, permitting us to quantify our aggregate maximum loss exposure for various catastrophic events. Quantification of loss exposure is fundamental to our ability to manage our loss exposure through geographical zone limits and program limits.

Marine. We provide reinsurance coverage for marine and offshore energy insurance programs. Coverages reinsured include hull damage, protection and indemnity, cargo damage, satellite damage, aviation hull, aviation liability, and general marine liability.

Casualty

Casualty reinsurance protects a ceding company against financial loss arising out of the obligation to others for loss or damage to persons or property. Our Casualty operating segment principally includes reinsurance contracts that cover general and product liability, professional liability, accident and health, umbrella liability, workers' compensation, casualty clash, automobile liability, surety, trade credit, and political risk. We generally write casualty reinsurance on an excess-of-loss basis. We write first dollar proportional casualty reinsurance contracts on an opportunistic basis.

We seek to write casualty reinsurance contracts covering established books of insurance products where we believe that past experience provides a reasonable basis to price the reinsurance adequately. We underwrite new exposures selectively and perform a comprehensive evaluation of the risk and ceding company being reinsured. We employ underwriters and actuaries that have expertise in one or more of the following areas:

General and Product Liability. We provide reinsurance of various third party liability coverages to both small and large insureds in both commercial and personal lines predominantly on an excess-of-loss basis. This business includes coverage of commercial, farmowners and homeowners policies as well as third party liability coverages such as product liability.

Professional Liability. We write reinsurance contracts covering professional liability programs, including directors and officers, employment practices, and errors and omissions for professionals such as accountants, lawyers, medical professionals, architects and engineers. The underlying insurance products for these lines of business are generally written on a claims made basis, which requires notification of claims related to the liabilities insured under the policy to be submitted to the insurer during a specified coverage period.

Accident and Health. We provide accident and health reinsurance, most often covering employer self-insured or fully insured health plans, on a quota share and excess-of-loss basis. We also write reinsurance of student health insurance, sports disability, Medicare and Medicare supplement and other forms of accident and health insurance.

Umbrella Liability. We provide reinsurance of umbrella policies, which are excess insurance policies that provide coverage, typically for general liability or automobile liability, when claims, individually or in the aggregate, exceed the limit of the original policy underlying the excess policy.

Workers' Compensation. We reinsure workers' compensation on a catastrophic basis as well as on a per-claimant basis. We may provide full statutory coverage or coverage that is subject to specific carve-outs. Our exposure to workers' compensation would generally arise from a single occurrence, such as a factory explosion or earthquake, involving claims from more than one employer.

Casualty Clash. We provide casualty clash reinsurance, which covers losses arising from a single event insured under more than one policy or where there are multiple claimants under one policy. This type of reinsurance is analogous to property catastrophe reinsurance, but written for casualty lines of business.

Automobile Liability. We provide automobile liability reinsurance, which relates to the risks associated with the insured's vehicle and third party coverage for the insured's liability to other parties for injuries, for damage to the insured's property due to the use of the insured vehicle and coverage for uninsured motorists and medical payments.

Surety. We reinsure risks associated with commercial and contract surety bonds issued to third parties to guarantee the performance of an obligation by the principal under the bond. Commercial bonds guarantee compliance with obligations arising out of regulatory or statutory requirements. Contract bonds guarantee the performance of contractual obligations between two parties and include payment and performance bonds.

Trade Credit. Trade credit insurance is purchased by companies to ensure that invoices for goods and services provided to their customers are paid on time. We provide trade credit reinsurance for financial losses sustained through the failure of an insured's customers to pay for goods or services supplied to them.

Political Risk. Political risk reinsurance covers the impairment of assets as a result of expropriation, political violence, currency inconvertibility, and the failure by sovereign countries to honor their obligations. The locations of risks that we reinsure include Asia, Central and Eastern Europe, Latin America, Africa and the Middle East.

Finite Risk

Finite risk reinsurance, often referred to as non-traditional reinsurance, includes principally structured reinsurance contracts with ceding companies whose needs may not be met efficiently through traditional reinsurance products. Reinsurance contracts classified as finite risk are typically structured to include loss limitation or loss mitigation features. In exchange for contractual features that limit our risk, these reinsurance contracts typically provide the potential for a significant profit commission to the ceding company. The classes of risks underwritten through our finite risk contracts are generally consistent with the classes covered by our traditional products. The finite risk reinsurance contracts that we underwrite generally provide prospective protection, meaning coverage is provided for losses that are incurred after inception of the contract, as contrasted with retrospective coverage, which covers losses that are incurred prior to inception of the contract. The three main categories of our finite risk reinsurance contracts are quota share, multi-year excess-of-loss and whole account aggregate stop loss:

Finite quota share. Under finite quota share reinsurance contracts, the reinsurer agrees to indemnify a ceding company for a percentage of its losses up to an aggregate maximum or cap in return for a percentage of the ceding company's premium, less a ceding commission. The expected benefit to the ceding company provided by finite quota share reinsurance is increased underwriting capacity of the ceding company and a sharing of premiums and losses with the reinsurer. These reinsurance contracts often provide broad protection and may cover multiple classes of a ceding company's business. Unlike traditional quota share reinsurance agreements, these contracts often provide for profit commissions which take into account investment income for purposes of calculating the reinsurer's profit on business ceded. Additionally, finite quota share reinsurance contracts are often written on a funds withheld basis, meaning the parties agree that funds that would normally be remitted to a reinsurer are withheld by the ceding company. The funds withheld are generally credited with interest at a negotiated rate and the net balances are settled generally after expiration at a date established in the contract.

Multi-year excess-of-loss. These reinsurance contracts often complement ceding companies' traditional excess-of-loss reinsurance programs. This type of contract often carries an up-front premium plus additional premiums which are dependent on the magnitude of losses claimed by the ceding company under the contract. The expected benefit to the ceding company on multi-year excess-of-loss reinsurance is that the ceding company has the ability to negotiate specific terms and conditions that remain applicable over multiple years of coverage. These reinsurance contracts may cover multiple classes of a ceding company's business and typically provide the benefit of reducing the impact of large or catastrophic losses on a ceding company's underwriting results. In general, these

reinsurance contracts are designed so that the ceding company funds the expected level of loss activity over the multi-year period. The reinsurer incorporates a profit margin to cover its costs and a charge for the risk that actual losses assumed may be worse than expected. The payment of premiums based on the magnitude of losses claimed is intended to benefit the ceding company by linking its own loss experience to the actual cost of reinsurance over time. The multiple year term and premium structure of multi-year excess-of-loss reinsurance contracts are not typically found in traditional reinsurance contracts.

Whole account aggregate stop loss. Aggregate stop loss reinsurance contracts provide broad protection against a wide range of contingencies that are difficult to address with traditional reinsurance, including inadequate pricing by a ceding company or higher frequency of claims than the ceding company expected. The reinsurer on a whole account aggregate stop loss contract agrees to indemnify a ceding company for aggregate losses in excess of a deductible specified in the contract. These contracts can be offered on a single or multi-year basis, and may provide catastrophic and attritional loss protection. The benefit of whole account aggregate stop loss contracts to ceding companies is that such contracts provide the broadest possible protection of a ceding company's underwriting results which is not generally available in the traditional reinsurance market. Unlike traditional reinsurance contracts, these contracts often contain sub-limits of coverage for losses on certain classes of business or exposures and often include provisions for profit commissions which take into account investment income for purposes of calculating the reinsurer's profit on business ceded. Additionally, these reinsurance contracts may be written on a funds withheld basis.

Marketing

We market our reinsurance products worldwide primarily through non-exclusive relationships with leading reinsurance brokers, as we believe that the use of reinsurance brokers enables us to operate on a more cost-effective basis and to maintain the flexibility to enter and exit reinsurance lines in a quick and efficient manner. We also believe that brokers are particularly useful in assisting with placements of excess-of-loss reinsurance programs. In addition to their role as intermediaries in placing risk, brokers perform data collection, contract preparation and other administrative tasks. We believe that by doing business largely through reinsurance brokers we are able to avoid the expense and regulatory complications of a worldwide network of offices and thereby minimize fixed costs associated with marketing activities.

Based on in-force premiums written by us as of December 31, 2010, the brokers from which we derived the largest portions of our business (with the approximate percentage of business derived from each of such brokers and its affiliates) were: Aon Benfield (37.5%), Marsh & McLennan Companies (32.6%), and Willis Group Holdings (16.5%). The loss of business relationships with any of these brokers could have a material adverse effect on our business.

Underwriting and Risk Management

Overview

Our approach to underwriting and risk management emphasizes discipline and profitability rather than premium volume or market share. We seek to limit our overall exposure to risk by limiting the amount of reinsurance we write by geographic zone, peril and type of program or contract. Our risk management practices include evaluating the quality of the ceding company in connection with our review of a program proposal and using contract terms, diversification criteria, probability analysis and analysis of comparable historical loss experience. We estimate the impact of catastrophic events using information from ceding companies, reinsurance contract information, expected loss ratios, our historical loss ratios, industry loss data and catastrophe modeling software to evaluate our exposure to losses from individual contracts and in the aggregate.

Ceding Company Selection and Underwriting Evaluation

Before entering into a reinsurance contract, we consider the quality of the ceding company, including the experience and reputation of its management, its capital, its risk management and underwriting strategy and practices and its claims settlement practices and procedures. In addition, we seek to obtain information on the nature of the perils to be covered and, in the case of natural peril catastrophe exposures, aggregate information as to the location or locations of the risks covered under the reinsurance contract. We request information on the ceding company's loss history for the perils proposed to be covered, together with relevant underwriting considerations, which would impact our exposures. If the program meets all these initial underwriting criteria, we then evaluate the proposal's risk/reward profile to assess the adequacy of the proposed pricing and its potential impact on our overall return on capital.

Loss Limits

Reinsurance contracts generally contain limits that restrict the amount that we may be required to pay in the event of a loss. These limits may apply on a per risk, per occurrence, or aggregate basis. Contracts with per risk limits include a limit on our liability for each underlying insured. If multiple underlying insureds are affected by a single event, our total limit of liability, without any other mitigating contractual terms, would be the sum of the per risk limits for all the underlying insureds affected by the event. Per occurrence limits restrict our liability to a certain amount for each event, regardless of the number of underlying insureds involved. If multiple events occur in a single reinsurance

policy period, our total limit of liability, without any other mitigating contractual terms, would be the sum of the occurrence limits for all events within the policy term. Aggregate limits provide us with a maximum amount for which we are liable, in total, for all underlying risks and all occurrences combined within the coverage period.

Our contracts typically contain a per risk limit or an occurrence limit and may contain both. Some of our contracts contain an aggregate limit. Property and marine reinsurance contracts with natural catastrophe exposure generally contain occurrence limits. In addition, our high layer property and marine reinsurance contracts generally contain aggregate limits. Casualty reinsurance contracts generally contain either a per risk or an occurrence limit. Casualty clash contracts generally contain an aggregate limit. Few of our other casualty contracts contain an aggregate limit.

Loss Modeling and Monitoring

For catastrophe coverages exposed to natural perils, we measure our exposure to aggregate catastrophic claims using catastrophe models that analyze the effect of wind speed and earthquakes on the exposed property values within our portfolio. We seek to limit the amount of capital that we expect to lose from a severe catastrophic event; however, there can be no assurance that we will successfully limit actual losses from such a catastrophic event.

We use sophisticated modeling techniques to measure and estimate loss exposure under both simulated and actual loss scenarios. We also use these models to assess the impact of both single and multiple events. We evaluate the commercial catastrophe exposure models that form the basis for our own proprietary pricing models. These computer-based loss modeling systems primarily utilize direct exposure information obtained from our clients and data compiled by A.M. Best to assess each client's potential for catastrophe losses. We believe that loss modeling is an important part of the underwriting process for catastrophe exposure pricing.

We maintain a database of our exposure in each geographic zone and estimate our probable maximum loss for each zone and for each peril (e.g. earthquakes and hurricanes) to which that zone is subject based on catastrophe models and underwriting assessments. We also use catastrophe loss modeling to review exposures from events that cross country borders, such as wind events that may affect the Caribbean and Florida or the United Kingdom and continental Europe. Our largest exposures are in the United States for hurricane and earthquake, in Europe for flood and wind, and in Japan for earthquake and typhoons.

In respect of our property catastrophe exposure, we seek to limit our estimated probable maximum loss to a specific level for severe catastrophic events. We currently expect to limit the probable maximum pre-tax loss for 2011 to no more than 22.5% of total capital for a severe catastrophic event in any geographic zone that could be expected to occur once in every 250 years, although we may change this threshold at any time. The estimated probable maximum loss for a catastrophic event in any geographic zone arising from a 1-in-250 year event was approximately \$396.0 million, or 18.5% of total capital, and \$469.0 million, or 20.1% of total capital, as of January 1, 2011 and January 1, 2010, respectively.

We also monitor our exposures to accumulating risks for man-made perils impacting coverage such as surety, umbrella liability, directors and officers' liability, trade credit and terrorism.

Diversification

We seek to diversify our property catastrophe exposure across geographic zones and type of peril around the world in order to manage the concentration of risk. We attempt to limit our coverage for risks located in a particular zone to a predetermined level. Currently, our largest property exposures are in Florida and other coastal states in the United States, and in the Caribbean, Japan, and northern Europe.

We seek to diversify our casualty exposure by writing casualty business throughout the United States and internationally. In addition, we seek to diversify our casualty exposure by writing casualty reinsurance across a broad range of product lines.

Retrocessional Reinsurance and Derivative Instruments

We buy retrocessional reinsurance, which is insurance for our own account, to reduce liability on individual risks, protect against catastrophic losses and obtain additional underwriting capacity. Our decisions with respect to purchasing retrocessional coverage take into account both the potential coverage and market conditions such as pricing, terms, conditions and availability of such coverage, with the aim of securing cost-effective protection. We may purchase industry loss warranty reinsurance, which provides retrocessional coverage when insurance industry losses for a defined event exceed a certain level. We expect that the type and level of retrocessional coverage we purchase will vary over time, reflecting our view of the changing dynamics of both the underlying exposure and the reinsurance markets. There can be no assurance that retrocessional coverage will be available on terms we find acceptable.

Retrocessional agreements do not relieve us from our obligations to the insurers and reinsurers from whom we assume business. The failure of retrocessionaires to honor their obligations would result in losses to us. Consequently, we consider the financial strength of retrocessionaires when determining whether to purchase retrocessional coverage from them. We generally obtain retrocessional coverage from companies rated "A-" or better by A.M. Best unless the retrocessionaire's obligations are collateralized. We routinely monitor the financial performance and rating status of all material retrocessionaires.

We may also use derivative instruments to reduce our exposure to catastrophe losses as an alternative to traditional retrocession. The posting of collateral may enhance the financial security of the derivative counterparty.

Claims Administration

Our claims personnel administer claims arising from our reinsurance contracts, including validating and monitoring claims, posting case reserves and approving payments. Authority for establishing reserves and payment of claims is based upon the level and experience of claims personnel.

Our claims personnel, or consultants engaged by us, conduct periodic audits of specific claims and the overall claims procedures of our ceding companies at their offices. We rely on our ability to effectively monitor the claims handling and claims reserving practices of ceding companies in order to help establish the proper reinsurance premium for reinsurance contracts and to establish proper loss estimates and liabilities. Moreover, prior to accepting or renewing certain risks, our underwriters may request that our claims personnel conduct pre-underwriting claims audits of ceding companies.

Unpaid Losses and Loss Adjustment Expenses

Unpaid losses and loss adjustment expenses on our consolidated balance sheets represent our best estimates, at a given point in time, of our liability to pay losses and loss adjustment expenses (“LAE”) for reinsured claims for events that have occurred on or before the balance sheet date. We do not establish liabilities for unpaid losses and LAE until the occurrence of an event that may give rise to a loss.

Estimates of losses and LAE are established after extensive consultation with individual underwriters, actuarial review of loss development patterns and comparison with industry and our own loss information. These estimates are based on predictions of future developments and trends, including predictions of claim severity and frequency. Consequently, estimates of ultimate losses and LAE, and our unpaid liability for losses and LAE, may differ materially from our initial estimates. We report changes in estimates of prior years’ unpaid losses and LAE in our consolidated statement of operations in the period in which we make the change.

The following table sets forth the changes in our liability for unpaid losses and LAE for the years ended December 31, 2010, 2009 and 2008 (\$ in thousands):

	2010	2009	2008
Net unpaid losses and LAE as of January 1,	\$2,335,008	\$2,452,045	\$2,342,185
Net incurred losses and LAE related to:			
Current year	625,250	579,304	878,169
Prior years	(157,830)	(100,962)	(159,936)
Net incurred losses and LAE	467,420	478,342	718,233
Net paid losses and LAE:			
Current year	96,245	67,693	148,355
Prior years	497,968	539,517	433,961
Net paid losses and LAE	594,213	607,210	582,316
Net effects of foreign currency exchange rate changes	251	11,831	(26,057)
Net unpaid losses and LAE as of December 31,	2,208,466	2,335,008	2,452,045
Reinsurance recoverable on unpaid losses and LAE	8,912	14,328	11,461
Gross unpaid losses and LAE as of December 31,	\$2,217,378	\$2,349,336	\$2,463,506

The following table sets forth the components of net incurred losses and LAE related to prior years for the years ended December 31, 2010, 2009 and 2008 (\$ in thousands):

	2010	2009	2008
Net favorable loss development	\$(158,939)	\$(100,793)	\$(167,246)
Effect of changes in premium estimates	14,331	(169)	7,310
Change in unallocated loss adjustment expense reserves	(13,222)	–	–
Net incurred losses and LAE – prior years	\$(157,830)	\$(100,962)	\$(159,936)

Net favorable loss development was primarily the result of favorable adjustments in ultimate loss ratios. Prior years' incurred losses and LAE included losses associated with changes in premium estimates and the patterns of their earnings. The effect on net income of changes in premium estimates, after considering corresponding changes in related losses, LAE and acquisition expenses, was not significant. During the year ended December 31, 2010, we completed a review of our administrative expenses of managing claims that resulted in a \$13.2 million reduction of unallocated loss adjustment expense ("ULAE") reserves.

The net favorable loss development for the year ended December 31, 2010 emerged primarily from the Property and Marine and Casualty segments and was related to non-catastrophe losses. The Property and Marine segment had \$36.9 million of net favorable loss development, including \$53.0 million of net favorable loss development related to non-catastrophe events and net unfavorable loss development of \$16.2 million related to major catastrophe events, primarily Hurricane Ike. The Casualty segment had \$113.3 million of net favorable loss development, of which \$96.4 million was attributable to the long-tailed casualty classes in the 2006 and prior underwriting years. The majority of the long-tailed casualty net favorable loss development was attributable to the claims made, casualty occurrence

excess-of-loss, clash and umbrella classes, partially offset by net unfavorable loss development in the international casualty class in the 2008 underwriting year. The Finite Risk segment experienced net favorable loss development of \$8.8 million, which was substantially offset by adjustments relating to profit commissions on these contracts.

The net favorable loss development for the year ended December 31, 2009 emerged primarily from the Property and Marine and Casualty segments and was related to non-catastrophe losses. The Property and Marine segment had \$14.3 million of net favorable loss development, including \$17.7 million of net favorable loss development related to non-catastrophe events and net unfavorable loss development of \$3.5 million related to major catastrophe events. The Casualty segment had \$73.6 million of net favorable loss development, of which \$68.2 million was attributable to the long-tailed casualty classes. The majority of the long-tailed casualty net favorable loss development was attributable to the umbrella, claims made and casualty occurrence excess-of-loss classes. The Finite Risk segment experienced net favorable loss development of \$12.9 million, which was substantially offset by adjustments relating to profit commissions on these contracts.

There was net favorable loss development for the year ended December 31, 2008 in all segments. The Property and Marine segment had \$71.2 million of net favorable loss development, of which \$18.8 million related to major catastrophe events. The remainder of the net favorable loss development was attributable to non-major catastrophe, property risk and crop classes of business. The Casualty segment had \$73.2 million of net favorable loss development, of which \$63.3 million was attributable to certain long-tailed casualty classes. The majority of the long-tailed casualty net favorable loss development was attributable to the claims made classes. The Finite Risk segment experienced net favorable loss development of \$22.8 million, which was substantially offset by adjustments relating to profit commissions on these contracts.

The net favorable loss development for the years ended December 31, 2010, 2009 and 2008 was primarily attributable to a level of cumulative losses reported by our ceding companies that was lower than expected, and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios and reduce estimated ultimate losses. For additional discussion on changes in loss experience see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations- Critical Accounting Estimates - Variability of Outcomes," in this Form 10-K.

The table below shows the development of the liability for net unpaid losses and LAE from December 31, 2002 through December 31, 2010. The top line of the table shows the liability for unpaid losses and LAE, net of unpaid retrocessional reinsurance recoverables, at the balance sheet date for each of the indicated years. This represents our estimate of our gross and net liability for losses and LAE arising in all prior years that are unpaid at the balance sheet date, including our estimate of the cost of claims incurred but not yet reported, generally referred to as "IBNR." We re-estimate the liability to reflect additional information regarding claims incurred prior to the end of each year. Changes in our estimate of our liability for unpaid losses and LAE recorded at the end of the prior year are reflected in the consolidated statement of operations of the year during which the liabilities are re-estimated and result in a redundancy or deficiency of our unpaid losses and LAE. A cumulative redundancy or deficiency reflects the cumulative difference between the original estimate of our liability for unpaid losses and LAE and the current re-estimated liability.

The table also shows the cumulative amounts paid as of successive years with respect to that liability. Unpaid losses and LAE denominated in foreign currencies are restated at the foreign exchange rates in effect as of December 31, 2010 and the resulting cumulative foreign exchange effect is shown as an adjustment to the cumulative redundancy. Each amount in the table includes the effects of all changes in amounts for the prior years.

The table does not present accident year or underwriting year development data nor does it include any corresponding adjustments that may accompany loss redundancies or deficiencies such as premium or commission adjustments. Conditions and trends that have affected the development of liabilities in the past may not necessarily exist in the future. Therefore, it would not be appropriate to extrapolate future deficiencies or redundancies based on the following table.

Development of Loss and LAE Reserves
(\$ in thousands)

	2002	2003	2004	2005	2006	2007	2008	2009	2010

Investments

As of December 31, 2010, our total investments and cash and cash equivalents totaled \$4.2 billion, consisting of \$3.0 billion of fixed maturity securities, \$987.9 million of cash and cash equivalents and \$176.6 million of short-term investments. See Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations – Financial Condition,” in this Form 10-K for additional discussion and disclosures on our investment and cash position.

The primary objective of our investment strategy is to generate investment income by maintaining a portfolio that consists primarily of diversified, high quality, predominantly investment grade fixed maturity securities. We do not invest in instruments such as credit default swaps or collateralized debt obligations. We may invest in common and preferred stocks and securities denominated in currencies other than the U.S. dollar. In addition, we may use financial futures and options and foreign currency exchange contracts as part of a hedging strategy. From time to time, we may make investments of a strategic or opportunistic nature. We evaluate the expected rate of return of various investment classes over the current risk-free rate of return when determining investment allocations. We also manage the duration of our investment portfolio while considering the duration of our reinsurance and other contractual liabilities.

Our investment guidelines contain limits on the portion of our investment portfolio that may be invested in various investment classes and in the securities of any single issue or issuer, with the exception of U.S. government securities or securities guaranteed by the U.S. Government. We review our investment guidelines periodically.

Our investments are subject to market risks. The principal risks that influence the fair value of our investment portfolio are interest rate risk, credit risk and liquidity risk. See Item 7A, “Quantitative and Qualitative Disclosures about Market Risk,” in this Form 10-K.

The following table summarizes the fair value of our total investments and cash and cash equivalents as of December 31, 2010 and 2009 (\$ in thousands):

	December 31,	
	2010	2009
U.S. Government	\$391,303	\$608,697
U.S. Government agencies	116,450	117,505
Corporate bonds	366,968	477,063
Commercial mortgage-backed securities	203,313	215,020
Residential mortgage-backed securities	166,458	714,703
Asset-backed securities	23,568	59,699
Municipal bonds	1,537,432	759,501
Non-U.S. governments	216,395	678,748
Insurance-linked securities	26,086	25,682
Total fixed maturity securities	3,047,973	3,656,618
Preferred stocks	–	3,897
Short-term investments	176,648	26,350
Total investments	3,224,621	3,686,865
Cash and cash equivalents	987,877	682,784
Total investments and cash and cash equivalents	\$4,212,498	\$4,369,649

U.S. Government agencies consist of securities issued by financial institutions under the Temporary Liquidity Guarantee Program guaranteed by the Federal Deposit Insurance Corporation.

Edgar Filing: PLATINUM UNDERWRITERS HOLDINGS LTD - Form 10-K

As of December 31, 2010 and 2009, our portfolio of fixed maturity securities and preferred stocks had a dollar weighted average rating of Aa2, primarily measured by Moody's Investors Service ("Moody's"). If a particular security does not have a Moody's rating, then a rating from S&P is generally converted to a Moody's equivalent rating.

The following table summarizes the fair values of our fixed maturity securities and preferred stock portfolios as of December 31, 2010 and 2009 by credit quality (\$ in thousands):

Credit Quality	December 31			
	2010		2009	
	Fair Value	% of Total	Fair Value	% of Total
Aaa	\$ 1,219,482	40.0 %	\$ 2,341,963	64.0 %
Aa	1,033,067	33.9 %	517,404	14.1 %
Aa	470,525	15.4 %	404,711	11.1 %
Baa	225,928	7.4 %	315,275	8.6 %
Below Baa	98,971	3.3 %	81,162	2.2 %
Total	\$ 3,047,973	100.0 %	\$ 3,660,515	100.0 %

As of December 31, 2010, there were approximately \$19.9 million of municipal bonds whose ratings of "Aa" included the benefit of guarantees from third-party insurers that would otherwise be rated as "A" without the existence of such guarantees.

We consider the estimated duration of our reinsurance and other contractual liabilities when establishing the target duration of our investment portfolio. Our aggregate cash and invested assets, including accrued investment income and net balances due to and from brokers, had a duration of 4.1 years and 3.5 years as of December 31, 2010 and 2009, respectively.

Valuation

The investment valuation process requires significant judgment and involves analyzing factors specific to each security. Determining the fair value of a security may require obtaining fair value estimates from several sources and establishing a hierarchy based on the reliability of information. The determination of whether unrealized losses represent temporary changes in fair value or were the result of other-than-temporary impairments also involves significant judgment. See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Critical Accounting Estimates - Valuation of Investments," in this Form 10-K.

Competition

The property and casualty reinsurance industry is highly competitive. Some of our competitors are large financial institutions that have reinsurance operations, while others are specialty reinsurance companies. Many of our competitors have greater financial, marketing and management resources than we do. We compete with reinsurers worldwide on the basis of many factors, including premium charges and other terms and conditions offered, services provided, ratings assigned by independent rating agencies, speed of claims payment, claims experience, perceived financial strength and experience and reputation of the reinsurer in the line of reinsurance to be underwritten.

Our principal competitors vary by type of business. Bermuda-based reinsurers are significant competitors on property catastrophe business. Lloyd's of London syndicates are significant competitors on marine business. On international business, large European reinsurers are significant competitors. Large U.S. direct reinsurers, as well as lead U.S.-based broker market reinsurers, are significant competitors on U.S. casualty business. Our competitors include Alterra Capital Holdings Limited, Arch Capital Group Ltd., Aspen Insurance Holdings Limited, Axis Capital Holdings Limited, Endurance Specialty Holdings Ltd., Everest Re Group, Ltd., Flagstone Reinsurance Holdings Limited, Montpelier Re Holdings Ltd., PartnerRe Ltd., RenaissanceRe Holdings Ltd. ("RenaissanceRe"), Transatlantic Holdings, Inc. and Validus Holdings, Ltd.

Traditional as well as new capital market participants from time to time produce alternative products (such as reinsurance securitizations, catastrophe bonds and various derivative instruments, such as swaps) that may compete with certain types of reinsurance, such as property catastrophe. Over time, these initiatives could significantly affect supply, pricing and competition in our industry and partially displace our traditional reinsurance products.

Ratings

Financial strength ratings are used by ceding companies and reinsurance intermediaries to assess the financial strength and quality of reinsurers, and thus are an important factor in evaluating and establishing their competitive positions. Insurer financial strength ratings are current opinions of rating agencies of the financial strength of an insurance organization with respect to its ability to meet obligations under its insurance policies and contracts. A.M. Best and S&P are generally considered to be significant rating agencies for the evaluation of insurance and reinsurance companies. A.M. Best and S&P ratings are based on a quantitative and qualitative evaluation of

performance with respect to capitalization, operating results, business position, financial flexibility, liquidity and enterprise risk management.

A.M. Best has assigned a financial strength rating of “A” (Excellent) with a stable outlook to each of our reinsurance subsidiaries. This rating is the third highest of sixteen rating levels. According to A.M. Best, a rating of “A” indicates A.M. Best’s opinion that a company has an excellent ability to meet its ongoing obligations to policyholders. S&P has assigned a financial strength rating of “A” (Strong) with a stable outlook to each of our reinsurance subsidiaries. This rating is the sixth highest of twenty-one levels. According to S&P, a rating of “A” indicates S&P’s opinion that an insurer has strong financial security characteristics, but is somewhat more likely to be affected by adverse business conditions than are insurers with higher ratings. These ratings are subject to periodic review by A.M. Best and S&P and may be revised downward or revoked at the sole discretion of A.M. Best or S&P. A.M. Best and S&P may increase their scrutiny of rated companies, revise their rating standards or take other action that could lead to changes in our ratings. If A.M. Best or S&P revise their rating standards associated with our current rating, our rating may be downgraded or we may need to raise additional capital to maintain our rating.

Employees

As of December 31, 2010, we employed 144 people.

Regulation

The business of reinsurance is regulated in most countries and by most states in the United States, although the degree and type of regulation varies significantly from one jurisdiction to another. Reinsurers are generally subject to less direct regulation than primary insurers. Reinsurers licensed in the United States and Bermuda are regulated and must comply with financial supervision standards comparable to those governing primary insurers. Platinum Bermuda is based in Bermuda and Platinum US is based in Maryland. Although principally regulated by the regulatory authorities of those jurisdictions, our reinsurance subsidiaries may also be subject to regulation in the jurisdiction of their ceding companies.

Bermuda Regulation

Platinum Holdings and Platinum Bermuda are organized and domiciled in Bermuda. In addition, Platinum Bermuda is registered as an insurer in Bermuda. As a holding company, Platinum Holdings is currently not subject to Bermuda insurance regulations. However, the Insurance Amendment (No. 3) Act 2010 has given the Bermuda Monetary Authority (the “Authority”) the ability to act as a group supervisor of insurance groups and to include any member of an insurance group within its supervision. If the Authority becomes our group supervisor, the Authority may include any of our companies within its group supervision, including Platinum Holdings.

The Insurance Act 1978 of Bermuda and related regulations, as amended (the “Insurance Act”), which regulates the insurance business of Platinum Bermuda, provides that no person may carry on any insurance business in or from within Bermuda unless registered as an insurer under the Insurance Act by the Authority, which is responsible for the day-to-day supervision of insurers. The Insurance Act also grants to the Authority powers to supervise, investigate and intervene in the affairs of insurance companies. Under the Insurance Act, insurance business includes reinsurance business.

An Insurance Advisory Committee appointed by the Bermuda Minister of Finance (the “Minister of Finance”) advises the Authority on matters connected with the discharge of the Authority’s functions, and subcommittees thereof supervise, investigate and review the law and practice of insurance in Bermuda, including reviews of accounting and administrative procedures.

An insurer’s registration may be canceled by the Authority on grounds specified in the Insurance Act, including failure of the insurer to comply with its obligations under the Insurance Act or if, in the opinion of the Authority, the insurer has not been carrying on business in accordance with sound insurance principles. The Insurance Act also imposes solvency and liquidity standards and auditing and reporting requirements on Bermuda insurance companies and grants to the Authority powers to supervise, investigate and intervene in the affairs of insurance companies. Certain significant aspects of the Bermuda insurance regulatory framework are set forth below.

The Insurance Act distinguishes between long-term business and general business. Long-term business consists of life, annuity, accident and disability contracts in effect for not less than five years and certain other types of contracts. General business is any insurance business that is not long-term business. There are six classifications of insurers carrying on general business, with Class 4 insurers subject to the strictest regulation. Platinum Bermuda is registered as both a Class 4 and long-term insurer and is regulated as such under the Insurance Act.

Principal Representative. Platinum Bermuda is required to maintain a principal office in Bermuda and to appoint and maintain a principal representative in Bermuda. For the purpose of the Insurance Act, the principal office of Platinum Bermuda is at our principal executive offices in Bermuda. Without a reason acceptable to the Authority, an insurer may not terminate the appointment of its principal representative, and the principal representative may not cease to act as such, unless 30 days notice in writing is given to the Authority of the intention to do so. It is the duty of the principal representative, upon reaching the view that there is a likelihood of the insurer for which the principal representative acts becoming insolvent or that a reportable “event” has, to the principal representative’s knowledge, occurred or is believed to have occurred, to immediately notify the Authority and to make a report in writing to the Authority within 14 days setting out all the particulars of the case that are available to the principal representative. Examples of such a reportable “event” include failure by the insurer to comply substantially with a condition imposed upon the insurer by the Authority relating to a solvency margin or liquidity or other ratio.

Independent Approved Auditor. Platinum Bermuda must appoint an independent auditor who will annually audit and report on Platinum Bermuda’s financial statements prepared under generally accepted accounting principles or international financial reporting standards (“GAAP financial statements”), statutory financial statements and the statutory financial return of the insurer, each of which, are required to be filed annually with the Authority. The

independent auditor of Platinum Bermuda must be approved by the Authority. No person having an interest in Platinum Bermuda other than as an insured, and no officer, servant or agent of Platinum Bermuda, shall be eligible for appointment as an approved auditor for Platinum Bermuda and any person appointed as an approved auditor to Platinum Bermuda who subsequently acquires such interest or becomes an officer, servant or agent of that insurer shall cease to be an approved auditor. If Platinum Bermuda fails to appoint an approved auditor or at any time fails to fill a vacancy for such auditor, the Authority may appoint an approved auditor for Platinum Bermuda and shall fix the remuneration to be paid to the approved auditor within 14 days, if not agreed sooner by the insurer and the auditor. Platinum Bermuda's independent auditor is KPMG in Bermuda.

Loss Reserve Specialist. Platinum Bermuda is required to submit an opinion of its approved loss reserve specialist relating to general business with its statutory financial return in respect of its loss and LAE provisions. The loss reserve specialist, who will normally be a qualified casualty actuary, must be approved by the Authority.

Approved Actuary. Platinum Bermuda is required to submit an annual actuary's certificate with its statutory financial return. The actuary's certificate must state whether or not (in the opinion of the insurer's approved actuary) the aggregate amount of the liabilities of the insurer in relation to long-term business at the end of the relevant year, exceeds the aggregate amount of those liabilities as shown in the insurer's statutory balance sheet. The actuary must be approved by the Authority and will normally be a qualified life actuary.

Annual Financial Statements. Platinum Bermuda must prepare annual GAAP financial statements and statutory financial statements with respect to its general business and its long-term business. The Insurance Act prescribes rules for the preparation and substance of such statutory financial statements (which include, in statutory form, a balance sheet, an income statement, a statement of capital and surplus and notes thereto). The statutory financial statements include information and analysis regarding premiums, claims, reinsurance and investments of the insurer. Platinum Bermuda is required to file with the Authority the annual GAAP financial statements and statutory financial statements within four months from the end of the relevant financial year (unless specifically extended). The statutory financial statements do not form part of the public records maintained by the Authority but the GAAP financial statements are available for public inspection.

Annual Statutory Financial Return. Platinum Bermuda is required to file with the Authority a statutory financial return no later than four months after its financial year end (unless specifically extended). The statutory financial return for an insurer registered as a Class 4 general business and long-term insurer includes, among other things, a report of the approved independent auditor on the statutory financial statements of such insurer, a general business solvency certificate, a long-term business solvency certificate, the statutory financial statements relating to the general business and the long-term business, the opinion of the loss reserve specialist, an actuary's certificate, a declaration of the statutory ratios and a schedule of reinsurance ceded. The solvency certificates must be signed by the principal representative and at least two directors of the insurer who are required to certify, among other matters, whether the minimum solvency margin has been met and whether the insurer complied with the conditions attached to its certificate of registration. The approved independent auditor is required to state whether in its opinion it was reasonable for the directors to so certify. Where an insurer's accounts have been audited for any purpose other than compliance with the Insurance Act, a statement to that effect must be filed with the statutory financial return. The statutory financial return is not available for public inspection.

Minimum Solvency Margin, Enhanced Capital Requirement and Restrictions on Dividends and Distributions. Platinum Bermuda must at all times maintain a minimum solvency margin and an enhanced capital requirement in accordance with the provisions of the Insurance Act.

As a Class 4 insurer and long-term insurer, Platinum Bermuda is required (1) with respect to its general business, to maintain a minimum solvency margin equal to the greater of (A) \$100 million, (B) 50% of net premiums written (being gross premiums written less any premiums ceded by Platinum Bermuda but Platinum Bermuda may not deduct more than 25% of gross premiums when computing net premiums written), and (C) 15% of net discounted aggregate losses and loss expense provisions and other insurance reserves; and (2) with respect to its long-term business, to maintain a minimum solvency margin of \$250,000.

Each year Platinum Bermuda is required to file with the Authority a capital and solvency return within four months of its relevant financial year end (unless specifically extended). The prescribed form of capital and solvency return comprises the insurer's Bermuda Solvency Capital Requirement ("BSCR") model, a schedule of fixed income investments by rating category, a schedule of net loss and loss expense provision by line of business, a schedule of premiums written by line of business, a schedule of risk management and a schedule of fixed income securities.

As a Class 4 insurer and long-term insurer, Platinum Bermuda is required to maintain available statutory capital and surplus in an amount that is equal to or exceeds the target capital levels based on enhanced capital requirements ("ECR") calculated using the BSCR model. The Authority has provided for the use of pre-approved internally developed company models in lieu of the standardized BSCR. The BSCR model is a risk-based capital model introduced by the Authority that measures risk and determines ECR and a target capital level (defined as 120% of the ECR) based on Platinum Bermuda's statutory financial statements. In circumstances where the Authority concludes that the company's risk profile deviates significantly from the assumptions underlying the ECR or the company's assessment of its management policies and practices, it may issue an order requiring that the company adjust its ECR.

The BSCR increases the capital requirements of Platinum Bermuda and adds an additional constraint on the amount of dividends that Platinum Bermuda is able to pay without regulatory approval.

The Insurance Act mandates certain actions and filings with the Authority if Platinum Bermuda fails to meet and maintain its ECR or solvency margin, including the filing of a written report detailing the circumstances giving rise to the failure and the manner and time within which the insurer intends to rectify the failure. Platinum Bermuda is prohibited from declaring or paying a dividend if it is in breach of its ECR, solvency margin or minimum liquidity ratio or if the declaration or payment of such dividend would cause such breach. Where Platinum Bermuda fails to meet its solvency margin or minimum liquidity ratio on the last day of any financial year, it is prohibited from declaring or paying any dividends during the next financial year without the approval of the Authority. Further, Platinum Bermuda, as a Class 4 insurer, is prohibited from declaring or paying in any financial year dividends of more than 25% of its total statutory capital and surplus (as shown on its previous financial year's statutory balance sheet) unless it files (at least seven days before payment of such dividends) with the Authority an affidavit stating that it will continue to meet its solvency margin or minimum liquidity ratio. Platinum Bermuda must obtain the Authority's prior approval for a reduction by 15% or more of the total statutory capital as set forth in its previous year's statutory financial statements. These restrictions on declaring or paying dividends and distributions under the Insurance Act are in addition to those under the Companies Act 1981, which apply to all Bermuda companies.

All Bermuda companies must comply with the provisions of the Companies Act 1981 regulating the payment of dividends and making distributions from contributed surplus. A company may not declare or pay a dividend, or make a distribution out of contributed surplus, if there are reasonable grounds for believing that: (a) the company is, or would after the payment be, unable to pay its liabilities as they become due; or (b) the realizable value of the company's assets would thereby be less than the aggregate of its liabilities and its issued share capital and share

premium accounts.

Re-Classification of Long-Term Insurers. The Bermuda Insurance Amendment (No. 3) Act 2010 creates five new classes of long-term insurers (being Classes A to E), with Class E insurers expected to be subject to the strictest regulation. Prior to September 30, 2011, Platinum Bermuda will be required to apply to be re-registered as either a Class C, Class D, or Class E insurer, with the Class being determined based upon the total long-term assets of Platinum Bermuda. It is anticipated that, in due course, each Class C, Class D and Class E long-term insurer, including Platinum Bermuda, will be required to maintain total statutory capital and surplus equal to or exceeding its target capital level based on enhanced capital requirements calculated using a risk-based capital model currently being developed by the Authority for long-term insurers. Platinum Bermuda will also be subject to a new minimum margin of solvency, based on its re-classification as a Class C, Class D or Class E insurer as described above. The minimum margin of solvency will be the greater of:

- \$0.5 million or 1.5% of long-term assets for Class C insurers;
- \$4.0 million or 2% of the first \$250.0 million of long-term assets plus 1.5% of long-term assets above \$250.0 million for Class D insurers; and
- \$8.0 million or 2% of the first \$500.0 million of long-term assets plus 1.5% of long-term assets above \$500.0 million for Class E insurers.

Minimum Liquidity Ratio. The Insurance Act provides a minimum liquidity ratio for general business insurers. An insurer engaged in general business is required to maintain the value of its relevant assets at not less than 75% of the amount of its relevant liabilities. Relevant assets include cash and time deposits, quoted investments, unquoted bonds and debentures, first liens on real estate, investment income due and accrued, accounts and premiums receivable and reinsurance balances receivable. There are certain categories of assets which, unless specifically permitted by the Authority, do not automatically qualify as relevant assets, such as unquoted equity securities, investments in and advances to affiliates and real estate and collateral loans. The relevant liabilities are total general business insurance reserves and total other liabilities less deferred income tax and sundry liabilities (by interpretation, those not specifically defined).

Long-term Business Fund. An insurer carrying on long-term business is required to keep its accounts in respect of its long-term business separate from any accounts kept in respect of any other business. All receipts of its long-term business form part of its long-term business fund. No payment may be made directly or indirectly from an insurer's long-term business fund for any purpose other than a purpose related to the insurer's long-term business, unless such payment can be made out of any surplus (certified by the insurer's approved actuary) to be available for distribution otherwise than to policyholders. Platinum Bermuda may not declare or pay a dividend to any person other than a policyholder unless the value of the assets in its long-term business fund (as certified by its approved actuary) exceeds the liabilities of the insurer's long-term business (as certified by the insurer's approved actuary) by the amount of the dividend and at least the \$250,000 minimum solvency margin prescribed by the Insurance Act, and the amount of any such dividend may not exceed the aggregate of that excess (excluding the said \$250,000) and any other funds properly available for payment of dividends, such as funds arising out of business of the insurer other than long-term business.

Restrictions on Transfer of Business and Winding-Up. As a long-term insurer, Platinum Bermuda is subject to the following provisions of the Insurance Act:

- (1) all or any part of the long-term business, other than long-term business that is reinsurance business, may be transferred only with and in accordance with the sanction of the applicable Bermuda court; and
- (2) an insurer or reinsurer carrying on long-term business may only be wound-up or liquidated by order of the applicable Bermuda court, and this may increase the length of time and costs incurred in the winding-up of Platinum Bermuda when compared with a voluntary winding-up or liquidation.

Supervision and Intervention. The Authority may appoint an inspector with powers to investigate the affairs of an insurer if the Authority believes that an investigation is required in the interest of the insurer's policyholders or potential policyholders. In order to verify or supplement information otherwise provided to the inspector, the Authority may direct an insurer to produce documents or information relating to matters connected with the insurer's business.

An inspector may examine on oath any past or present officer, employee or insurance manager of the insurer under investigation in relation to its business and apply to the court in Bermuda for an order that other persons may also be examined on any matter relevant to the investigation. It shall be the duty of any insurer in relation to whose affairs an inspector has been appointed and of any past or present officer, employee or insurance manager of such insurer, to produce to the inspector on request all books, records and documents relating to the insurer under investigation which are in its or his custody or control and otherwise to give to the inspector all assistance in connection with the investigation which it or he is reasonably able to give.

If it appears to the Authority that there is a risk of the insurer becoming insolvent, or that it is in breach of the Insurance Act or any conditions imposed upon its registration, the Authority may, among other things, direct the insurer (i) not to take on any new insurance business, (ii) not to vary any insurance contract if the effect would be to increase the insurer's liabilities, (iii) not to make certain investments, (iv) to realize certain investments, (v) to maintain, or transfer to the custody of a specified bank, certain assets, (vi) not to declare or pay any dividends or other distributions or to restrict the making of such payments, (vii) to limit its premium income, (viii) not to enter into any specified transaction with any specified persons or persons of a specified class, (ix) to provide such written particulars relating to the financial circumstances of the insurer as the Authority thinks fit, (x) to obtain the opinion of a loss reserve specialist and to submit it to the Authority and (xi) to remove a controller or officer.

In addition to powers under the Insurance Act to investigate the affairs of an insurer, the Authority may require certain information from an insurer (or certain other persons) to be produced to the Authority. Further, the Authority has been given powers to assist other regulatory authorities, including foreign insurance regulatory authorities, with their

investigations involving insurance and reinsurance companies in Bermuda but subject to restrictions. For example, the Authority must be satisfied that the assistance being requested is in connection with the discharge of regulatory responsibilities of the foreign regulatory authority. Further, the Authority must consider whether cooperation is in the public interest. The grounds for disclosure are limited and the Insurance Act provides for sanctions for breach of the statutory duty of confidentiality.

Code of Conduct. Platinum Bermuda is subject to the Insurance Code of Conduct (the “Code of Conduct”), promulgated by the Authority, which establishes duties and standards that must be complied with by all insurers registered under the Insurance Act, including the procedures and sound principles to be observed by such insurers. The Code of Conduct became effective on July 1, 2010 and includes a transition period through July 1, 2011. Failure to comply with the Code of Conduct will be a factor taken into account by the Authority in determining whether an insurer is conducting its business in a sound and prudent manner as prescribed by the Insurance Act and could result in the Authority exercising its powers of intervention (see “Supervision and Intervention” above) and will be a factor in calculating the operational risk charge applicable in accordance with that insurer’s BSCR model.

Certain Other Bermuda Law Considerations. All Bermuda “exempted companies” are exempt from certain Bermuda laws restricting the percentage of share capital that may be held by non-Bermudians. However, exempted companies may not participate in certain business transactions, including (i) the acquisition or holding of land in Bermuda except that required for their business and held by way of lease or tenancy for terms of not more than 50 years or, with the consent of the Minister of Finance, land which is used to provide accommodation or recreational facilities for officers and employees of the Company for a term not exceeding 21 years, (ii) the taking of mortgages on land in Bermuda to secure an amount in excess of \$50,000 without the consent of the Minister of Finance, (iii) the acquisition of any bonds or debentures secured by any land in Bermuda, other than certain types of Bermuda government securities or securities issued by Bermuda public authorities or, (iv) the carrying on of business of any kind in Bermuda, except in furtherance of our business carried on outside Bermuda or under license granted by the Minister of Finance. Generally, it is not permitted without a special license granted by the Minister of Finance to insure Bermuda domestic risks or risks of persons of, in or based in Bermuda although the reinsurance of risks undertaken by any company incorporated in Bermuda and authorized to engage in insurance and reinsurance business is permitted.

Although Platinum Bermuda is organized, registered and domiciled in Bermuda, it is classified as a non-resident of Bermuda for exchange control purposes by the Authority. Pursuant to its non-resident status, Platinum Bermuda may hold any currency other than Bermuda dollars and convert that currency into any other currency (other than Bermuda dollars) without restriction. Platinum Bermuda is permitted to hold Bermuda dollars to the extent necessary to pay its expenses in Bermuda.

The Bermuda government actively encourages foreign investment in “exempted” entities like Platinum Holdings that are based in Bermuda but do not operate in competition with local businesses. As well as having no restrictions on the degree of foreign ownership, Platinum Holdings and Platinum Bermuda are not currently subject to taxes on income or dividends or to any foreign exchange controls in Bermuda. In addition, currently there is no capital gains tax in Bermuda.

U.S. Regulation

Platinum US is organized, licensed and domiciled in the State of Maryland, as a property and casualty insurer, and is licensed, authorized or accredited to write reinsurance in all 50 states of the United States and the District of Columbia. Although Platinum US is regulated by state insurance departments and applicable state insurance laws in each state where it is licensed, authorized or accredited, the principal insurance regulatory authority of Platinum US is the Maryland Insurance Administration.

U.S. Insurance Holding Company Regulation of Platinum Holdings, Platinum Regency and Platinum Finance. Platinum Holdings and Platinum Regency as the indirect parent companies of Platinum US, and Platinum Finance as the direct parent company of Platinum US, are subject to the insurance holding company laws of Maryland. These laws generally require an authorized insurer that is a member of a holding company system to register with the Maryland Insurance Administration and to furnish annually financial and other information about the operations of companies within the holding company system. Generally, all transactions between Platinum US and another company in the holding company system, including sales, loans, reinsurance agreements and service agreements, must be fair and reasonable and, if material or of a specified category, require prior notice and approval or non-disapproval by the Maryland Insurance Commissioner (the “Commissioner”).

The insurance laws of Maryland prohibit any person from acquiring control of Platinum Holdings, Platinum Regency, Platinum Finance or Platinum US unless that person has filed a notification with specified information with the Commissioner and has obtained the Commissioner’s prior approval. Under the Maryland statutes, acquiring 10% or more of the voting stock of an insurance company or its parent company is presumptively considered a change of control, although such presumption may be rebutted. Accordingly, any person or entity that acquires, directly or indirectly, 10% or more of the voting securities of Platinum Holdings without the prior approval of the Commissioner will be in violation of these laws and may be subject to injunctive action requiring the disposition or seizure of those securities by the Commissioner or prohibiting the voting of those securities, or to other actions that may be taken by the Commissioner. In addition, many U.S. state insurance laws require prior notification to state insurance departments of a change in control of a non-domiciliary insurance company doing business in that state. While these pre-notification statutes do not authorize the state insurance departments to disapprove the change in control, they authorize regulatory action in the affected state if particular conditions exist, such as undue market concentration. In addition, any transactions that would constitute a change in control of Platinum Holdings, Platinum Regency or Platinum Finance may require prior notification in those states that have adopted pre-acquisition notification laws. These laws may discourage potential acquisition proposals and may delay, deter or prevent a change in control of Platinum Holdings (in particular through an unsolicited transaction), even if the shareholders of Platinum Holdings might consider such transaction to be desirable.

U.S. Insurance Regulation of Platinum US. The rates, forms, terms and conditions of our reinsurance agreements generally are not subject to regulation by any state insurance department in the United States. This contrasts with primary insurance where the policy forms and premium rates are generally closely regulated by state insurance departments.

State insurance authorities have broad administrative powers with respect to various aspects of the reinsurance business, including licensing to transact business, admittance of assets, establishing reserve requirements and solvency standards, and regulating investments and dividends. State insurance laws and regulations require Platinum US to file statutory basis financial statements with insurance departments in each state where it is licensed, authorized or accredited to do business. The operations of Platinum US are subject to examination by those state insurance departments at any time. Platinum US prepares and files statutory basis financial statements in accordance with accounting practices prescribed or permitted by these insurance departments. State insurance departments conduct periodic examinations of the books and records of insurance companies domiciled in their states as well as perform market conduct examinations of insurance companies doing business in their states. State insurance departments generally conduct their various examinations at least once every three to five years. Examinations are generally carried out in cooperation with the insurance departments of other states under guidelines promulgated by the National Association of Insurance Commissioners ("NAIC").

Under Maryland insurance law, Platinum US must give ten days' prior notice to the Commissioner of its intention to pay any dividend or make any distribution other than an extraordinary dividend or extraordinary distribution. The Commissioner has the right to prevent payment of such a dividend or such a distribution if the Commissioner determines, in the Commissioner's discretion, that after the payment thereof, the policyholders' surplus of Platinum US would be inadequate or could cause Platinum US to be in a hazardous financial condition. Platinum US must give at least 30 days' prior notice to the Commissioner before paying an extraordinary dividend or making an extraordinary distribution out of earned surplus. Extraordinary dividends and extraordinary distributions are dividends or distributions which, together with any other dividends and distributions paid during the immediately preceding twelve-month period, would exceed the lesser of:

- (1) 10% of statutory policyholders' surplus (as determined under statutory accounting principles) as of December 31 of the prior year; or
- (2) net investment income excluding realized capital gains (as determined under statutory accounting principles) for the twelve-month period ending on December 31 of the prior year and pro rata distribution of any class of securities of Platinum US, plus any amounts of net investment income (excluding realized capital gains) in the three calendar years prior to the preceding year which have not been distributed.

The NAIC uses a risk-based capital (“RBC”) model to monitor and regulate the solvency of licensed life, health, and property and casualty insurance and reinsurance companies. Maryland has adopted the NAIC’s model law. The RBC calculation is used to measure an insurer’s capital adequacy with respect to: the risk characteristics of the insurer’s premiums written and unpaid losses and LAE, rate of growth and quality of assets, among other measures. Depending on the results of the RBC calculation, insurers may be subject to varying degrees of regulatory action depending upon the level of their capital inadequacy. The statutory capital of Platinum US is above the level that would require any regulatory or corrective action or reporting.

The ability of a primary insurer to take credit for the reinsurance purchased from reinsurance companies is a significant component of reinsurance regulation. Typically, a primary insurer will only enter into a reinsurance agreement if it can obtain credit to its reserves on its statutory basis financial statements for the reinsurance ceded to the reinsurer. With respect to U.S. domiciled reinsurers that reinsure U.S. insurers, credit is usually granted when the reinsurer is licensed or accredited in a state where the primary insurer is domiciled or, in some instances, in a state in which the primary insurer is licensed. States also generally permit primary insurers to take credit for reinsurance if the reinsurer is (i) domiciled in a state with a credit for reinsurance law that is substantially similar to the standards in the primary insurer’s state of domicile, and (ii) meets certain financial requirements. Credit for reinsurance purchased from a reinsurer that does not meet the foregoing conditions is generally allowed to the extent that such reinsurer secures its obligations with qualified collateral. Some states impose requirements that make it difficult to become licensed or accredited as a reinsurer.

Platinum Bermuda has provided, and may in the future provide, reinsurance to Platinum US in the normal course of business. Platinum Bermuda is not licensed, accredited or approved in any state in the United States and, consequently, Platinum Bermuda must collateralize its obligations to Platinum US in order for Platinum US to obtain credit to its reserves on its statutory basis financial statements.

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the “Dodd-Frank Act”) provides that, effective July 21, 2011, only the state in which a primary insurer is domiciled may regulate the financial statement credit for reinsurance taken by that primary insurer; other states will no longer be able to require additional collateral from unauthorized reinsurers or otherwise impose their own credit for reinsurance laws on primary insurers that are only licensed in such other states.

The Dodd-Frank Act also creates the Federal Insurance Office (the “FIO”) within the Department of Treasury headed by a Director to be appointed by the Treasury Secretary. Under the Dodd-Frank Act, the Treasury Secretary and U.S. Trade Representative are jointly authorized to enter into agreements with foreign governments relating to the recognition of prudential measures with respect to the business of insurance or reinsurance. In implementing such agreements, the FIO will have the authority to preempt state law if it is determined that the state law is inconsistent with the international agreement and treats a non-U.S. insurer or reinsurer less favorably than a U.S. insurer or reinsurer. The FIO’s implementation authority over international agreements could potentially result in the preemption of contrary state law, and this authority might be used to affect reinsurance collateral requirements, to the potential benefit of Platinum Bermuda. It is unknown whether and when any such changes will occur.

In December 2008, the NAIC formally adopted the NAIC Reinsurance Regulatory Modernization Framework proposal (the “Framework”). Under the Framework, the level of required collateral for a participating reinsurer would depend upon the reinsurer’s security rating and would range from 0% to 100% of gross assumed liabilities. In 2010, Florida became the first state in the U.S. to implement a state-based approach to credit for reinsurance reform, building on the work of the NAIC and the credit for reinsurance provisions in the Dodd-Frank Act. New York adopted amendments, effective January 1, 2011, to its credit for reinsurance requirements that are similar to the Florida reform. Qualified unauthorized reinsurers that satisfy certain minimum rating and capital requirements and other conditions may apply to the insurance departments of those states for approval to post less than the 100%

collateral otherwise required. Legislation similar to these reforms was also introduced in New Jersey in 2010. It is unclear whether this legislation will be enacted or whether other states will propose and adopt similar reforms to their reinsurance collateral requirements. It is anticipated that states that adopt such reforms will preserve their accredited status with the NAIC for solvency regulation purposes, based on recommendations the NAIC adopted in 2010. Platinum Bermuda will continue to monitor these developments and may consider whether to seek approval to post reduced collateral in one or more states.

In December 2010, the NAIC adopted amendments to the Model Insurance Holding Company System Regulatory Act and Regulation (the "Amended Model Act and Regulation"). The Amended Model Act and Regulation introduce the concept of "enterprise risk" within an insurance holding company system. If and when adopted by a particular state, the Amended Model Act and Regulation would impose more extensive informational requirements on parents and other affiliates of licensed insurers or reinsurers with the purpose of protecting them from enterprise risk, including requiring an annual enterprise risk report by the ultimate controlling person identifying the material risks within the insurance holding company system that could pose enterprise risk to the licensed companies. The Amended Model Act and Regulation must be adopted by the individual states for the new requirements to apply to U.S. domestic insurers and reinsurers, and specifically in Maryland for the changes to apply to Platinum US. It is not clear if and when Maryland or other states will adopt these changes; however, it is anticipated that the NAIC will seek to make the amendments part of its accreditation standards for state solvency regulation, which would motivate states to adopt the amendments promptly.

In addition to reinsurance collateral and insurance holding company system reforms, government involvement in the insurance and reinsurance markets, both in the United States and worldwide, continues to evolve. For example, in 2007, Florida enacted legislation that, among other things, increased the access of primary Florida insurers to the Florida Hurricane Catastrophe Fund ("FHCF"). The purpose of the FHCF is to maintain insurance capacity in Florida by providing below market rate reinsurance to insurers for a portion of their catastrophic hurricane losses. The legislation may have the effect of reducing the role of the private reinsurance market in Florida-based risks. The Florida legislation and any similar state or U.S. federal legislation could have a material adverse impact on our business, financial condition or results of operations.

The U.S. federal government generally does not directly regulate the insurance industry except for certain areas of the market, such as insurance for crop, flood, nuclear and terrorism risks. However, the federal government has undertaken initiatives or considered legislation in several areas that may impact the reinsurance industry, including tort reform, corporate governance and the taxation of reinsurance companies. In addition, legislation has been introduced from time to time in recent years that, if enacted, could result in the federal government assuming a more direct role in the regulation of the reinsurance industry, including federal licensing in addition to, or in lieu of, state licensing and reinsurance for natural catastrophes. We are unable to predict whether any legislation will be enacted or any regulations will be adopted, or the effect these developments could have on our business, financial condition or results of operations.

U.K. Regulation

Prior to October 2009, Platinum UK was authorized and regulated by the Financial Services Authority ("FSA"), the statutory regulator responsible for regulating insurance activities in the United Kingdom, including reinsurance activities.

In 2006, we began to renew business previously written by Platinum UK in Platinum Bermuda. After successfully renewing substantially all of the reinsurance business written by Platinum UK in Platinum Bermuda, we ceased underwriting reinsurance business in Platinum UK in 2007. Platinum UK filed a Scheme of Operation with the FSA which included actions to be taken in 2007 for its transition to a non-underwriting operation and to allow the distribution of substantially all of its capital to Platinum Regency. These actions included a 100% loss portfolio transfer of Platinum UK's reinsurance business to Platinum Bermuda, which effectively replaced a previous 55% quota share agreement, and a plan for the administration of in force contracts and related claims. During 2008, Platinum UK received approval from the FSA to implement a novation program. The novation (or termination by other means) of Platinum UK's reinsurance contracts to Platinum Bermuda was completed in 2009 and Platinum UK ceased to be authorized by the FSA on October 22, 2009 and, therefore, is no longer subject to FSA rules. As Platinum UK no longer carries on any business, we released the remainder of Platinum UK's capital to Platinum Regency in 2010 and plan to wind up the remaining operations of Platinum UK in 2011.

Ireland Regulation

Platinum Regency is incorporated in Ireland. As a holding company, Platinum Regency is not subject to Irish insurance regulation. Irish law prohibits Platinum Regency from declaring a dividend to its shareholders unless it has "profits available for distribution." The determination of whether a company has profits available for distribution is based on its accumulated realized profits less its accumulated realized losses.

Solvency II

The European Union is introducing a new regulatory regime for the regulation of the insurance and reinsurance sector known as "Solvency II." Solvency II is a principles-based regulatory regime which seeks to promote financial stability, enhance transparency and facilitate harmonization among insurance and reinsurance companies within the European Community ("EC"). Solvency II employs a risk-based approach to setting capital requirements for insurers and reinsurers. Solvency II is scheduled to become effective on December 31, 2012, and work on development of the new regulatory regime will continue throughout 2011. The European Commission (the "Commission") intends to publish final rules in 2011 that will apply under a Solvency II regime, and a study is expected to be published in 2011 that will indicate the potential effect of adopting the "standard model" under Solvency II for calculating capital requirements across the European insurance industry that will be applicable to any subsidiary company that is based in the region. This may provide an indication of the capital requirements for multinational groups with European subsidiaries under the standard Solvency II regime.

One aspect of Solvency II concerns the treatment of reinsurance ceded by EC insurers to reinsurers headquartered in a country outside the EC. For example, consideration is being given as to whether reinsurance ceded to a non-EC reinsurer should be treated in the same way as reinsurance ceded to an EC reinsurer, and whether EC cedants should require their non-EC reinsurers to provide collateral to cover unearned premium and outstanding claims provisions. The Solvency II directive proposes that EC and non-EC reinsurers shall be treated in the same way provided that the non-EC jurisdiction is found to have a regulatory regime "equivalent" to that of Solvency II. The European Union's Committee of European Insurance and Occupational Pensions Supervisors ("CEIOPS") (which has been replaced by the European Insurance and Occupational Pensions Authority ("EIOPA") effective January 1, 2011) recommended in July 2010 that Bermuda be included in the first group of countries (along with Japan and Switzerland) that will be assessed for equivalence with European Union insurance regulations under Solvency II. The Commission will assess whether Bermuda's insurance regulatory regime is equivalent – i.e., whether Bermuda's system of insurance regulation provides a similar level of policyholder and beneficiary protection as Solvency II, for three purposes: (i) reinsurance, (ii) group solvency and (iii) group supervision. The Commission plans to publish its equivalence determinations for the first group of countries by July 2012. Transitional arrangements for eligible countries not included in the first group of equivalence assessments could be adopted as part of a directive that is yet

to be proposed by the Commission. A country included in the transitional arrangements potentially would be treated as if the country were found to have a regulatory regime “equivalent” to Solvency II.

Available Information

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and any amendments to those reports, are available free of charge on our Internet website at www.platinumre.com as soon as reasonably practicable after such reports are electronically filed with the Securities and Exchange Commission (the “SEC”). We also post on our website the charters of our Audit, Compensation, Governance and Executive Committees, our Corporate Governance Guidelines, our Code of Business Conduct and Ethics and any amendments or waivers thereto, and any other corporate governance materials required to be posted by SEC or New York Stock Exchange (“NYSE”) regulations. These documents are also available in print to any shareholder requesting a copy from our corporate secretary at our principal executive offices. Information contained on the Platinum Holdings website is not part of this Form 10-K.

Item 1A. Risk Factors

Numerous factors could cause our actual results to differ materially from those in the forward-looking statements set forth in this Form 10-K and in other documents that we file with the SEC. Those factors include the following:

Risks Related to Our Business

The occurrence of severe catastrophic events could have a material adverse effect on our financial condition or results of operations.

We underwrite property and casualty reinsurance and have large aggregate exposures to natural and man-made disasters and, consequently, we expect that our loss experience generally will include infrequent events of great severity. The frequency and severity of catastrophe losses are inherently difficult to predict, therefore, the occurrence of losses from a severe catastrophe or series of catastrophes could have a material adverse effect on our ability to write new business and on our results of operations and financial condition, possibly to the extent of eliminating our shareholders' equity. Increases in the values and geographic concentrations of insured property and the effects of inflation have historically resulted in increased severity of industry losses in recent years and, although we seek to limit our overall exposure to risk by limiting the amount of reinsurance we write by geographic zone, we expect that those factors will increase the severity of catastrophe losses in the future. Global climate change may increase the frequency and severity of losses from hurricanes, tornadoes, windstorms, hailstorms, freezes, floods and other weather-related disasters.

If the loss limitation methods and loss and pricing models we employ are not effective, our financial condition or results of operations could be materially adversely affected.

Our property and casualty reinsurance contracts cover unpredictable events such as hurricanes, windstorms, hailstorms, earthquakes, volcanic eruptions, fires, industrial explosions, freezes, riots, floods and other natural or man-made disasters. Underwriting requires significant judgment, involving assumptions about matters that are inherently difficult to predict and beyond our control, and for which historical experience and probability analysis may not provide sufficient guidance. Reinsurance contracts generally contain limits that restrict the amount that we may be required to pay in the event of a loss. Our contracts typically contain a per risk limit or an occurrence limit and may contain both. Some of our contracts contain an aggregate limit. Property and marine reinsurance contracts with natural catastrophe exposure generally contain occurrence limits. In addition, our high layer property and marine reinsurance contracts generally contain aggregate limits. Casualty reinsurance contracts generally contain either a per risk or an occurrence limit. Casualty clash contracts generally contain an aggregate limit. Few of our other casualty contracts contain an aggregate limit. We seek to manage our risk by limiting our estimated probable maximum loss from a catastrophic event in any geographic zone that could be expected to occur once in every 250 years to a specified percentage of total capital. One or more catastrophic or other events could result in claims that substantially exceed our expectations and could have a material adverse effect on our results of operations and financial condition, possibly to the extent of eliminating our shareholders' equity.

We believe that the computer-based loss and pricing models we use to assess each ceding company's potential for catastrophe losses is an important part of the underwriting process for catastrophe exposure pricing. However, these models depend on the quality of the information obtained from our ceding companies and the independent data we obtain from third parties and may prove inadequate for determining the pricing for certain catastrophe exposures. Our models may not accurately predict changes in weather patterns related to climate change or the impact of these changes. If climate change causes more severe or frequent weather-related disasters than we anticipate, our losses may exceed our expectations, which could have a material adverse effect on our financial condition and results of operations.

For our property and casualty reinsurance underwriting, we depend on the policies, procedures and expertise of ceding companies; these companies may fail to accurately assess the risks they underwrite, which may lead us to inaccurately assess the risks we assume.

Because we participate in property and casualty reinsurance markets, the success of our underwriting efforts depends, in part, upon the policies, procedures and expertise of the ceding companies making the original underwriting decisions. As is common among reinsurers, we do not separately evaluate each of the individual risks assumed under reinsurance treaties. We face the risk that these ceding companies may fail to accurately assess the risks that they assume initially, which, in turn, may lead us to inaccurately assess the risks we assume. If we fail to establish and receive appropriate premium rates or fail to contractually limit our exposure to such risks, we could face significant losses on these contracts.

If we are required to increase our liabilities for losses and LAE, our operating results may be adversely affected.

We establish liabilities for losses and LAE that we are or will be liable to pay for reinsured claims for events that have occurred on or before the balance sheet date. At any time, these liabilities may prove to be inadequate to cover our actual losses and LAE. To the extent these liabilities are determined to be insufficient to cover actual losses or LAE, we will have to increase these liabilities and incur a charge to our earnings, which could have a material adverse effect on our financial condition and results of operations. In accordance with laws, regulations and accounting principles generally accepted in the United States ("U.S. GAAP"), we do not establish liabilities until an event occurs which may give rise to a loss. Once such an event occurs, liabilities are established based upon estimates of the total losses

incurred by the ceding companies and an estimate of the portion of such loss we have reinsured.

The liabilities established on our consolidated balance sheet do not represent an exact calculation of liability, but rather are estimates of the expected cost of the ultimate settlement of losses. We do not separately evaluate each of the individual insurance or reinsurance contracts assumed under our treaties and we are largely dependent on the original underwriting decisions made by ceding companies. All of our liability estimates are based on actuarial and statistical projections at a given time, facts and circumstances known at that time and estimates of trends in loss severity and other variable factors, including new concepts of liability and general economic conditions. Changes in these trends or other variable factors could result in claims in excess of the liabilities that we have established.

The effects of emerging claim and coverage issues on our business are uncertain.

As industry practices and legal, judicial, social and other environmental conditions change, unexpected and unintended issues related to claims and coverage may emerge. Various provisions of our contracts, such as limitations or exclusions from coverage or choice of forum, may be difficult to enforce in the manner we intend, due to, among other things, disputes relating to coverage and choice of legal forum. These issues may adversely affect our business by either extending coverage beyond our underwriting intent or by increasing the number or size of claims. In some instances, these changes may not become apparent until some time after we have issued reinsurance contracts that are affected by the changes. As a result, the full extent of liability under our reinsurance contracts may not be known for many years after a contract is issued. The effects of unforeseen developments or substantial government intervention could adversely impact our ability to achieve our goals. Examples of emerging coverage and claims issues include larger settlements and jury awards against professionals and corporate directors and officers covered by professional liability and directors' and officers' liability insurance and whether the substantial losses from hurricanes, including Hurricane Katrina and Ike, were the result of storm surge, which is sometimes covered by insurance, or flood, which generally is not covered.

A downgrade in our financial strength ratings could adversely affect our ability to write new business.

Financial strength ratings are used by ceding companies and reinsurance intermediaries to assess the financial strength and quality of reinsurers. In addition, a ceding company's own rating may be adversely affected by a downgrade in the rating of its reinsurer. Therefore, a downgrade of our financial strength rating may dissuade a ceding company from reinsuring with us and may influence a ceding company to reinsure with a competitor that has a higher rating.

A.M. Best has assigned a financial strength rating of "A" (Excellent) with a stable outlook to each of our reinsurance subsidiaries. This rating is the third highest of sixteen rating levels. According to A.M. Best, a rating of "A" indicates A.M. Best's opinion that a company has an excellent ability to meet its ongoing obligations to policyholders. S&P has assigned a financial strength rating of "A" (Strong) with a stable outlook to each of our reinsurance subsidiaries. This rating is the sixth highest of twenty-one levels. According to S&P, a rating of "A" indicates S&P's opinion that an insurer has strong financial security characteristics, but is somewhat more likely to be affected by adverse business conditions than are insurers with higher ratings. These ratings are subject to periodic review by A.M. Best and S&P and may be revised downward or revoked at the sole discretion of A.M. Best or S&P. A.M. Best and S&P may increase their scrutiny of rated companies, revise their rating standards or take other action that could lead to changes in our ratings. If A.M. Best or S&P revise their rating standards associated with our current rating, our rating may be downgraded or we may need to raise additional capital to maintain our rating.

Our reinsurance contracts commonly contain terms that would allow a ceding company to cancel the contract or require us to collateralize all or part of our obligation if our financial strength rating was downgraded below a certain rating level. Whether a client would exercise a cancellation right would depend on, among other factors, the reason for such downgrade, the extent of the downgrade, the prevailing market conditions and the pricing and availability of replacement reinsurance coverage. Any such cancellation could have a material adverse effect on our financial condition or results of operations.

Losses from operations may deplete our capital base and create a need to obtain additional capital that may not be readily available in the capital markets or may only be available on unfavorable terms.

Losses from operations, including severe catastrophic events, could cause a material decline in our shareholders' equity. We are dependent on our financial strength and ratings, as evaluated by independent rating agencies, to underwrite reinsurance. A material decline in our existing capital below a level necessary to maintain our ratings may require us to raise additional capital through private financings or the capital markets. To the extent that our existing capital is insufficient to fund our future operating requirements, we may need to raise additional funds through financings or limit our growth. Any equity or debt financing, if available at all, may be on terms that are unfavorable to us. Equity financings could result in dilution to our shareholders. We may issue securities that have rights, preferences and privileges that are senior to those of our outstanding securities. If we are not able to obtain adequate capital, our business, results of operations, financial condition and financial strength and credit ratings could be adversely affected.

We have exposure to credit loss from counterparties in the normal course of business.

We may from time to time collateralize our obligations under our various reinsurance contracts by delivering letters of credit to the ceding company, depositing assets into trust for the benefit of the ceding company or permitting the ceding company to withhold funds that would otherwise be delivered to us under the reinsurance contract. We have entered into reinsurance contracts with several ceding companies that require us to provide varying levels of collateral for our obligations under certain circumstances, including when our obligations to these ceding companies exceed negotiated amounts. These amounts may vary depending on our rating from A.M. Best, S&P or other rating agencies. The amount of collateral we are required to provide typically represents a portion of the obligations we may owe the ceding company, often including estimates of unpaid losses made by the ceding company. Since we may be required to provide collateral based on the ceding company's estimate, we may be obligated to provide collateral that exceeds our estimates of the ultimate liability to the ceding company. It is also unclear what, if any, the impact would be in the event of the liquidation of a ceding company with which we have a collateral arrangement.

Reinsurance premiums receivable from ceding companies are subject to credit risk. To mitigate credit risk related to reinsurance premiums receivable, we have established standards for ceding companies and, in most cases, have a contractual right of offset thereby allowing us to settle claims net of any such reinsurance premiums receivable.

We also have credit exposure with respect to retrocessionaires and derivative counterparties. Our retrocessionaires and counterparties to our derivative contracts may be affected by economic events which could adversely affect their ability to meet their obligations to us.

The availability and cost of security arrangements for reinsurance transactions may materially impact our ability to provide reinsurance from Bermuda to insurers domiciled in the United States.

Platinum Bermuda is not licensed, approved or accredited as a reinsurer in any state in the United States and, therefore, under the terms of most of its contracts with U.S. ceding companies, it is required to provide collateral to its ceding companies for unpaid ceded liabilities in a form acceptable to state insurance commissioners. Typically, this

type of collateral takes the form of letters of credit issued by a bank, the establishment of a trust, or funds withheld. We have the ability to issue up to \$400.0 million in letters of credit under a credit facility that consists of a \$150.0 million senior unsecured credit facility available for revolving borrowings and letters of credit and a \$250.0 million senior secured credit facility available for letters of credit. This credit facility expires on September 13, 2011. While we intend to enter into a new credit facility in 2011, we do not know what the terms of the new facility will be or if the terms will be the same as or similar to the current terms. If this credit facility is not sufficient or if we are unable to renew it or to arrange for other types of security on commercially acceptable terms, Platinum Bermuda's ability to provide reinsurance to U.S. based clients may be severely limited.

The property and casualty reinsurance business is historically cyclical, and we expect to experience periods with excess underwriting capacity and unfavorable pricing.

Historically, property and casualty reinsurers have experienced significant fluctuations in operating results. Demand for reinsurance is influenced significantly by underwriting results of primary insurers and prevailing general economic and market conditions, all of which affect ceding companies' decisions as to the amount or portion of risk that they retain for their own accounts and consequently reinsurance premium rates. The supply of reinsurance is related to prevailing prices, the levels of insured losses and levels of industry surplus which, in turn, may fluctuate in response to changes in rates of return on investments being earned in the reinsurance industry. As a result, the property and casualty reinsurance business historically has been a cyclical industry, characterized by periods of intense price competition due to excessive underwriting capacity as well as periods when shortages of capacity have permitted favorable pricing. We can expect to experience the effects of such cyclicity.

The cyclical trends in the industry and the industry's profitability can also be affected significantly by volatile and unpredictable developments, including what management believes to be a trend of courts to grant increasingly larger awards for certain damages, natural disasters (such as catastrophic hurricanes, windstorms, tornadoes, earthquakes and floods), acts of terrorism, fluctuations in interest rates, changes in the investment environment that affect market prices of and income and returns on investments and inflationary pressures that may tend to affect the size of losses experienced by primary insurers. Periods of severe inflation or deflation or prolonged periods of recession may adversely impact our results of operations or financial condition. Unfavorable market conditions may affect our ability to write reinsurance at rates that we consider appropriate relative to the risk assumed. If we cannot write property and casualty reinsurance at appropriate rates, our business would be significantly and adversely affected.

Increased competition could adversely affect our profitability.

The property and casualty reinsurance industry is highly competitive. Some of our competitors are large financial institutions that have reinsurance operations, while others are specialty reinsurance companies. Many of our competitors have greater financial, marketing and management resources than we do. We compete with reinsurers worldwide on the basis of many factors, including premium charges and other terms and conditions offered, services provided, ratings assigned by independent rating agencies, speed of claims payment, claims experience, perceived financial strength and experience and reputation of the reinsurer in the line of reinsurance to be underwritten. We may not be successful in competing with others on any of these bases, and the intensity of competition in our industry may erode profitability and result in less favorable policy terms and conditions for insurance and reinsurance companies generally, including us.

Traditional as well as new capital market participants from time to time produce alternative products (such as reinsurance securitizations, catastrophe bonds and various derivative instruments, such as swaps) that may compete with certain types of reinsurance, such as property catastrophe. Over time, these numerous initiatives could significantly affect supply, pricing and competition in our industry and partially displace our traditional reinsurance products.

We could face losses from terrorism, political unrest and war.

We have exposure to losses resulting from acts of terrorism, political unrest and acts of war. It is difficult to predict the occurrence of these events or to estimate the amount of loss an occurrence will generate. Accordingly, it is possible that actual losses from such an event will exceed our probable maximum loss estimate. We closely monitor the amount and types of coverage that we provide for terrorism risk under reinsurance treaties. If we think we can reasonably evaluate the risk of loss and charge an appropriate premium for such risk we will write some terrorism exposure on a stand-alone basis. Otherwise, we generally seek to exclude terrorism from non-terrorism treaties. If we cannot exclude terrorism, we will evaluate the risk of loss and attempt to charge an appropriate premium for such risk. Even in cases where we have deliberately sought to exclude coverage, we may not be able to completely eliminate our exposure to terrorist acts. Thus it is possible that these acts will have a material adverse effect on us.

We are dependent on the business provided to us by reinsurance brokers and we may be exposed to liability for brokers' failure to make premium payments to us or claim payments to our clients.

We market substantially all of our reinsurance products through reinsurance brokers. The reinsurance brokerage industry generally, and our sources of business specifically, are concentrated. The loss of business relationships with any of our top brokers could have a material adverse effect on our business.

In accordance with industry practice, we frequently pay amounts in respect of claims under contracts to reinsurance brokers for payment to the ceding companies. In the event that a broker fails to make such a payment, we may remain liable to the ceding company for the payment. When ceding companies remit premiums to reinsurance brokers, such premiums may be deemed to have been paid to us and the ceding company may no longer be liable to us for those amounts whether or not we actually receive the funds. Consequently, we assume a degree of credit risk associated with our brokers during the premium and loss settlement process.

Catastrophic loss protection may become unavailable to us on acceptable terms.

We buy retrocessional reinsurance and use derivative instruments to reduce liability on individual risks, protect against catastrophic losses and obtain additional underwriting capacity. Catastrophic loss protection capacity may be limited or unavailable or may be available only on terms that we find unacceptable. If we are unable or unwilling to

obtain such protection on acceptable terms, our financial position and results of operations may be materially adversely affected, especially by catastrophic losses. Elimination of all or portions of our catastrophic loss protection could subject us to increased, and possibly material, exposure to losses or could cause us to underwrite less business.

Any retrocessional reinsurance we purchase that is uncollateralized subjects us to credit risk because the ceding of risk to retrocessionaires does not relieve a reinsurer of its liability to the ceding companies. Therefore, a retrocessionaire's insolvency or its inability or unwillingness to make payments under the terms of its reinsurance contract with us could have a material adverse effect on us. Likewise, counterparties to our derivative contracts may be affected by economic events that could adversely affect their ability to meet their obligations to us.

Foreign currency exchange rate fluctuation may adversely affect our financial results.

We routinely transact business in various currencies other than the U.S. dollar, our financial reporting currency. Our principal exposure to foreign currency exchange rate risk is the transaction of business in foreign currencies. We may incur foreign currency exchange gains or losses as we ultimately settle claims required to be paid in foreign currencies. To the extent we do not seek to hedge our foreign currency risk or our hedges prove ineffective, the resulting impact of a movement in foreign currency exchange rate could materially adversely affect our financial condition and results of operations.

Our success will depend on our ability to maintain and enhance effective operating procedures and internal controls over financial reporting.

Our management does not expect that our disclosure controls and procedures or our internal controls over financial reporting will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons or by collusion of two or more people. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions; over time, controls may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Our disclosure controls and procedures and our internal controls over financial reporting were designed to provide reasonable assurances that their objectives would be met.

The preparation of our financial statements requires us to make many estimates and judgments.

The preparation of consolidated financial statements requires us to make many estimates and judgments that affect the reported amounts of assets, liabilities (including reserves), revenues and expenses, and related disclosures of contingent liabilities. On an ongoing basis, we evaluate our estimates, including those related to premiums written and earned, insurance and other reserves, reinsurance recoverables, investment valuations, bad debt, income taxes, contingencies and litigation. We base our estimates on historical experience, where possible, and on various other assumptions that we believe to be reasonable under the circumstances, which form the basis for our judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. We utilize actuarial models as well as historical insurance industry loss development patterns to establish our initial loss reserves. Over time, other common reserving methodologies have begun to be employed. Actual claims and claim expenses paid may deviate, perhaps substantially, from the reserve estimates reflected in our financial statements.

The covenants in our credit facility limit our financial and operational flexibility, which could have an adverse effect on our financial condition.

We have incurred indebtedness, and may incur additional indebtedness in the future. Our indebtedness primarily consists of publicly traded notes and a credit facility consisting of letter of credit and revolving credit facilities. For more details on our indebtedness, see Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations – Financial Condition – Liquidity – Sources of Liquidity,” in this Form 10-K.

Our credit facility contains covenants that limit our ability, among other things, to borrow money, make particular types of investments or other restricted payments, sell assets, merge or consolidate. The credit facility also requires us to maintain specific financial ratios. If we fail to comply with these covenants or meet these financial ratios, the lenders under our credit facility could declare a default and demand immediate repayment of all amounts owed to them, cancel their commitments to lend or issue letters of credit, or both, and require us to pledge additional or a different type of collateral.

We could be adversely affected by the loss of one or more key executives, by an inability to retain or replace qualified senior management or by an inability to renew the Bermuda work permits of any of our key executives or other key personnel.

Our success depends on our ability to retain the services of key executives and to attract and retain additional qualified personnel in the future. Under Bermuda law, non-Bermudians (other than spouses of Bermudians) may not engage in any gainful occupation in Bermuda without the specific permission of the appropriate governmental authority. None of our executive officers is a Bermudian, and all such officers employed in Bermuda, including our Chief Executive Officer, Chief Financial Officer and Chief Administrative Officer and General Counsel and the Chief Executive Officer of Platinum Bermuda, are employed pursuant to work permits granted by Bermuda authorities. These permits expire at various times during the next several years. The Bermuda government limits the term of work permits to six years, subject to certain exceptions for key employees. The loss of the services of our key executives or the inability to hire and retain other highly qualified personnel in the future, including as a result of our inability to renew the Bermudian work permits of such individuals, could adversely affect our business plans and strategies or cause us to lose clients.

Risks Related to Our Investments

Our investment performance may adversely affect our results of operations, financial position and ability to conduct business.

Our operating results depend in part on the performance of our investment portfolio. Our investments are subject to market-wide risks and fluctuations. In addition, we are subject to risks inherent in particular securities or types of securities, such as the ability of issuers to repay their debt. Adverse developments in the financial markets, such as disruptions, uncertainty or volatility in the capital and credit markets, may result in realized and unrealized capital losses that could have a material adverse effect on our results of operations, financial position and ability to conduct business, and may also limit our access to capital required to operate our business. Severe disruptions in the public debt and equity markets, including, among other things, widening of credit spreads, lack of liquidity and bankruptcies, may result in significant realized and unrealized losses in our investment portfolio. Depending on market conditions, we could incur additional realized and unrealized losses on our investment portfolio in future periods, which could have a material adverse effect on our results of operations, financial condition and ability to conduct business.

Fluctuations in the mortgage-backed and asset-backed securities markets could result in decreases in the fair value of our commercial mortgage-backed, non-agency residential mortgage-backed and asset-backed securities.

The commercial mortgage-backed, non-agency residential mortgage-backed and asset-backed securities markets have experienced reductions in liquidity as a result of the recent financial crisis. When financial markets experience a reduction in liquidity, the ability to conduct orderly transactions may be limited and may result in declines in fair values. We have significant investments in these asset classes. As of December 31, 2010, approximately 10% of our total investments were invested in commercial mortgage-backed, non-agency residential mortgage-backed and asset-backed securities. The fair value, unrealized gain or loss and average rating of our investments in commercial mortgage-backed, non-agency residential mortgage-backed and asset-backed securities is set forth in Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Financial Condition," in this Form 10-K. Decreases in the fair value of our commercial mortgage-backed, non-agency residential mortgage-backed and asset-backed securities could have a material adverse effect on our financial condition and results of operations.

Changes in market interest rates could have a material adverse effect on our investment portfolio, investment income and results of operations.

Our principal invested assets are fixed maturity securities. Increasing market interest rates reduce the value of our fixed maturity securities, and we may realize a loss if we sell fixed maturity securities whose value has fallen below their amortized cost prior to maturity. Declining market interest rates can have the effect of reducing our investment income, as we invest proceeds from positive cash flows from operations and reinvest proceeds from maturing and called investments in new lower-yielding investments. Interest rates are highly sensitive to many factors, including governmental monetary policies, domestic and international economic and political conditions and other factors beyond our control. Any measures we take that are intended to manage the risks of operating in a changing interest rate environment may not effectively mitigate such interest rate sensitivity. Accordingly, changes in interest rates could have a material adverse effect on our investment portfolio, investment income and results of operations.

Concentration in any particular industry, asset class or geographic region may adversely affect our investment portfolio.

Concentration of our investment portfolio in any particular industry, asset class or geographic region may have a material adverse effect on our investment portfolio, financial condition and results of operations. While we seek to mitigate this risk by having a broadly diversified portfolio, events or developments that have a negative effect on any particular industry, asset class or geographic region may have a greater adverse effect on our investment portfolio to the extent that the portfolio is concentrated rather than diversified at certain periods of time. Further, the ability to sell such investments may be limited if other market participants are seeking to sell similar investments at the same time.

Risks Related to Taxation

We may become subject to taxes in Bermuda after 2016.

We have received a standard assurance from the Minister of Finance, under Bermuda's Exempted Undertakings Tax Protection Act 1966, that if any legislation is enacted in Bermuda that would impose tax computed on profits or income, or computed on any capital asset, gain or appreciation, or any tax in the nature of estate duty or inheritance tax, then the imposition of any such tax will not be applicable to us or to any of our operations or our shares, debentures or other obligations until March 28, 2016. Consequently, if our Bermuda tax exemption is not extended past March 28, 2016, we may be subject to any Bermuda tax after that date. In November 2010, the Minister of Finance announced that the standard assurance will be extended to 2035, but the legislation required for this extension has not yet been brought before the Bermuda Legislature.

The imposition of U.S. corporate income tax on Platinum Holdings and its non-U.S. subsidiaries could adversely affect our results of operations.

We believe that Platinum Holdings, Platinum Bermuda, Platinum UK Services Company Limited, Platinum UK, and Platinum Regency each operate in such a manner that none of these companies should be subject to U.S. corporate income tax because they are not engaged in a trade or business in the United States. Nevertheless, because definitive identification of activities which constitute being engaged in a trade or business in the United States has not been established by the tax authorities, the U.S. Internal Revenue Service (the "IRS") may successfully assert that any of these companies is engaged in a trade or business in the United States, or, if applicable, engaged in a trade or business in the United States through a permanent establishment. If any of these companies were characterized as being so engaged, such company would be subject to U.S. tax at regular corporate rates on its income that is effectively connected ("ECI") with its U.S. trade or business, plus an additional 30% "branch profits" tax on its dividend equivalent amount (generally ECI with certain adjustments) deemed withdrawn from the United States. Any such tax could materially adversely affect our results of operations.

U.S. Persons who hold our shares will be subject to adverse U.S. federal income tax consequences if we are considered to be a passive foreign investment company for U.S. federal income tax purposes.

The term "U.S. Person" means: (i) an individual citizen or resident of the United States, (ii) a partnership or corporation, created or organized in or under the laws of the United States, or organized under the laws of any State thereof (including the District of Columbia), (iii) an estate, the income of which is subject to U.S. federal income taxation regardless of its source, (iv) a trust if either a court within the United States is able to exercise primary supervision over the administration of such trust and one or more U.S. Persons have the authority to control all substantial decisions of such trust, or the trust has a valid election in effect to be treated as a U.S. Person for U.S. federal income tax purposes or (v) any other person or entity that is treated for U.S. federal income tax purposes as if it were one of the foregoing.

If Platinum Holdings is considered a passive foreign investment company (“PFIC”) for U.S. federal income tax purposes, a U.S. Person who owns directly or, in some cases, indirectly (e.g., through a non-U.S. partnership) any of our shares will be subject to adverse U.S. federal income tax consequences including subjecting the investor to a greater tax liability than might otherwise apply and subjecting the investor to tax on amounts in advance of when tax would otherwise be imposed. In addition, if we were considered a PFIC, upon the death of any U.S. individual owning shares, such individual's heirs or estate would not be entitled to a “step-up” in the basis of the shares that might otherwise be available under U.S. federal income tax laws. Although there is an exception for purposes of the PFIC rules for non-U.S. insurance companies predominantly engaged in the active conduct of an insurance business, there are currently no regulations regarding the application of the PFIC provisions to an insurance company and there is no other guidance to explain what constitutes the “active conduct of an insurance business for U.S. federal income tax purposes.” New regulations or pronouncements interpreting or clarifying these rules may be forthcoming. We believe we should not be characterized as a PFIC; however, we cannot assure you that we will not be characterized as a PFIC for U.S. federal income tax purposes. If we are considered a PFIC, it could have material adverse tax consequences for an investor that is subject to U.S. federal income taxation.

Under certain circumstances, you may be required to pay taxes on your pro rata share of the related person insurance income of Platinum Bermuda.

If (i) U.S. Persons are treated as owning 25% or more of our shares, (ii) the related person insurance income (“RPII”) of Platinum Bermuda were to equal or exceed 20% of the gross insurance income of Platinum Bermuda in any taxable year, and (iii) direct or indirect insureds (and persons related to such insureds) own (or are treated as owning) 20% or more of the voting power or value of the shares of Platinum Bermuda, a U.S. Person who owns our shares directly, or indirectly through non-U.S. entities, on the last day of the taxable year would be required to include in its income for U.S. federal income tax purposes the shareholder's pro rata share of the RPII of Platinum Bermuda for the entire taxable year, determined as if such RPII were distributed proportionately to such U.S. Persons at that date regardless of whether such income is distributed. RPII generally represents premium and related investment income from the direct or indirect insurance or reinsurance of any direct or indirect U.S. holder of our shares or any person related to such holder. In addition, any RPII that is includible in the income of a U.S. tax-exempt organization generally will be treated as unrelated business taxable income. The amount of RPII earned by Platinum Bermuda will depend on a number of factors, including the geographic distribution of the business of Platinum Bermuda and the identity of persons directly or indirectly insured or reinsured by Platinum Bermuda. Some of the factors which determine the extent of RPII in any period may be beyond the control of Platinum Bermuda. Although we expect that either (i) the gross RPII of Platinum Bermuda will not exceed 20% of its gross insurance income for the taxable year or (ii) direct or indirect insureds (and persons related to those insureds) will not own directly or indirectly through entities 20% or more of the voting power or value of our shares for the foreseeable future, we cannot be certain that this will be the case because some of the factors which determine the extent of RPII may be beyond our control.

U.S. Persons who dispose of our shares may be subject to U.S. federal income taxation at the rates applicable to dividends on all or a portion of their gains, if any.

The RPII rules provide that if a U.S. Person disposes of shares in a non-U.S. insurance corporation in which U.S. Persons own 25% or more of the shares (even if the amount of gross RPII is less than 20% of the corporation's gross insurance income and the ownership of its shares by direct or indirect insureds and related persons is less than the 20% threshold), any gain from the disposition will generally be treated as a dividend to the extent of the shareholder's share of the corporation's undistributed earnings and profits that were accumulated during the period that the shareholder owned the shares (whether or not such earnings and profits are attributable to RPII). In addition, such a shareholder will be required to comply with certain reporting requirements, regardless of the amount of shares owned by the shareholder. These RPII rules should not apply to dispositions of our shares because Platinum Holdings will not be directly engaged in the insurance business. The RPII provisions, however, have never been interpreted by the courts or the U.S. Treasury Department in the form of final regulations. Regulations interpreting the RPII provisions of the U.S. Internal Revenue Code of 1986, as amended (the "Code"), exist only in proposed form. It is not certain whether these proposed regulations will be adopted in their present form or what changes or clarifications might ultimately be made thereto or whether any such changes, as well as any interpretation or application of the RPII rules by the IRS, the courts, or otherwise, might have retroactive effect.

Holders of 10% or more of our shares may be subject to U.S. income taxation under the "controlled foreign corporation" rules.

A U.S. Person that is a "10% U.S. Shareholder" of a non-U.S. corporation (defined as a U.S. Person who owns or is treated as owning at least 10% of the total combined voting power of all classes of stock entitled to vote of the non-U.S. corporation) that is a controlled foreign corporation ("CFC") for an uninterrupted period of 30 days or more during a taxable year, that owns shares in the CFC directly, or indirectly through non-U.S. entities, on the last day of the CFC's taxable year, must include in its gross income for U.S. federal income tax purposes its pro rata share of the CFC's "subpart F income," even if the subpart F income is not distributed. "Subpart F income" of a non-U.S. insurance corporation typically includes foreign personal holding company income (such as interest, dividends and other types of passive income), as well as insurance and reinsurance income (including underwriting and investment income). A non-U.S. corporation is considered a CFC if "10% U.S. Shareholders" own (directly, indirectly through non-U.S. entities or by attribution by application of the constructive ownership rules of section 958(b) of the Code (i.e., "constructively")) more than 50% of the total combined voting power of all classes of stock of that foreign corporation, or the total value of all stock of that foreign corporation.

For purposes of taking into account insurance income, a CFC also includes a non-U.S. insurance company in which more than 25% of the total combined voting power of all classes of stock (or more than 25% of the total value of the stock) is owned directly, indirectly through non-U.S. entities or constructively by 10% U.S. Shareholders on any day during the taxable year of such corporation, if the gross amount of premiums or other consideration for the reinsurance or the issuing of insurance or annuity contracts (other than certain insurance or reinsurance related to same country risks written by certain insurance companies not applicable here) exceeds 75% of the gross amount of all premiums or other consideration in respect of all risks.

We believe that because of the anticipated dispersion of our share ownership, and provisions in our organizational documents that limit voting power, no U.S. Person should be treated as owning (directly, indirectly through non-U.S. entities or constructively) 10% or more of the total voting power of all classes of our shares. However, the IRS could successfully challenge the effectiveness of these provisions in our organizational documents. Accordingly, no assurance can be given that a U.S. Person who owns our shares will not be characterized as a 10% U.S. Shareholder.

Changes in U.S. federal income tax law could materially adversely affect an investment in our shares.

Legislation was introduced in the U.S. Congress intended to eliminate certain perceived tax advantages of companies (including insurance companies) that have legal domiciles outside the United States but have certain U.S. connections. For example, legislation was introduced in Congress to limit the deductibility of reinsurance premiums paid by U.S. companies to non-U.S. affiliates. A similar provision was included as part of the federal budget proposed by the President of the United States for 2011. It is possible that this or similar legislation could be introduced in and enacted by the current Congress or future Congresses that could have an adverse impact on us or our shareholders. In addition, existing interpretations of U.S. federal income tax law could change, also resulting in an adverse impact on us or our shareholders.

The impact of Bermuda's commitment to the Organization for Economic Cooperation and Development (the "OECD") to eliminate harmful tax practices is uncertain and could adversely affect our tax status in Bermuda.

The OECD has published reports and launched a global dialogue among member and non-member countries on measures to limit harmful tax competition. These measures are largely directed at counteracting the effects of tax havens and preferential tax regimes in countries around the world. In response to a number of measures taken and commitments by the government of Bermuda, Bermuda is listed as a jurisdiction that has substantially implemented these measures. We are not able to predict what changes will arise from the commitment or whether such changes will subject us to additional taxes.

Risks Related to Laws and Regulations

The regulatory system under which we operate and potential changes thereto could significantly and adversely affect our business.

The business of reinsurance is regulated in most countries, although the degree and type of regulation varies significantly from one jurisdiction to another. Reinsurers are generally subject to less direct regulation than primary insurers. Reinsurers licensed in the United States and Bermuda are regulated and must comply with financial supervision standards comparable to those governing primary insurers. For additional discussion of the regulatory requirements to which Platinum Holdings, as a holding company, and its subsidiaries are subject, see Item 1 "Business – Regulation," in this Form 10-K. Any failure to comply with applicable laws could result in the imposition of significant restrictions on our ability to do business, and could also result in fines and other sanctions, any or all of which could materially adversely affect our financial condition and results of operations. In addition, these statutes and regulations may, in effect, restrict the ability of our subsidiaries to write new business or, as indicated below, distribute funds to Platinum Holdings.

In recent years, some U.S. state legislatures have considered or enacted laws that may alter or increase state authority to regulate insurance companies and insurance holding companies. Moreover, the NAIC and state insurance regulators regularly re-examine existing laws and regulations and interpretations of existing laws and develop new laws. The new interpretations or laws may be more restrictive or may result in higher costs to us than current statutory requirements. In addition, the U.S. federal government has undertaken initiatives or considered legislation in several areas that may impact the reinsurance industry, including tort reform, corporate governance and the taxation of reinsurance companies and has enacted the Dodd-Frank Act in 2010, which provides for certain changes in the regulation of reinsurance in the United States, as described below.

The European Union is introducing a new regulatory regime for the regulation of the insurance and reinsurance sector known as “Solvency II.” Solvency II is a principles-based regulatory regime which seeks to promote financial stability, enhance transparency and facilitate harmonization among insurance and reinsurance companies within the EC. Solvency II employs a risk-based approach to setting capital requirements for insurers and reinsurers.

Our reinsurance subsidiaries are headquartered in Bermuda and the United States, which are non-EC countries. If the regulatory regimes of such countries are found not to be equivalent to that of Solvency II and if our reinsurance subsidiaries fall below a certain minimum credit rating, then cedants in the EC may be prevented from recognizing the reinsurance provided to them by our reinsurance subsidiaries for the purpose of meeting their capital requirements or we may be required to provide collateral for our obligations to EC insurers. This could have a material adverse impact on our ability to conduct our business.

The insurance and reinsurance regulatory framework has become subject to increased scrutiny in many jurisdictions, including the U.S. federal and various state jurisdictions. In the past, there have been congressional and other proposals in the United States regarding increased supervision and regulation of the insurance industry, including proposals to supervise and regulate reinsurers domiciled outside the United States. For example, if Platinum Bermuda were to become subject to any insurance laws and regulations of the United States or any U.S. state, which are generally more restrictive than those applicable to it in Bermuda, Platinum Bermuda might be required to post deposits or maintain minimum surplus levels and might be prohibited from engaging in lines of business or from writing specified types of policies or contracts. Complying with those laws could have a material adverse effect on our ability to conduct our business.

Regulatory regimes and changes to accounting rules may adversely impact financial results irrespective of business operations.

Accounting standards and regulatory changes may require modifications to our accounting principles, both prospectively and for prior periods and such changes could have an adverse impact on our financial results. In particular, the SEC has formally proposed a plan to first allow and then require companies to file financial statements in accordance with International Financial Reporting Standards rather than U.S. GAAP. Such changes, if ultimately adopted, could have a significant impact on our financial reporting, impacting key matters such as our loss reserving policies and premium and expense recognition. For example, the International Accounting Standards Board is considering adopting an accounting standard that would require all reinsurance and insurance contracts to be accounted for under a new measurement basis, contract fulfillment value, which is considered to be more closely related to fair value than the current measurement basis, and would also require that deferred acquisition costs be derecognized and that future acquisition costs be expensed as incurred. We are currently evaluating how the SEC’s initiatives will impact us, including with respect to our loss reserving policy and the effect it might have on recognizing premium revenue and policy acquisition costs. Required modification of our existing principles, either with respect to these issues or other issues in the future, could have an impact on our results of operations, including changing the timing of the recognition of underwriting income, increasing the volatility of our reported earnings and changing our overall financial statement presentation.

The Dodd-Frank Act may adversely impact our business.

The Dodd-Frank Act was enacted on July 21, 2010. In addition to introducing sweeping reform of the U.S. financial services industry, the Dodd-Frank Act provides certain changes in the regulation of reinsurance in the United States. The Dodd-Frank Act prohibits a state from denying credit for reinsurance if the state of domicile of the insurer purchasing the reinsurance recognizes credit for reinsurance. At present, it appears the changes specific to reinsurance in the Dodd-Frank Act will not have a material adverse effect for non-U.S. reinsurers such as Platinum Bermuda, however, there is still significant uncertainty as to how these and other provisions of the Dodd-Frank Act will be

implemented in practice.

Platinum Holdings is a holding company and, consequently, its cash flow is dependent on dividends, interest and other permissible payments from its subsidiaries.

Platinum Holdings is a holding company that conducts no reinsurance operations of its own. All operations are conducted by its wholly owned reinsurance subsidiaries, Platinum Bermuda and Platinum US. As a holding company, Platinum Holdings' cash flow consists primarily of dividends, interest and other permissible payments from its subsidiaries. Platinum Holdings depends on such payments for general corporate purposes and to meet its obligations, including capital management activities and the payment of any dividends to its common shareholders.

Additionally, under the Companies Act, Platinum Holdings may declare or pay a dividend out of distributable reserves only if it has reasonable grounds for believing that it is, or after the payment would be, able to pay its liabilities as they become due and if the realizable value of its assets would thereby not be less than the aggregate of its liabilities and issued share capital and share premium accounts.

As a shareholder of our Company, you may have greater difficulty in protecting your interests than as a shareholder of a U.S. corporation.

The Companies Act differs in certain material respects from laws generally applicable to U.S. corporations and their shareholders. These differences include the manner in which directors must disclose transactions in which they have an interest, the rights of shareholders to bring class action and derivative lawsuits and the scope of indemnification available to directors and officers.

In addition, a substantial portion of our assets and certain of our officers and directors are or may be located in jurisdictions outside the United States. It may be difficult for investors to effect service of process within the United States on our directors and officers who reside outside the United States or to enforce against us or our directors and officers judgments of U.S. courts predicated upon civil liability provisions of the U.S. federal securities laws.

There are limitations on the ownership, transfer and voting rights of our common shares.

Under our Amended and Restated Bye-laws, our directors are required to decline to issue, repurchase, or register any transfer of shares if they determine in their sole discretion that such action may result in a person owning, directly or beneficially, and in some cases indirectly through non-U.S. entities or constructively, 10% or more of the voting power of all our issued shares. The directors also may refuse to issue, repurchase or register any transfer of shares if they determine in their sole discretion that such action may result in a non-de minimus adverse tax, legal or regulatory consequence.

In addition, our Amended and Restated Bye-laws generally provide that any person owning, directly or beneficially, and in some cases indirectly through non-U.S. entities or constructively, shares carrying 9.5% or more of the total voting rights attached to all of our outstanding shares, will have the voting rights attached to such shares reduced so that it may not exercise 9.5% or more of such total voting rights of the shares. Because of the attribution provisions of the Code and the rules of the SEC regarding determination of beneficial ownership, this requirement may have the effect of reducing the voting rights of a shareholder whether or not such shareholder directly holds 9.5% or more of our shares while other shareholders may have their voting rights increased. Further, the directors have the authority to require from any shareholder certain information for the purpose of determining whether that shareholder's voting rights are to be reduced. Failure to respond to such a notice, or submitting incomplete or inaccurate information, gives the directors discretion to disregard all votes attached to that shareholder's shares.

The insurance law of Maryland, the domiciliary state of Platinum US, prevents any person from acquiring control of us or of Platinum US unless that person has filed a notification with specified information with the Commissioner and has obtained the Commissioner's prior approval. Under the Maryland statute, acquiring 10% or more of the voting stock of an insurance company or its parent company is presumptively considered a change of control, although such presumption may be rebutted. Accordingly, any person who acquires, directly or indirectly, 10% or more of the voting securities of Platinum Holdings without the prior approval of the Commissioner will be in violation of this law and may be subject to injunctive action requiring the disposition or seizure of those securities by the Commissioner or prohibiting the voting of those securities and to other actions determined by the Commissioner. In addition, many U.S. state insurance laws require prior notification of state insurance departments of a change in control of a non-domiciliary insurance company doing business in that state. While these pre-notification statutes do not authorize the state insurance departments to disapprove the change in control, they authorize regulatory action in the affected state if particular conditions exist such as undue market concentration. Any future transactions that would constitute a change in control of Platinum Holdings may require prior notification in those states that have adopted pre-acquisition notification laws.

Common shares may be offered or sold in Bermuda only in compliance with the provisions of the Investment Business Act 2003 of Bermuda. In addition, sales of common shares to persons resident in Bermuda for Bermuda exchange control purposes may require the prior approval of the Authority. Consent under the Exchange Control Act 1972 of Bermuda (and its related regulations) has been obtained from the Authority for the issue and transfer of the common shares between non-residents of Bermuda for exchange control purposes, provided our shares remain listed on an appointed stock exchange, which includes the NYSE. In giving such consent, neither the Authority nor the Registrar of Companies accepts any responsibility for the financial soundness of any proposal or for the correctness of any of the statements made or opinions expressed herein or therein.

The foregoing provisions of our Amended and Restated Bye-laws and legal restrictions will have the effect of rendering more difficult or discouraging unsolicited takeover bids from third parties or the removal of incumbent management.

None.

Item 2. Properties

Platinum Holdings and Platinum Bermuda lease office space in Pembroke, Bermuda, where our principal executive office is located. Platinum US and all other U.S.-based subsidiaries are located in office space we lease in New York. Platinum US also leases office space in Chicago. Platinum UK Services Company Limited leases office space in London. We renew and enter into new leases in the ordinary course of business and anticipate no difficulty in extending our leases or obtaining comparable office facilities in suitable locations. We consider our facilities to be adequate for our current needs.

Item 3. Legal Proceedings

In the normal course of business, we may become involved in various claims and legal proceedings. We are not currently aware of any pending or threatened material litigation.

Item 4. Removed and Reserved

- 25 -

PART II

Item 5. Market For Registrant's Common Equity, Related Shareholder Matters and Issuer Purchases of Equity Securities

Market Information, Holders and Dividends

At January 31, 2011, there were approximately 51 holders of record of our common shares, not including beneficial owners of shares registered in nominee or street name, which are listed on the NYSE under the symbol "PTP." On February 11, 2011, the last reported sale price for our common shares on the NYSE was \$43.79 per share. The following table shows the high and low per share trading prices of our common shares during each quarter, as reported on the NYSE for the periods indicated:

Year	Price Range of Common Shares	
	High	Low
2010:		
Fourth Quarter	\$ 45.80	\$ 42.10
Third Quarter	\$ 44.04	\$ 35.63
Second Quarter	\$ 39.28	\$ 35.06
First Quarter	\$ 38.89	\$ 34.60
2009:		
Fourth Quarter	\$ 39.45	\$ 34.63
Third Quarter	\$ 36.87	\$ 28.07
Second Quarter	\$ 30.67	\$ 27.12
First Quarter	\$ 36.12	\$ 25.18

During the years ended December 31, 2010 and 2009, we paid quarterly cash dividends of \$0.08 per common share. Our Board of Directors has declared a dividend for the first quarter of 2011 of \$0.08 per common share, payable on March 31, 2011 to shareholders of record at the close of business on March 1, 2011. The declaration and payment of common share dividends is at the discretion of the Board of Directors and depends upon our results of operations, cash flows, the financial positions and capital requirements of Platinum Bermuda and Platinum US, general business conditions, legal, tax and regulatory restrictions on the payment of dividends and other factors the Board of Directors deems relevant.

The laws of the various jurisdictions in which our subsidiaries are organized restrict the ability of our subsidiaries to pay dividends to Platinum Holdings. See Item 1, "Business – Regulation," in this Form 10-K.

Purchases of Equity Securities by Us

The following table summarizes our purchases of our common shares during the three months ended December 31, 2010:

Period	Total Number of Shares Purchased	Average Price paid per Share (1)	Total Number of Shares Purchased as Part of a Publicly	Maximum Dollar Value of Shares that May Yet Be Purchased Under
--------	----------------------------------	----------------------------------	--	--

			Announced Program (2)	the Program
October 1, 2010 – October 31, 2010(3)	150,000	\$ 43.41	150,000	\$ 247,827,659
November 1, 2010 – November 30, 2010	639,994	44.02	639,994	219,654,403
December 1, 2010 – December 31, 2010	895,720	45.08	895,720	179,272,695
Total	1,685,714	\$ 44.53	1,685,714	\$ 179,272,695

(1) Including commissions.

(2) On August 4, 2004, our Board of Directors established a program authorizing the repurchase of our common shares. Since that date, our Board of Directors has approved increases in the repurchase program from time to time, most recently on February 16, 2011, to result in authority as of such date to repurchase up to a total of \$250.0 million of our common shares.

(3) On October 13, 2010, the Company entered into an agreement to purchase, for an aggregate of \$98.5 million in cash, the common share options issued to The St. Paul Companies, Inc., now a part of The Travelers Companies, Inc. (“Travelers”) in connection with the Company’s initial public offering in 2002. The options provided Travelers with the right to purchase 6,000,000 common shares from the Company for \$27.00 per share and were subsequently amended to provide for net share settlements. The options were purchased under the Company’s share repurchase program and were cancelled. The purchase price of \$98.5 million reduced the dollar value of shares that may be purchased under the share repurchase program, however the options purchased were not included in the shares purchased during October as no shares were issued.

Performance Graph

The following graph compares cumulative total return on our common shares with the cumulative total return on the S&P 500 Composite Stock Price Index (the “S&P 500 Index”) and the S&P 500 Property & Casualty Industry Insurance Group Stock Price Index (the “S&P 500 Property & Casualty Insurance Index”), for the period that commenced December 31, 2005 and ended on December 31, 2010. The graph shows the value as of December 31 of each calendar year of \$100 invested on December 31, 2005 in our common shares, the S&P 500 Index, and the S&P 500 Property & Casualty Insurance Index as measured by the last sale price on the last trading day of each such period.

Total Return to Shareholders
Comparison of Cumulative Five Year Total Return

	Indexed Returns *				
	Years Ended December 31,				
	2006	2007	2008	2009	2010

* Index value as of December 31, 2005 – \$100.00

The foregoing performance graph shall not be deemed to be “soliciting material” or “filed” with the SEC or incorporated by reference in any previous or future document filed by the Company with the SEC under the Securities Act or the Exchange Act, except to the extent that the Company specifically incorporates such Performance Graph by reference in any such document.

Item 6.

Selected Financial Data

The following table sets forth certain of our selected financial data as of and for the years ended December 31, 2010, 2009, 2008, 2007, and 2006. Our data as of December 31, 2010 and 2009 and for the years ended December 31, 2010, 2009 and 2008 were derived from our consolidated financial statements beginning on page F-1 of this Form 10-K. Our data as of December 31, 2008, 2007 and 2006 and for the years ended December 31, 2007 and 2006 were derived from our audited consolidated financial statements not included in this Form 10-K. You should read the selected financial data in conjunction with our consolidated financial statements as of December 31, 2010 and 2009 and for each of the years in the three year period ended December 31, 2010 beginning on page F-1 of this Form 10-K, and the related "Management's Discussion and Analysis of Financial Condition and Results of Operations" beginning on page 28 of this Form 10-K.

Five-Year Summary of Selected Financial Data
(in thousands, except per share amounts)

	As of and for the years ended December 31,				
	2010	2009	2008	2007	2006
Statement of Operations Data:					
Net premiums written	\$760,589	\$897,834	\$1,037,565	\$1,119,807	\$1,176,613

Book value per common share	\$50.20	\$45.22	\$34.58	\$34.04	\$28.33
Fully converted book value per common share	\$47.48	\$41.58	\$32.27	\$32.32	\$27.65

In presenting the Company's results, management has included certain schedules containing financial measures that are not calculated under standards and rules that comprise U.S. GAAP. Such measures, including segment underwriting income or loss, related underwriting ratios, book value per common share and fully converted book value per common share, are referred to as non-GAAP. These non-GAAP measures may be defined or calculated differently by other companies. Management believes these measures, which are used to monitor the results of operations, allow for a more complete understanding of the underlying business. These measures should not be viewed as a substitute for those determined in accordance with U.S. GAAP. Reconciliations of such measures to the most comparable U.S. GAAP figures are included within this Form 10-K in accordance with Regulation G.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis should be read in conjunction with the consolidated financial statements and related notes thereto included in this Form 10-K. This Form 10-K contains forward-looking statements that involve risks and uncertainties. Please see the "Note on Forward-Looking Statements" on page 1 of this Form 10-K. Our consolidated financial statements have been prepared in accordance with U.S. GAAP. Management has included certain schedules containing financial measures that are not calculated under standards and rules that comprise U.S. GAAP, see Item 6. for additional information.

Overview

We had \$2.1 billion in capital as of December 31, 2010 as compared with \$2.3 billion as of December 31, 2009. Our net income was \$215.5 million, \$383.3 million, and \$226.2 million for the years ended December 31, 2010, 2009, and 2008, respectively. Net income for the year ended December 31, 2010 reflects disciplined underwriting, strong investment results and net favorable development partially offset by higher than expected catastrophe activity. Our net premiums written for the years ended December 31, 2010, 2009, and 2008 were \$760.6 million, \$897.8 million, and \$1.0 billion, respectively. The decreases in net premiums written were primarily due to the non-renewal of business that fell below our minimum pricing standards.

Economic Conditions

Periods of moderate economic growth or recession tend not to adversely affect our operations. Periods of moderate inflation or deflation also tend not to adversely affect our operations. However, periods of severe inflation or deflation or prolonged periods of recession may adversely impact our results of operations or financial condition. Management considers the potential impact of economic trends in the estimation process for establishing unpaid losses and LAE and in determining our investment strategies.

Reinsurance Industry Conditions and Trends

The reinsurance industry has historically been cyclical, characterized by periods of price competition due to excessive underwriting capacity as well as periods of favorable pricing due to shortages of underwriting capacity. Cyclical trends in the industry and the industry's profitability can also be significantly affected by volatile developments, including natural and other catastrophes. Property and casualty reinsurance rates often rise in the aftermath of significant catastrophe losses. To the extent that actual claim liabilities are higher than anticipated, the industry's capacity to write new business diminishes. The reinsurance industry is also affected by changes in the propensity of courts to expand insurance coverage and grant large liability awards. Fluctuations in interest rates, credit spreads, liquidity, inflation and other changes in the economic environment can also affect the fair values of investments and impact the industry's underwriting capacity.

In 2005, an unprecedented level of hurricane losses caused many reinsurers to report significant net losses after which rating agencies imposed higher capital requirements. Both reinsurers and their clients reassessed their catastrophe pricing parameters and procedures. The result was an increase in catastrophe pricing, particularly for wind exposures in the United States, in 2006 and the beginning of 2007. A number of new companies were formed to take advantage of the improved pricing. The combination of additional capacity and a lack of major catastrophe activity in 2006 and 2007 led to a decline in pricing for catastrophe exposed reinsurance in the second half of 2007. After initially stabilizing, non-catastrophe pricing weakened in late 2006 and continued to decline through the first half of 2008. During the second half of 2008, the financial markets experienced significant adverse credit events and a loss of liquidity and the 2008 hurricane season resulted in substantial losses to the insurance and reinsurance industry, which reduced the amount of capital in the insurance industry. Many reinsurance companies reported strong financial results for 2009 reflecting the absence of major catastrophes and the favorable performance of their investment portfolios during the year. In 2010, many reinsurance companies performed well, with significant growth in shareholders' equity, despite increased catastrophe activity.

Current Outlook

We anticipate that 2011 will be characterized by ample capacity for insurance risk and that risk adjusted pricing will come under downward pressure in all lines of business that have not recently experienced significant losses.

For the Property and Marine segment, absent a major event, we expect that reinsurance rates will further deteriorate over the course of the year. Assuming only modest rate declines, we expect to write a similar amount of property and marine business during 2011 compared with the amount we wrote in 2010. We expect that property and marine business will continue to represent a large proportion of our overall book of business, which could result in increased volatility in our results of operations.

For our Casualty segment, we believe that underlying primary insurance rate increases are generally lower than the trend in loss costs would indicate is appropriate and that capacity for casualty insurance and reinsurance will remain abundant during 2011. We expect that select casualty reinsurance treaties will offer adequate returns during 2011, however the amount of business we write in our Casualty segment will likely decrease during 2011 compared with the amount we wrote in 2010.

We expect a relatively low level of demand for products in our Finite Risk segment in 2011.

Critical Accounting Estimates

The preparation of consolidated financial statements in accordance with U.S. GAAP requires us to make estimates and assumptions that are inherently subjective in nature that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosures of contingent liabilities. Actual results may differ materially from these estimates. Our critical accounting estimates used in the preparation of our consolidated financial statements include premiums written and earned, unpaid losses and LAE, valuation of investments and income taxes. In addition, estimates are used to evaluate risk transfer for assumed and ceded reinsurance transactions.

Premiums Written and Earned

Assumed reinsurance premiums earned are recognized as revenues, net of any related ceded retrocessional coverage purchased. Both assumed and ceded premiums written are recognized as earned generally on a basis proportionate with the coverage period. Assumed premiums written not yet recognized as revenue are recorded on the consolidated balance sheets as unearned premiums; ceded premiums written not yet earned are recorded on the consolidated balance sheets as prepaid reinsurance premiums. Premiums receivable include premiums that have been reported and billed and are in the course of collection (reported premiums receivable) and an estimate of premiums not yet reported by our ceding companies (estimated premiums receivable). Unearned premiums and estimated premiums receivable are estimates based on estimated written premiums and are subject to judgment and uncertainty.

Due to the nature of reinsurance, ceding companies routinely report and remit premiums subsequent to the contract coverage period. Consequently, premiums written include amounts reported by the ceding companies, supplemented by our estimates of premiums that are written but not reported. In addition, we estimate the unearned portion of the premiums. Earned premiums, which are recorded in revenues, are the premiums written less the unearned premiums. The premium estimation process considers the terms and conditions of the reinsurance contracts and assumes that the contracts will remain in force until expiration. The estimation of written premiums could be affected by early cancellation, election of contract provisions for cut-off and return of unearned premiums or other contract disruptions. The time lag involved in the process of reporting premiums is shorter than the lag in reporting losses. Premiums are generally reported in full within two years from the inception of the contract. The potential net impact on the results of operations of changes in premiums earned is reduced by the accrual of losses and acquisition expenses related to such premiums earned. Any adjustments to written and earned premiums are accounted for as changes in estimates and are reflected in the results of operations in the period in which they are made. Any adjustments could be material and could significantly impact earnings in the period they are recorded.

When estimating premiums written and unearned premiums, we segregate the business into classes by reinsurance subsidiary, by type of coverage and by type of contract (resulting in approximately 65 classes). Within each class, business is further segregated by the year in which the contract incepted (the "Underwriting Year"), starting with 2002, our first year of operations. Classes that are similar in both the nature of their business and estimation process may be grouped for purposes of estimating premiums. Estimates are made for each class or group of classes and Underwriting Year. Premiums are estimated based on ceding company estimates and our own judgment after considering factors such as: (1) the ceding company's historical premium versus projected premium, (2) the ceding company's history of providing accurate estimates, (3) anticipated changes in the marketplace and the ceding company's competitive position therein, (4) reported premiums to date and (5) the anticipated impact of proposed underwriting changes. Estimates of ultimate premium are made by our underwriters for each contract and Underwriting Year. Management reviews these estimates with our underwriters and actuaries and selects an ultimate premium estimate. Estimates of premiums written and unearned premiums are based on the selected ultimate premium estimate and the structure of the reinsurance contracts. We evaluate the appropriateness of these estimates in light of the actual premium reported by the ceding companies, information obtained during audits and other information received from ceding companies.

The following table sets forth our estimated and reported premiums receivable as of December 31, 2010 and 2009, respectively (\$ in thousands):

	December 31,	
	2010	2009
Estimated premiums receivable	\$ 141,818	\$ 249,135
Reported premiums receivable	20,864	20,777

Total premiums receivable	\$ 162,682	\$ 269,912
---------------------------	------------	------------

Estimated premiums receivable at December 31, 2010 was lower than at December 31, 2009 due to a decrease in both the property and marine and casualty business written in 2010 as compared with 2009.

As of December 31, 2010, the selected estimates of premiums receivable and unearned premiums were lower than the initial estimates made by our underwriters by \$22.6 million or 12.2% and \$10.2 million or 6.2%, respectively. We believe that we reasonably could have made an adjustment of between \$0 and \$22.6 million for premiums receivable and between \$0 and \$10.2 million for unearned premiums. Key factors that affect premium estimates of our underwriters include: (1) the increased competition and lower rate level in many classes of business that make it difficult for ceding companies to achieve their premium targets, and (2) the lack of a historical track record for some ceding companies writing new programs.

Certain of our reinsurance contracts include provisions that adjust premiums based upon the loss experience of the contracts. We take these provisions into account when determining our estimate of premiums written and unearned premiums. Reinstatement premiums are the premiums charged for the restoration of the reinsurance limit of a reinsurance contract to its full amount, generally coinciding with the payment by the reinsurer of losses. These premiums relate to and are earned over the future coverage obtained for the remainder of the contract term. Any unearned premiums existing at the time a contract limit is exhausted or reinstated is earned immediately. Additional premiums are premiums that are triggered by losses and are earned immediately. Premiums written and unearned premiums include estimates of reinstatement premiums and additional premiums based on reinsurance contract provisions and loss experience and rely on the estimates of unpaid losses and LAE.

An allowance for uncollectible premiums is established for possible non-payment of premiums receivable, as deemed necessary. We analyze whether an allowance is deemed necessary based on our historical experience, the general profile of our ceding companies and our ability in most cases to contractually offset premiums receivable against losses and LAE and commission amounts payable to the same parties.

Unpaid Losses and Loss Adjustment Expenses

Overview

Unpaid losses and LAE are estimates of future amounts required to pay losses and LAE for claims under our assumed reinsurance contracts that have occurred at or before the balance sheet date. Unpaid losses and LAE include estimates of the cost of reported claims not yet paid, generally referred to as “case reserves”, and IBNR.

Our actuaries prepare estimates of our ultimate liability for unpaid losses and LAE based on various actuarial methods including the loss ratio method, the Bornhuetter-Ferguson method and the chain ladder method, which are discussed below. We believe that the quantitative actuarial methods used to estimate our liabilities are enhanced by management’s professional judgment. We review the actuarial estimates of our liability and determine our best estimate of the liabilities to record as unpaid losses and LAE in our consolidated financial statements. We use the same processes and procedures for estimating unpaid losses and LAE for annual and interim periods.

We do not establish liabilities for unpaid losses and LAE until the occurrence of an event that may give rise to a loss. If an event has occurred that we believe will lead to significant losses to us but has not resulted in reported losses before the balance sheet date, we will generally estimate the impact of the event and consider it when estimating our liability for unpaid losses and LAE. When an event of significant magnitude occurs, such as a property catastrophe event that affects many of our ceding companies, we may establish liabilities specific to such an event. Estimated ultimate losses related to a catastrophe event may be based on our estimated exposure to an industry loss and may rely on the use of catastrophe modeling software.

We receive information from ceding companies regarding our liability for unpaid losses and LAE. This information varies but typically includes information regarding the ceding company’s paid losses and case reserves and may include a ceding company’s estimate of IBNR. We may increase or decrease case reserves based on receipt of additional information from the ceding companies. Adjustments that we make to reported case reserves are generally referred to as “additional case reserves.”

Unpaid losses and LAE represent our best estimate of the costs of claims incurred, and it is possible that our ultimate liability may differ materially from such estimate. We review our estimate of unpaid losses and LAE quarterly. Any adjustments of prior years’ estimates of unpaid losses and LAE are accounted for as changes in estimates and are reflected in our results of operations in the period in which they are made.

The liabilities recorded on our consolidated balance sheets as of December 31, 2010 and 2009 for unpaid losses and LAE were \$2.2 billion and \$2.3 billion, respectively. These amounts exclude any amounts we may recover from our retrocessionaires under coverage we purchased for such losses. We record estimates of amounts we expect to recover from retrocessionaires as assets on the consolidated balance sheet. The following table sets forth our case reserves, additional case reserves and IBNR by segment as of December 31, 2010 and 2009 (\$ in thousands):

	Property and Marine	Casualty	Finite Risk	Total
December 31, 2010				
Case reserves	\$241,142	\$378,017	\$37,601	\$656,760
Additional case reserves	4,376	10,710	–	15,086
IBNR	286,577	1,209,113	49,842	1,545,532
Total unpaid losses and LAE	\$532,095	\$1,597,840	\$87,443	\$2,217,378

December 31, 2009				
Case reserves	\$238,996	\$387,319	\$42,887	\$669,202
Additional case reserves	(1,124)	12,409	–	11,285
IBNR	246,645	1,353,531	68,673	1,668,849
Total unpaid losses and LAE	\$484,517	\$1,753,259	\$111,560	\$2,349,336

Since we rely on information regarding paid losses, case reserves and sometimes IBNR provided by ceding companies in estimating our ultimate liability for unpaid losses and LAE, we perform certain procedures in order to help determine the completeness and accuracy of such information. Periodically, management assesses the reporting activities of these ceding companies on the basis of qualitative and quantitative criteria. These procedures include conferring with ceding companies or brokers on claims matters. Our claims personnel, or consultants engaged by us, may also conduct periodic audits of our ceding companies to: (1) review and establish validity of specific claims, (2) determine that case reserves established by the ceding company are reasonable, (3) assure that there is consistency in claim reporting from period to period, and (4) assess the overall claims practices and procedures of the ceding company. We also monitor the claims handling and reserving practices of ceding companies in order to help establish the proper reinsurance premium for reinsurance contracts with such ceding companies.

Non-Catastrophe Reserves

Non-catastrophe reserves were \$1.9 billion as of December 31, 2010, representing 86% of our unpaid losses and LAE. When estimating unpaid losses and LAE, we segregate the business into classes by reinsurance subsidiary, by type of coverage and by type of contract (resulting in approximately 65 classes). Within each class, the business is further segregated by Underwriting Year, starting with 2002, our first year of operations.

Our actuaries calculate multiple point estimates of our liability for losses and LAE using a variety of actuarial methods for many, but not all, of our classes for each Underwriting Year. We do not believe that these multiple point estimates are or should be considered a range. Our actuaries consider each class and determine the most appropriate point estimate for each Underwriting Year based on the characteristics of the particular class including: (1) loss development patterns derived from historical data, (2) the credibility of the selected loss development pattern, (3) the stability of the loss development patterns and (4) the observed loss development of other underwriting years for the same class. Our actuaries also consider other relevant factors, including: (1) historical ultimate loss ratios, (2) the presence of individual large losses and (3) known occurrences that have not yet resulted in reported losses.

We believe that a review of individual contract information improves the loss estimates for some classes of business. Our actuaries make their determinations of the most appropriate point estimate of loss for each class based on an evaluation of relevant information and do not ascribe any particular portion of the estimate to a particular factor or consideration. These estimates are aggregated for review by management and, after approval, are the basis for our liability for unpaid losses and LAE.

Generally, estimates of ultimate losses that are not related to a specific event are initially determined based on the loss ratio method applied to each Underwriting Year and to each class of business. The selected ultimate losses are determined by multiplying the initial expected loss ratio by the earned premium. The initial expected loss ratios are key inputs that involve management judgment and are based on a variety of factors, including: (1) contract by contract expected loss ratios developed during our pricing process, (2) our historical loss ratios and combined ratios (loss plus acquisition cost ratios), and (3) when available, updated and appropriately adjusted, loss information from Travelers on business previously underwritten by St. Paul Re, which was a part of The St. Paul Companies, Inc., (“St. Paul Re”), for the reasons described below. These judgments take into account management’s view of past, current and future factors that may influence ultimate losses, including: (1) market conditions, (2) changes in the business underwritten, (3) changes in timing of the emergence of claims and (4) other factors that may influence ultimate loss ratios and losses.

Over time, as a greater number of claims are reported, actuarial estimates of IBNR are based on the Bornhuetter-Ferguson and the chain ladder techniques. The loss development pattern is a key input to these techniques. The Bornhuetter-Ferguson technique utilizes actual reported losses, a loss development pattern and the initial expected loss ratio to determine an estimate of ultimate losses. We believe this technique is most appropriate when there are few reported claims and a relatively less stable loss development pattern. The chain ladder technique utilizes actual reported losses and a loss development pattern to determine an estimate of ultimate losses that is independent of the initial expected ultimate loss ratio and earned premium. We believe this technique is most appropriate when there are a large number of reported losses with significant statistical credibility and a relatively stable pattern of reported losses. The determination of when reported losses are sufficient and credible to warrant selection of an ultimate loss ratio different from initial expected loss ratio also requires judgment. We generally make adjustments for reported loss experience indicating unfavorable variances from initial expected loss ratios sooner than reported loss experience indicating favorable variances. This is because the reporting of losses in excess of expectations tends to have greater credibility than an absence or lower than expected level of reported losses.

While we commenced operations in 2002, the business we write is sufficiently similar to the historical reinsurance business of St. Paul Re such that we review the historical loss experience of this business when we estimate our own initial expected loss ratios and loss development patterns. This historical loss experience was made available to us in connection with our initial public offering. Loss development patterns can span more than a decade, therefore, the St. Paul Re data is a valuable supplement to our own and industry data. The historical experience of St. Paul Re also included information on the administrative costs of managing claims and the related ULAE factors. During the third quarter of 2010, we conducted a detailed review of these ULAE reserve factors and concluded that administrative costs of managing claims paid since our inception had reached sufficient credibility for us to change our previously selected factors to reflect our own experience, resulting in a \$13.2 million reduction of ULAE reserves.

Loss development patterns are determined utilizing actuarial analysis, including management's judgment, and are based on loss development patterns of paid losses and reporting of case reserves to us, as well as industry loss development patterns. Information that may cause future loss development patterns to differ from historical loss development patterns is considered and reflected in our selected loss development patterns as appropriate. For property and health coverages these patterns indicate that a substantial portion of the ultimate losses are reported within two to three years after the contract is effective. Casualty loss development patterns can vary from three years to over twenty years depending on the type of business.

In property lines, the loss development patterns are based on historical reported loss data. For all lines, historical data by effective date and business type is used to determine loss development patterns that reflect each year's reinsurance contract inception date distribution and the distribution of underlying business written on a losses occurring basis versus on a risk attaching basis. In marine lines, the loss development patterns are primarily based on historical reported loss data. Loss development patterns are analyzed for various reinsurance sub-classes and an overall pattern is determined by the mix of business within each Underwriting Year.

In the North American casualty excess-of-loss classes, the loss development patterns are primarily based on our historical reported loss data and that of St. Paul Re, both of which are supplemented by industry data from the Reinsurance Association of America ("RAA") and Insurance Services Offices, Inc. ("ISO"). Due to the long loss development pattern in general liability, various sources are used to estimate the end of the loss development pattern referred to as the "tail". To estimate the tail, we supplement our historical data, and the available St. Paul Re data, with industry data, generally from the RAA.

We analyze historical loss development patterns and may adjust them for observed anomalies. For example, we observed that loss development patterns were much slower in Underwriting Years that were characterized by especially intense competition, known as the “soft market,” particularly in the North American excess-of-loss claims made class. We believe this is due to multiple year policies written by ceding companies and the deterioration in underwriting standards during these periods. In determining our loss development patterns for certain classes, we may exclude certain historical data from the soft market years because none of our business was written in these soft market periods. However, one of the risks of excluding some of the years is that we could be obscuring trends in loss development patterns. Our actuaries consider this when determining the credibility of indications that use these patterns. For certain reinsurance contracts, appropriate historical loss development patterns may be developed from ceding company data or other sources.

Catastrophe Reserves

Generally, an event causing more than \$1 billion of property losses to the insurance industry or \$10 million of property losses to the Company is considered and tracked as a major catastrophe. Unpaid losses and LAE related to major catastrophes were \$304.1 million, which represented 14% of our total unpaid losses and LAE as of December 31, 2010.

Our underwriters will typically prepare an initial estimate of our ultimate losses for a catastrophe event on a contract-by-contract basis. This estimate is typically based on estimates of losses for the insurance industry as a whole, estimates of losses prepared by ceding companies, estimates of market share of our ceding companies and, in certain cases, output from catastrophe models. Information is typically updated as it becomes available. Our actuaries and underwriters will also consider a variety of factors, including: (1) the credibility of ceding company estimates, (2) whether the ceding company estimates include IBNR and (3) whether the ceding company information is current. After reviewing loss estimates and other information with our underwriters, our actuaries make an estimate of ultimate loss.

As losses from catastrophes mature, our actuaries generally consider losses reported to us relative to loss development patterns from prior catastrophe events. Our estimate of ultimate liability for losses and LAE related to a catastrophe event will generally be based on these development patterns after approximately twelve months following the event. However, since loss development patterns may be inconsistent between events, for very large catastrophes, such as Hurricane Katrina in 2005, we will generally review information on a contract-by-contract basis for a longer period. Ultimate losses for a catastrophe event are typically reasonably well known within 12 to 24 months following the event, although ultimate losses from an earthquake may take longer to develop. As of December 31, 2010, the paid and reported losses as a percentage of the current estimated ultimate loss were 30% and 76%, respectively, for the February 27, 2010 earthquake in Chile and 1% and 8%, respectively, for the September 3, 2010 earthquake in New Zealand.

In addition to the earthquakes in Chile and New Zealand, in 2010 we established specific reserves for major catastrophes that included flooding in Australia, Windstorm Xynthia, and two U.S. catastrophe events referred to by Property Claim Services, a division of ISO, as Catastrophes 14 and 96. In 2009, we established specific reserves for major catastrophes that included floods in Ireland (“Irish Floods”), Hailstorm Wolfgang, Winterstorm Klaus and three U.S. catastrophe events referred to by Property Claim Services as Catastrophes 63, 68 and 78. In 2008, we established specific reserves for major catastrophes including Winterstorm Emma, Hurricane Gustav, Hurricane Ike and two U.S. catastrophe events referred to by Property Claim Services as Catastrophes 42 and 43. We also have established specific reserves for catastrophe events in prior years, which include Hurricane Katrina.

Uncertainty of Estimates

The ultimate liability for unpaid losses and LAE may vary materially from our current estimates for several reasons. Our estimates are inherently uncertain because they are affected by factors that are highly dependent on judgment. There are numerous other factors that add uncertainty to our estimates of losses, the more significant of which include: (1) our estimates are based on predictions of future developments and estimates of future trends in claim severity and frequency, (2) the reliance that we necessarily place on ceding companies for claims reporting, (3) the associated time lag in reporting losses, (4) the need to estimate an initial expected loss ratio before significant loss experience is reported, (5) the low frequency/high severity nature of some of our business and (6) the varying reserving practices among ceding companies.

Our estimates are based on assumptions that historical loss development and trends are reasonably predictive of how losses will develop in the future when reported. New or updated information or loss data may impact our selection of ultimate loss ratios in subsequent periods. There are various elements of updated loss data and related information that may result in a materially different estimate of ultimate losses. The four most significant inputs to our loss estimation process are: (1) reported losses to date, (2) the initial expected loss ratio, (3) the loss development patterns and (4) earned premiums.

The frequency and severity of reported losses relative to anticipated frequency and severity of losses is one of the most influential factors and is largely dependent on the loss experience of our ceding companies. Reported loss experience is a key input to our loss estimation process and, if loss experience reported in periods subsequent to estimating the ultimate losses are materially greater or less than anticipated, we may adjust the ultimate loss ratio accordingly. Adjustments to increase or decrease a prior year's ultimate loss ratio are generally referred to as unfavorable or favorable loss development.

The initial expected loss ratios are key inputs to our loss estimation process, are derived from historical data and involve a high degree of judgment. The selection of the initial expected loss ratios also takes into account management's view of past, current and future factors that may influence expected ultimate losses. Because of the high degree of judgment required in establishing initial expected loss ratios, there is uncertainty in the resulting estimates.

The loss development patterns are also key inputs to our loss estimation process. Loss development patterns reflect the time lag between the occurrence and settlement of a loss. The time lag in reporting can be several years in some cases and may be attributed to a number of reasons, including the time it takes to investigate a claim, delays associated with the litigation process, and the deterioration, in connection with health related claims, in a claimant's physical condition many years after an accident occurs. As a predominantly broker market reinsurer for both excess-of-loss and proportional contracts, we are subject to potential additional time lags in the receipt of information as the primary insurer reports to the broker who in turn reports to us. As of December 31, 2010, we did not have any significant back-log related to our processing of assumed reinsurance information. All of the foregoing factors can impact the loss development patterns. A key assumption that our estimates are based on is that past loss development patterns are reasonably predictive of future loss development patterns. However, it may be difficult to identify differences in business reinsured from Underwriting Year to Underwriting Year and how such differences can affect loss development patterns. This difficulty adds to uncertainty in estimates that use these patterns.

In property classes, there can be additional uncertainty in loss estimation related to large catastrophe events. With wind events, such as hurricanes, the damage assessment process may take more than a year. The cost of rebuilding may increase due to supply shortages for construction materials and labor. In the case of earthquakes, the damage assessment process may take several years to discover structural weaknesses not initially detected in buildings. The uncertainty inherent in loss estimation is particularly pronounced for casualty coverages, such as umbrella liability, general and product liability, professional liability and automobile liability, where information, such as required medical treatment and costs for bodily injury claims, emerges over time. In the overall loss estimation process, provisions for economic inflation and changes in the social and legal environment are considered.

Changes in estimates of prior years' earned premiums can also affect prior years' ultimate losses. Our actuaries consider factors affecting all key inputs to actuarial techniques when determining the credibility of indications.

Unpaid losses and LAE is an estimate that reflects many reasonable possible outcomes. In the following two sections, we discuss two types of uncertainty with respect to loss estimation. Under Variability of Outcomes, we discuss how estimates change over time as new information or loss data develops. Under Sensitivity of Estimates, we demonstrate that alternative reasonable estimates can be made with current information.

Variability of Outcomes

The liability for unpaid losses and LAE as of the balance sheet date represents management's best estimate of the ultimate liabilities as of that date. The actuarial techniques used by our actuaries in estimating our liabilities produces a central estimate of ultimate losses and LAE for each class and underwriting year. These techniques do not produce a range of reasonably possible outcomes. For some classes, the ultimate value of the liability for unpaid losses and LAE will not be known for many decades. We expect that the ultimate value will differ from current estimates as losses are reported and paid and that difference could be material as reported losses reflect the actual emergence of factors that influence claim costs. We believe, however, that as a greater percentage of losses are reported, the likelihood of material changes to ultimate losses declines. Each quarter, we re-estimate ultimate losses and LAE and reflect updated information in those estimates.

During the years ended December 31, 2010, 2009, and 2008, we experienced net favorable loss development of \$158.9 million, \$100.8 million, and \$167.2 million, respectively. This net favorable loss development was attributable primarily to a level of cumulative losses reported to us by our ceding companies that was lower than expected and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios and reduce estimated ultimate losses. During 2010, 2009, and 2008, approximately \$145.7 million, \$94.9 million, and \$154.4 million, respectively, of the total net favorable development was attributable to lower reported loss experience than we expected. Conditions and trends that have affected development of reserves in

the past may not necessarily occur in the future. The factors that may result in differences between our current estimates of loss liability and our ultimate loss liability are set forth above under “Uncertainty of Estimates” in this Form 10-K.

Sensitivity of Estimates

Initial expected loss ratios and loss development patterns are key inputs to our loss estimation process. We exercise judgment in establishing key inputs at the beginning of an underwriting year and also as we modify the key inputs, as appropriate, throughout the loss development period. During the years ended December 31, 2010, 2009, and 2008, changes in the initial expected loss ratio and the loss development patterns resulted in net favorable loss development of \$13.2 million, \$5.9 million and \$12.8 million, respectively.

We have selected the initial expected loss ratio and the loss development patterns for sensitivity analysis. Ultimate loss estimates for the North American casualty excess-of-loss classes of business, which generally have the longest loss development patterns, have a higher degree of uncertainty than other reserving classes. IBNR for these classes as of December 31, 2010 was \$1.0 billion, which was 64% of the total IBNR at that date. The estimates of unpaid losses and LAE related to North American casualty excess-of-loss classes of business have a higher degree of uncertainty and, consequently, reasonable alternatives to our selected initial expected loss ratios and loss development patterns could vary significantly. For example, if we increased the initial expected loss ratio for these classes by 5% from 69% to 74%, we would increase the IBNR for these classes by \$48.4 million, which represents approximately 4% of unpaid losses and LAE for these classes as of December 31, 2010, or if we increased the initial expected loss ratio for these classes by 10% from 69% to 79%, we would increase the IBNR for these classes by \$99.9 million, which represents approximately 8% of unpaid losses and LAE for these classes as of December 31, 2010.

As another example of key assumption sensitivity, if we accelerated the estimated loss development patterns related to North American casualty excess-of-loss classes by 5%, we would decrease the IBNR for these classes by \$21.3 million, which is less than 2% of unpaid losses and LAE for these classes as of December 31, 2010, or if we accelerated the loss development patterns by 10%, we would decrease the IBNR for these classes by \$56.6 million, which is approximately 4% of unpaid losses and LAE for these classes as of December 31, 2010.

The sensitivity analysis illustrates how a reasonable alternative assumption could affect the current estimate of our ultimate loss liability. The sensitivity analysis is not intended to present a range of reasonable possible settlement values in the future. Actual settlement values could be materially different from the current estimates. Over time, changes to the initial expected loss ratio and loss development patterns may vary by more than the sensitivity analysis above as new loss information and data emerges.

Valuation of Investments

Fixed maturity securities for which we may not have the intent to hold until maturity are classified as available-for-sale and reported at fair value. Unrealized gains and losses are included in other comprehensive income in the consolidated statements of operations and comprehensive income and in accumulated other comprehensive income in the consolidated statements of shareholders' equity, net of deferred taxes. Fixed maturity securities for which we have the intent to sell prior to maturity or for which we have elected the fair value measurement attributes of the Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 825, "Financial Instruments" are classified as trading securities and reported at fair value, with mark-to-market adjustments included in net realized gains or losses on investments in the consolidated statements of operations and the related deferred income tax included in income tax expense.

We obtain prices for all of our fixed maturity securities, preferred stocks and short-term investments from pricing services, which include index providers, pricing vendors and broker-dealers. As of December 31, 2010, we valued approximately 59% of our investment securities using prices obtained from index providers, 38% using prices obtained from pricing vendors, and 3% using prices obtained from broker-dealers. The number of prices we obtain per instrument varies based on the type of asset class and particular reporting period. Prices are generally obtained from multiple sources when a new security is purchased and a pricing source is assigned to the particular security. A hierarchy is maintained that prioritizes pricing sources based on availability and reliability of information, with preference generally given to prices provided by independent pricing vendors and index providers. Pricing providers may be assigned to a particular security based upon the provider's expertise. Generally, the initial pricing source selected is consistently used for each reporting period. We have not adjusted any prices that we have obtained from pricing services. However, if we determine that a price appears unreasonable, we investigate and assess whether the price should be adjusted.

We periodically receive pricing documentation that describes the methodologies used by various pricing services. The prices we obtain from pricing providers are validated by conducting price comparisons against multiple pricing sources for certain securities as may be available, performing an in-depth review of specific securities when evaluating potential other-than-temporary impairments, periodic back-testing of sales to the previously reported fair value, and continuous monitoring of market data including specific data that relates to our investment portfolio.

Generally, pricing services determine prices by maximizing the use of observable inputs to determine the fair value measurement. The inputs used in index pricing may include, but are not limited to, benchmark yields, transactional data, broker-dealer quotes, security cash flows and structures, credit ratings, prepayment speeds, loss severities, credit risks and default rates. The inputs used by pricing vendors may include, but are not limited to, benchmark yields, reported trades, broker-dealer quotes, issuer spreads, bids, offers and industry and economic events. Broker-dealers value securities through trading desks primarily based on observable inputs. For further discussion on fair values of investments see "Financial Condition – Liquidity – Sources of Liquidity".

We routinely review our available-for-sale investments to determine whether unrealized losses represent temporary changes in fair value or are the result of an other-than-temporary impairment ("OTTI"). The process of determining whether a security is other-than-temporarily impaired requires judgment and involves analyzing many factors. These factors include the overall financial condition of the issuer, the length of time and magnitude of an unrealized loss, specific credit events, the collateral structure and the credit support that may be applicable.

In 2009 we adopted additional guidance under FASB ASC 320, "Investments – Debt and Equity Securities" ("ASC 320"). In accordance with this additional guidance, we recognize the portion of OTTI related to a credit loss in net income and the portion of OTTI related to all other factors in other comprehensive income or loss. The amount of the credit loss of an impaired debt security is the difference between the amortized cost and the greater of (i) the present value of

expected future cash flows and (ii) the fair value of the security. The effect of adoption resulted in a cumulative adjustment to debt securities that were impaired prior to 2009, net of deferred tax, of \$14.2 million that was recorded in accumulated other comprehensive income in the consolidated statement of shareholders' equity.

In accordance with ASC 320, we also consider our intent to sell a security and the likelihood that we will be required to sell a security before an unrealized loss is recovered. Our intent to sell a security is based, in part, on adverse changes in the credit worthiness of a debt issuer, pricing and other market conditions and our anticipated net cash flows. If we determine that we intend to sell a security that is in an unrealized loss position, then the unrealized loss related to such a security, representing the difference between the security's amortized cost and its fair value, is recognized as a net impairment loss in our consolidated statements of operations at the time we determine our intent is to sell.

Income Taxes

We provide for income taxes for our subsidiaries operating in income tax paying jurisdictions. We recognize deferred tax assets and liabilities based on the temporary differences between the financial statement carrying amounts and the tax bases of assets and liabilities. Such temporary differences are primarily due to tax basis discount on unpaid losses and LAE and unearned premiums, deferred policy acquisition costs and investments. A valuation allowance against deferred tax assets is recorded if it is more likely than not that all, or some portion, of the benefits related to deferred tax assets will not be realized.

Net deferred tax assets were \$47.8 million and \$63.1 million for the years ended December 31, 2010 and 2009, respectively. At each balance sheet date, we evaluate the recoverability of the deferred tax assets, considering the timing of the reversal of deferred income and expense items as well as the likelihood that we will generate sufficient taxable income to realize the future tax benefits. We believe that it is more likely than not we will generate sufficient taxable income and realize the future tax benefits in order to recover the deferred assets and accordingly, no valuation allowance was established as of December 31, 2010 or 2009. See Note 8 to the "Notes to Consolidated Financial Statements" contained elsewhere in this Form 10-K for additional information on income taxes.

Risk Transfer for Assumed and Ceded Reinsurance Transactions

Reinsurance accounting is used for assumed and ceded transactions when risk transfer requirements have been met. Risk transfer analysis involves evaluating significant assumptions relating to the amount and timing of expected cash flows, as well as the interpretation of underlying contract terms. Reinsurance contracts that do not transfer sufficient insurance risk are accounted for as deposits and assets or liabilities are initially recorded for the same amount as assets paid or received. Interest income or expense related to the deposit is recognized as incurred. Profit margins are earned over the settlement period of the contractual obligations. As at December 31, 2010 and 2009, we have deposit liabilities of \$8.8 million and \$8.3 million, respectively, included in other liabilities related to an assumed transaction that is accounted for as a deposit.

Results of Operations

Year Ended December 31, 2010 as Compared with the Year Ended December 31, 2009

Net income and diluted earnings per common share for the years ended December 31, 2010 and 2009 were as follows (\$ and amounts in thousands, except earnings per share):

	2010	2009	Net change
Underwriting income	\$ 108,869	\$ 218,188	\$(109,319)
Net investment income	134,385	163,941	(29,556)
Net realized gains on investments	107,791	78,630	29,161
Net impairment losses on investments	(36,610)	(17,603)	(19,007)
Other revenues (expenses)	(55,783)	(55,580)	(203)
Income before income taxes	258,652	387,576	(128,924)
Income tax expense	(43,154)	(4,285)	(38,869)
Net income	215,498	383,291	(167,793)
Preferred dividends	–	(1,301)	1,301
Net income attributable to common shareholders	\$ 215,498	\$ 381,990	\$(166,492)
Weighted average shares outstanding for diluted earnings per common share	45,052	52,315	(7,263)
Diluted earnings per common share	\$ 4.78	\$ 7.33	\$(2.55)

The decrease in net income for the year ended December 31, 2010 as compared with 2009 was primarily due to decreases in net underwriting income and net investment income and an increase in net impairment losses on investments, which was partially offset by an increase in net realized gains on investments. We also had an increase in income tax expense. The decrease in diluted earnings per common share for the year ended December 31, 2010 as compared with 2009 was primarily due to a decrease in net income, partially offset by the repurchase of our common shares. Diluted earnings per common share for the year ended December 31, 2010 was favorably impacted by a decrease in weighted average shares outstanding used to calculate diluted earnings per common share, primarily due to the repurchase of 9,672,231 of our common shares in 2010.

Underwriting Results

Underwriting income consists of net premiums earned, less net losses and LAE, net acquisition expenses and operating costs related to underwriting operations.

Net underwriting income was \$108.9 million and \$218.2 million for the years ended December 31, 2010 and 2009, respectively. The decrease was primarily due to an increase in net underwriting losses arising from major catastrophes, partially offset by an increase in net favorable development and a reduction in our ULAE reserves.

Net losses arising from major catastrophes were \$214.8 million and \$35.5 million for the years ended December 31 2010 and 2009, respectively. Net favorable development was \$151.9 million and \$101.0 million for the years ended December 31, 2010 and 2009, respectively. Net favorable or unfavorable development is the development of prior years' unpaid losses and LAE and the related impact on premiums and commissions. The net favorable development for the year ended December 31, 2010 relating to prior years was in both the Property and Marine and Casualty segments. Additionally, we conducted a review of ULAE reserve factors across all lines of business during the third quarter of 2010. The review involved a detailed analysis of our administrative costs of managing claims since our inception and, in our judgment, we concluded that the amounts paid had reached sufficient credibility for us to change our previously selected ULAE reserve factors. The change in our estimate of the administrative costs of managing claims resulted in a \$13.2 million reduction of ULAE reserves.

We conduct our worldwide reinsurance business through three operating segments: Property and Marine, Casualty and Finite Risk. In managing our operating segments, we use measures such as net underwriting income and underwriting ratios to evaluate segment performance. We do not allocate assets or certain income and expenses such as investment income, net realized gains on investments, net impairment losses on investments, net changes in fair value of derivatives, net foreign currency exchange gains and losses, interest expense and certain corporate expenses by segment. Segment net underwriting income is reconciled to the U.S. GAAP measure of income before income taxes in Note 14 to the "Consolidated Financial Statements" contained elsewhere in this Form 10-K. The measures we used in evaluating our operating segments should not be used as a substitute for measures determined under U.S. GAAP. Our operating segment results are discussed in detail below.

Property and Marine

The Property and Marine operating segment generated 54.3% and 57.6% of our net premiums written in 2010 and 2009, respectively. The following table summarizes underwriting activity and ratios for the Property and Marine segment for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009	Increase (decrease)
Gross premiums written	\$431,612	\$543,851	\$(112,239)
Ceded premiums written	18,937	26,840	(7,903)
Net premiums written	412,675	517,011	(104,336)
Net premiums earned	418,763	528,488	(109,725)
Net losses and LAE	343,509	250,646	92,863
Net acquisition expenses	60,224	66,992	(6,768)
Other underwriting expenses	32,678	37,331	(4,653)
Property and Marine segment underwriting income (loss)	\$(17,648)	\$173,519	\$(191,167)
Ratios:			
Net loss and LAE	82.0	% 47.4	% 34.6 points
Net acquisition expense	14.4	% 12.7	% 1.7 points
Other underwriting expense	7.8	% 7.1	% 0.7 points
Combined	104.2	% 67.2	% 37.0 points

Property and Marine segment underwriting income decreased by \$191.2 million for the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to an increase in net losses arising from major catastrophes, partially offset by an increase in net favorable development. Net losses arising from major catastrophes, net of reinstatement premiums and commissions, were \$214.8 million and \$35.5 million for the years ended December 31, 2010 and 2009, respectively. Net losses arising from major catastrophes for the year ended December 31, 2010 were substantially attributable to the earthquakes in Chile and New Zealand and to a lesser extent flooding in Australia. Net losses arising from major catastrophes for the year ended December 31, 2009 were primarily attributable to the Irish Floods, Hailstorm Wolfgang and Winterstorm Klaus. Net favorable development was \$33.3 million and \$25.1 million for the years ended December 31, 2010 and 2009, respectively. The change in our estimate of the administrative costs of managing claims resulted in a \$1.3 million reduction of ULAE reserves.

Gross premiums written decreased by \$112.2 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009 as a result of fewer opportunities that met our underwriting standards. Gross premiums written included reinstatement premiums of \$17.7 million and \$7.2 million related to major catastrophes for the years ended December 31, 2010 and 2009, respectively. The decrease in gross premiums written was primarily due to a decrease of \$88.8 million in North American crop business for the year ended December 31, 2010 as compared with the same period in 2009. The decrease in ceded premiums written for the year ended December 31, 2010 as compared with the same period in 2009 was primarily the result of a decrease in our purchases of proportional property retrocessional coverage. Net premiums earned decreased by \$109.7 million as a result of reduced net premiums written in the current and prior underwriting years. Net premiums written and earned were also affected by changes in the mix of business and the structure of the underlying reinsurance contracts.

Net losses and LAE increased by \$92.9 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to the increase in losses arising from major catastrophes in 2010. Net losses and

LAE arising from major catastrophes were \$232.4 million and \$42.6 million for the years ended December 31, 2010 and 2009, respectively. The increase in losses from major catastrophes was partially offset by the increase in net favorable loss development. Net favorable loss development was \$36.9 million and \$14.3 million in 2010 and 2009, respectively. Net losses arising from major catastrophes, with related premium adjustments, increased the net loss and LAE ratio by 54.3 points and 7.5 points for the years ended December 31, 2010 and 2009, respectively. Net favorable loss development and related premium adjustments decreased the net loss and LAE ratio by 9.2 points and 3.2 points in 2010 and 2009, respectively. The resulting loss ratio, excluding catastrophes and development, decreased due to a lower proportion of crop business, which had a higher loss ratio than the remainder of the segment, and a higher proportion of catastrophe business, which had a lower loss ratio than the remainder of the segment. Net favorable loss development for the year ended December 31, 2010 was primarily attributable to a level of cumulative losses reported by our ceding companies that was lower than we expected and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios. The change in our estimate of the administrative costs of managing claims in the year ended December 31, 2010 decreased the net loss and LAE ratio by 0.3 points.

The following table sets forth the net favorable (unfavorable) development for the year ended December 31, 2010 by class of business (\$ in thousands):

Class of Business	Net Losses and LAE	Net		
		Acquisition Expense	Net Premiums	Net Development
Property per-risk excess-of-loss	\$22,016	\$ (149)	\$ 1,133	\$ 23,000
Catastrophe excess-of-loss (non-major events)	10,057	222	654	10,933
Crop	16,914	(4,732)	–	12,182
Property proportional	5,802	(414)	–	5,388
Marine, aviation and satellite	(1,776)	(361)	751	(1,386)
Major catastrophes	(16,160)	–	(692)	(16,852)
Total	\$36,853	\$ (5,434)	\$ 1,846	\$ 33,265

Net favorable development in the property per-risk excess-of-loss class arose primarily from the 2007 and 2009 underwriting years. Net favorable development in the catastrophe excess-of-loss (non-major events) class arose primarily from the 2009 underwriting year. Net favorable loss development in the crop class arose primarily from North American business in the 2009 underwriting year. Net favorable development in the property proportional class arose primarily from North American business in the 2005 through 2008 underwriting years. Net unfavorable development in the marine, aviation and satellite class arose primarily from the 2003 and 2006 underwriting years, partially offset by favorable development primarily from the 2007 and 2008 underwriting years. A change in the pattern of expected reported losses in the marine excess-of-loss class contributed \$2.5 million of unfavorable development. Net unfavorable development in the major catastrophes class arose primarily from Hurricane Ike in the 2008 underwriting year.

The following table sets forth the net favorable (unfavorable) development for the year ended December 31, 2009 by class of business (\$ in thousands):

Class of Business	Net Losses and LAE	Net Acquisition Expense	Net Premiums	Net Development
Property per-risk excess-of-loss	\$ 11,932	\$ (181)	\$ 2,125	\$ 13,876
Catastrophe excess-of-loss (non-major events)	13,877	1,284	217	15,378
Major catastrophes	(3,474)	–	349	(3,125)
Crop	(8,783)	5,102	–	(3,681)
Marine, aviation and satellite	(4,294)	330	2,027	(1,937)
Property proportional	5,001	(391)	–	4,610
Total	\$ 14,259	\$ 6,144	\$ 4,718	\$ 25,121

Net favorable development in the property per-risk excess-of-loss class related primarily to the 2006 through 2008 underwriting years. Net favorable development in the catastrophe excess-of-loss (non-major events) class related primarily to the 2008 underwriting year. Net unfavorable development in major catastrophes related primarily to marine losses related to Hurricane Rita in the 2005 underwriting year. Net unfavorable development in the crop class related primarily to the North American business in the 2008 underwriting year. Net unfavorable development in the marine, aviation and satellite class related primarily to the marine business in the 2007 underwriting year. Net favorable development in the property proportional class related primarily to the 2005 through 2007 underwriting years.

Net acquisition expenses and related net acquisition expense ratios were \$60.2 million and 14.4% for the year ended December 31, 2010 and \$67.0 million and 12.7% for the year ended December 31, 2009. The decrease in net acquisition expenses in 2010 as compared with 2009 was primarily due to a decrease in net premiums earned. The increase in the acquisition expense ratio was due to an increase in commissions related to the increase in net favorable loss development and was also impacted by changes in the mix of business.

Other underwriting expenses were \$32.7 million and \$37.3 million for the years ended December 31, 2010 and 2009, respectively. The decrease in 2010 as compared with 2009 was primarily due to a decrease in performance-based compensation in 2010.

Casualty

The Casualty operating segment generated 43.3% and 39.7% of our net premiums written for the years ended December 31, 2010 and 2009, respectively. The following table summarizes underwriting activity and ratios for the

Casualty segment for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009	Increase (decrease)
Net premiums written	\$ 329,397	\$ 356,488	\$(27,091)
Net premiums earned	343,812	388,901	(45,089)
Net losses and LAE	119,679	226,511	(106,832)
Net acquisition expenses	71,474	88,841	(17,367)
Other underwriting expenses	23,091	25,644	(2,553)
Casualty segment underwriting income	\$ 129,568	\$ 47,905	\$ 81,663
Ratios:			
Net loss and LAE	34.8	% 58.2	% (23.4) points
Net acquisition expense	20.8	% 22.8	% (2.0) points
Other underwriting expense	6.7	% 6.6	% 0.1 points
Combined	62.3	% 87.6	% (25.3) points

Casualty segment underwriting income increased by \$81.7 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to an increase in net favorable development, a reduction of ULAE reserves and changes in the mix of business. Net favorable development was \$121.1 million and \$78.1 million for the years ended December 31, 2010 and 2009, respectively. The change in our estimate of the administrative costs of managing claims resulted in a \$11.9 million reduction of ULAE reserves. In addition, in 2009 we had \$18.1 million related to two large loss events as compared with no large loss events in 2010.

Net premiums written decreased by \$27.1 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to decreases in business underwritten in 2010 and 2009 across most casualty classes as a result of fewer opportunities that met our underwriting standards. Net premiums earned decreased by \$45.1 million as a result of the decreases in net premiums written in current and prior underwriting years. Net premiums written and earned were also affected by changes in the mix of business and the structure of the underlying reinsurance contracts.

Net losses and LAE decreased by \$106.8 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to an increase in net favorable loss development, a reduction of ULAE reserves, a reduction in large losses and a decrease in net premiums earned. Net favorable loss development was \$113.3 million and \$73.6 million in 2010 and 2009, respectively. Net favorable loss development and related premium adjustments decreased the net loss and LAE ratios by 33.6 points and 19.0 points in the years ended December 31, 2010 and 2009, respectively. There were no large loss events for the year ended December 31, 2010. For the year ended December 31, 2009, there were losses of \$9.2 million related to an accident and health contract and \$8.9 million from an international liability casualty contract related to liability arising from Australian wildfires. Large losses increased the net loss and LAE ratio by 4.6 points for the year ended December 31, 2009. Net favorable loss development for the years ended December 31, 2010 and 2009 was primarily attributable to a level of cumulative losses reported by our ceding companies that was lower than expected and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios. The net loss and LAE ratios were also affected by changes in the mix of business. The change in our estimate of the administrative costs of managing claims in the year ended December 31, 2010 decreased the net loss and LAE ratio by 3.5 points.

The following table sets forth the net favorable (unfavorable) development for the year ended December 31, 2010 by class of business (\$ in thousands):

Class of Business	Net			
	Net Losses and LAE	Acquisition Expense	Net Premiums	Net Development
North American claims made	\$54,054	\$2,714	\$-	\$ 56,768
North American occurrence excess-of-loss	35,377	(327)	72	35,122
North American clash	12,748	86	140	12,974
North American umbrella	9,205	212	-	9,417
Financial lines	11,488	(13)	(1)	11,474
International casualty	(14,768)	800	2,819	(11,149)
Accident and health	5,038	1,292	-	6,330
Other	139	-	-	139
Total	\$113,281	\$4,764	\$3,030	\$ 121,075

Net favorable development in the North American claims made class arose primarily from the 2003 through 2007 underwriting years. Net favorable development in the North American occurrence excess-of-loss class arose primarily from the 2002 through 2006 underwriting years. A review of historical results in the North American clash class

resulted in a change to the expected loss ratios in all prior underwriting years. This change in expected loss ratios contributed \$13.7 million to the net favorable development in this class. Net favorable development in the North American umbrella class arose primarily from the 2003, 2004 and 2006 underwriting years, partially offset by net unfavorable development in the 2008 underwriting year. Net favorable development in the financial lines class arose primarily from the North American surety business in the 2004 through 2008 underwriting years. The international casualty class was impacted by net unfavorable development from financial institutions business and utility companies' exposure to wildfires in Australia in the 2008 underwriting year. This was partially offset by net favorable development in all other underwriting years. This class also benefited by \$2.0 million of favorable development from changes in the pattern of expected reported losses and initial expected loss ratios. Net favorable development in the accident and health class arose primarily from the 2005 and 2008 underwriting years.

The following table sets forth the net favorable (unfavorable) development in the year ended December 31, 2009 by class of business (\$ in thousands):

Class of Business	Net Losses and LAE	Net Acquisition Expense	Net Premiums	Net Development
North American claims made	\$19,039	\$(705)	\$-	\$ 18,334
North American clash	1,882	46	368	2,296
North American occurrence excess-of-loss	15,613	(261)	84	15,436
North American umbrella	26,349	4,684	-	31,033
Accident and health	(4,714)	678	-	(4,036)
Financial lines	9,586	(157)	(577)	8,852
International casualty	6,238	(258)	192	6,172
Other	(404)	414	-	10
Total	\$73,589	\$4,441	\$67	\$ 78,097

Net favorable development in the North American claims made class arose primarily from the 2003 and 2005 underwriting years. This class also benefited by \$2.8 million of favorable development from changes in the pattern of expected reported losses and initial expected loss ratios. The net favorable development was partially offset by net unfavorable development in the 2007 underwriting year arising from claims related to the utilities sector. Net favorable development in the North American clash class related primarily to a specific loss resulting from an explosion in 2005. Net favorable development in the North American occurrence excess-of-loss class related primarily to the 2003, 2005 and 2007 underwriting years partially offset by net unfavorable development in the 2002 and 2008 underwriting years. The net favorable development in the 2003 and 2007 underwriting years resulted from improved loss experience in the current year after adverse experience led us to increase the selected loss ratio from the initial expected loss ratio in prior years. This class also benefited by \$1.2 million of favorable development from changes in the pattern of expected reported losses and initial expected loss ratios. Net favorable development in the North American umbrella class arose primarily from the 2003 through 2005 underwriting years and included \$0.6 million related to changes in the initial expected loss ratio for the 2008 underwriting year. The net unfavorable development in the accident and health class arose primarily from the 2007 and 2008 underwriting years and was partially offset by net favorable development in the 2004 and 2005 underwriting years. In the financial lines class, net favorable development related primarily from the 2004 through 2007 underwriting years partially offset by net unfavorable development in the 2008 underwriting year. Net favorable development in the international casualty class related primarily to the 2006 and prior underwriting years, partially offset by net unfavorable development in the 2007 and 2008 underwriting years.

Net acquisition expenses and related net acquisition expense ratios were \$71.5 million and 20.8% for the year ended December 31, 2010 and \$88.8 million and 22.8% for the year ended December 31, 2009. The decrease in net acquisition expenses in 2010 as compared with 2009 was primarily due to the decrease in net premiums earned. The decrease in the acquisition expense ratio was primarily due to changes in the mix of business. In addition, the decrease was partially due to a decrease in commissions related to prior years' losses of \$4.8 million, which, with related premium adjustments, represented 1.6% of net earned premiums in 2010 as compared with a decrease of \$4.4 million in commissions which, with related premium adjustments, represented 1.2% of net premiums earned in 2009.

Other underwriting expenses were \$23.1 million and \$25.6 million for the years ended December 31, 2010 and 2009, respectively. The decrease in 2010 as compared with 2009 was primarily due to a decrease in performance-based compensation in 2010.

Finite Risk

The Finite Risk segment generated 2.4% and 2.7% of our net premiums written for the years ended December 31, 2010 and 2009, respectively. Due to the inverse relationship between losses and commissions for this segment, we believe it is important to evaluate the overall combined ratio, rather than its component parts of net loss and LAE ratio and net acquisition expense ratio. The following table summarizes underwriting activity and ratios for the Finite Risk segment for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009	Increase (decrease)
Net premiums written	\$18,517	\$24,335	\$(5,818)
Net premiums earned	17,419	19,947	(2,528)
Net losses and LAE	4,232	1,185	
Net acquisition expenses	14,978	20,586	
Net losses, LAE and acquisition expenses	19,210	21,771	(2,561)

Other underwriting expenses	1,260		1,412	(152)
Finite Risk segment underwriting loss	\$(3,051)		\$(3,236)	\$185
Ratios:				
Net loss and LAE	24.3	%	5.9	%
Net acquisition expense	86.0	%	103.2	%
Net loss, LAE and acquisition expense ratios	110.3	%	109.1	% 1.2 points
Other underwriting expense	7.2	%	7.1	% 0.1 points
Combined	117.5	%	116.2	% 1.3 points

During the years ended December 31, 2010 and 2009, the Finite Risk portfolio consisted of one in force contract and we expect little or no new activity in this segment in the foreseeable future due to the relatively low level of demand for finite risk products. Due to the decline in the premium volume in recent years, current year ratios may be significantly impacted by minor adjustments of prior years' reserves. The decreases in net premiums written and net premiums earned in 2010 as compared with 2009 were attributable to a decrease in our share of the one contract.

Net losses, LAE and acquisition expenses decreased by \$2.6 million in the year ended December 31, 2010 as compared with the year ended December 31, 2009, primarily due to the decrease in net premiums earned. Net unfavorable development was \$2.5 million and \$2.3 million for the years ended December 31, 2010 and 2009, respectively. Net unfavorable development increased the net loss and LAE and acquisition expense ratio by 14.3 points and 11.3 points for the years ended December 31, 2010 and 2009, respectively.

Non-Underwriting Results

Net investment income was \$134.4 million and \$163.9 million for the years ended December 31, 2010 and 2009, respectively. Net investment income decreased in 2010 as compared with 2009 primarily as a result of lower new money yields on invested assets and cash and cash equivalents.

Net realized gains on investments were \$107.8 million and \$78.6 million for the years ended December 31, 2010 and 2009, respectively. The following table sets forth the components of our net realized gains and losses on investments for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009	Net change
Gross realized gains on the sale of investments	\$ 115,679	\$ 86,512	\$ 29,167
Gross realized losses on the sale of investments	(9,285)	(5,588)	(3,697)
Net gains on the sale of investments	106,394	80,924	25,470
Mark-to-market adjustments on fixed maturity trading securities	1,397	(2,294)	3,691
Net realized gains on investments	\$ 107,791	\$ 78,630	\$ 29,161

Sales of investments for the year ended December 31, 2010 resulted in net realized gains of \$106.4 million primarily from U.S. Government securities, U.S. Government agency residential mortgage-backed securities (“RMBS”) and non-U.S. Government securities. The net gains from mark-to-market adjustments on trading securities for the year ended December 31, 2010 included net gains of \$1.4 million primarily related to non-U.S. Government securities. Sales of investments for the year ended December 31, 2009 resulted in net realized gains of \$80.9 million primarily from U.S. Treasury Inflation-Protected Securities (“TIPS”), U.S. Government agency securities, corporate bonds and non-agency RMBS. The net losses from mark-to-market adjustments on trading securities in 2009 were comprised of \$2.1 million related to non-U.S. dollar denominated securities and \$1.2 million related to TIPS, which were partially offset by net gains of \$1.0 million related to insurance-linked securities.

The following table sets forth net impairment losses on investments for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009	Net change
Commercial mortgage-backed securities	\$(7,743)	\$(2,757)	\$(4,986)
Residential mortgage-backed securities	(11,178)	(8,358)	(2,820)
Asset-backed securities	(17,689)	(5,280)	(12,409)
Preferred stocks	–	(1,208)	1,208
Net impairment losses on investments	\$(36,610)	\$(17,603)	\$(19,007)

We routinely review our available-for-sale investments to determine whether unrealized losses represent temporary changes in fair value or are the result of an OTTI. During 2010 and 2009 we analyzed the projected cash flows of our non-agency structured securities at an individual security level. If the projected cash flows are less than the amortized cost, a credit loss has generally occurred. The amount of the credit loss of an impaired debt security is the difference between the amortized cost and the greater of (i) the present value of expected future cash flows and (ii) the fair value of the security. The credit loss is recognized in net income and the portion of OTTI related to all other factors is recognized in accumulated other comprehensive income or loss. We evaluate the unrealized losses of our preferred stocks by individual issuer and determine if we can forecast a reasonable period of time by which the fair value of the securities would increase and we would recover our cost. If we were unable to forecast a reasonable period of time in which to recover the cost of our preferred stocks, we recorded a net impairment loss in our consolidated statement of operations equivalent to the entire unrealized loss.

Other Expenses

The net changes in the fair value of derivatives were \$9.6 million and \$9.7 million for the years ended December 31, 2010 and 2009, respectively. The net changes in the fair value of derivatives were attributed to a three year derivative

contract with Topiary Capital Limited (“Topiary”) that commenced in August 2008 and provides us with annual second event catastrophe protection. See “Financial Condition – Liquidity” for additional discussion of Topiary.

Operating expenses were \$82.6 million and \$94.7 million for the years ended December 31, 2010 and 2009, respectively. Operating expenses include \$57.0 million and \$64.4 million relating to other underwriting expenses for the years ended December 31, 2010 and 2009, respectively. The remaining \$25.6 million and \$30.3 million in 2010 and 2009, respectively, related to costs such as compensation and other corporate expenses associated with operating as a publicly-traded company. The decrease in operating expenses was primarily attributable to a decrease in performance-based compensation expense in 2010 as compared with 2009.

Interest expense was \$19.0 million for each of the years ended December 31, 2010 and 2009 and related to our \$250.0 million of Series B 7.5% Notes due June 1, 2017 (the "Series B Notes").

Income tax expense was \$43.2 million and \$4.3 million for the years ended December 31, 2010 and 2009, respectively. The effective tax rates were 16.7% and 1.1% for the years ended December 31, 2010 and 2009, respectively. The effective tax rate in any given period is primarily driven by the composition of income before income tax expense from our subsidiaries. The increase in income tax expense and effective tax rate for the year ended December 31, 2010 as compared with the same period in 2009 was primarily due to the increase in the proportion of income before income taxes generated by our U.S.-based subsidiaries. The percentage of income before income taxes derived from our U.S.-based subsidiaries was 50% for the year ended December 31, 2010 as compared with 4% for the year ended December 31, 2009.

Year Ended December 31, 2009 as Compared with the Year Ended December 31, 2008

Net income and diluted earnings per common share for the years ended December 31, 2009 and 2008 were as follows (\$ and amounts in thousands, except earnings per share):

	2009	2008	Net change
Underwriting income	\$218,188	\$90,104	\$128,084
Net investment income	163,941	186,574	(22,633)
Net realized gains on investments	78,630	57,254	21,376
Net impairment losses on investments	(17,603)	(30,686)	13,083
Other revenues (expenses)	(55,580)	(64,007)	8,427
Income before income taxes	387,576	239,239	148,337
Income tax expense	(4,285)	(12,999)	8,714
Net income	383,291	226,240	157,051
Preferred dividends	(1,301)	(10,408)	9,107
Net income attributable to common shareholders	\$381,990	\$215,832	\$166,158
Weighted average shares outstanding for diluted earnings per common share	52,315	56,855	(4,540)
Diluted earnings per common share	\$7.33	\$3.98	\$3.35

The increase in net income for the year ended December 31, 2009 as compared with 2008 was primarily due to an increase in net underwriting income as a result of a decrease in net losses arising from major catastrophes in 2009 as compared with 2008. The increase in diluted earnings per common share for the year ended December 31, 2009 as compared with 2008 was primarily due to the increase in net income. Diluted earnings per common share was also favorably impacted by a decrease in weighted average shares outstanding used to calculate diluted earnings per common share, primarily due to the repurchase of 7,852,498 of our common shares in 2009.

Underwriting Results

Net underwriting income was \$218.2 million and \$90.1 million for the years ended December 31, 2009 and 2008, respectively. The increase was primarily due to a decrease in net underwriting losses arising from major catastrophes, partially offset by a decrease in net favorable development.

Net losses arising from major catastrophes were \$35.5 million and \$198.0 million for the years ended December 31, 2009 and 2008, respectively. Net favorable development was \$101.0 million and \$147.6 million in the years ended December 31, 2009 and 2008, respectively. The net favorable development for the year ended December 31, 2009 relating to prior years emerged primarily from the Property and Marine and Casualty segments. Additionally, net underwriting income was favorably impacted in 2009 by improved loss experience relating to a reinsurance contract in the Casualty segment covering leased private passenger automobile residual values (the "RVI Contract").

Property and Marine

The Property and Marine operating segment generated 57.6% and 57.1% of our net premiums written in 2009 and 2008, respectively. The following table summarizes underwriting activity and ratios for the Property and Marine segment for the years ended December 31, 2009 and 2008 (\$ in thousands):

	2009	2008	Increase (decrease)
--	------	------	---------------------

Gross premiums written	\$ 543,851	\$ 622,171	\$(78,320)
Ceded premiums written	26,840	29,084	(2,244)
Net premiums written	517,011	593,087	(76,076)
Net premiums earned	528,488	599,110	(70,622)
Net losses and LAE	250,646	397,200	(146,554)
Net acquisition expenses	66,992	90,816	(23,824)
Other underwriting expenses	37,331	38,492	(1,161)
Property and Marine segment underwriting income	\$ 173,519	\$ 72,602	\$ 100,917

Ratios:

				(18.9)
Net loss and LAE	47.4	%	66.3	% points
Net acquisition expense	12.7	%	15.2	% (2.5) points
Other underwriting expense	7.1	%	6.4	% 0.7 points
				(20.7)
Combined	67.2	%	87.9	% points

Property and Marine segment underwriting income increased by \$100.9 million for the year ended December 31, 2009 as compared with the year ended December 31, 2008, primarily due to a decrease in net losses arising from major catastrophes, partially offset by a decrease in net favorable development and net premiums earned. Net losses arising from major catastrophes, net of reinstatement premiums and commissions, were \$35.5 million and \$198.0 million for the years ended December 31, 2009 and 2008, respectively. Net losses arising from major catastrophes for the year ended December 31, 2009 were primarily attributable to the Irish Floods, Hailstorm Wolfgang and Winterstorm Klaus. Net losses arising from major catastrophes for the year ended December 31, 2008 were primarily attributable to Hurricanes Gustav and Ike and Winterstorm Emma. Net favorable development was \$25.1 million and \$77.6 million for the years ended December 31, 2009 and 2008, respectively.

Gross premiums written decreased by \$78.3 million for the year ended December 31, 2009 as compared with the year ended December 31, 2008. Gross premiums written included reinstatement premiums of \$7.2 million and \$28.3 million related to major catastrophes for the years ended December 31, 2009 and 2008, respectively. The decrease in gross premiums written was primarily due to reduced exposure to catastrophe events, most significantly in the renewal of contracts effective January 1, 2009 for the year ended December 31, 2009 as compared with the same period in 2008. Net premiums earned decreased by \$70.6 million as a result of reduced net premiums written in the current and prior underwriting years and changes in the mix of business.

Net losses and LAE decreased by \$146.6 million in the year ended December 31, 2009 as compared with the year ended December 31, 2008, primarily due to the decrease in losses arising from major catastrophes in 2009. Net losses and LAE arising from major catastrophes were \$42.6 million and \$224.9 million for the years ended December 31, 2009 and 2008, respectively. The decrease in losses from major catastrophes was partially offset by the decrease in net favorable loss development. Net favorable loss development was \$14.3 million and \$71.2 million in 2009 and 2008, respectively. Net losses arising from major catastrophes, with related premium adjustments, increased the net loss and LAE ratio by 7.5 points and 36.1 points for the years ended December 31, 2009 and 2008, respectively. Net favorable loss development and related premium adjustments decreased the net loss and LAE ratio by 3.2 and 13.4 points in 2009 and 2008, respectively. Net favorable loss development in both 2009 and 2008 was primarily attributable to a level of cumulative losses reported by our ceding companies that was lower than we expected and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios. The net loss and LAE ratios were also affected by changes in the mix of business.

Net favorable development was \$25.1 million for the year ended December 31, 2009. See “Results of Operations – Year Ended December 31, 2010 as Compared with the Year Ended December 31, 2009 – Underwriting Results – Property and Marine” above for discussion of net favorable development by class of business for the year ended December 31, 2009.

The following table sets forth the net favorable (unfavorable) development for the year ended December 31, 2008 by class of business (\$ in thousands):

Class of Business	Net Losses and LAE	Net		
		Acquisition Expense	Net Premiums	Net Development
Property per-risk excess-of-loss	\$8,065	\$579	\$3,539	\$12,183
Catastrophe excess-of-loss (non-major events)	24,005	(1,365)	1,697	24,337
Major catastrophes	18,833	–	(951)	17,882
Crop	11,603	(2,734)	–	8,869
Marine, aviation and satellite	686	(1,541)	7,195	6,340
Property proportional	8,028	(18)	–	8,010
Total	\$71,220	\$(5,079)	\$11,480	\$77,621

Net favorable development in the property per-risk excess-of-loss class related primarily to the 2006 and 2007 underwriting years. The net favorable development included improved experience in business with smaller regional cedants where loss ratios had been increased from initial expected loss ratios in prior years. A change in the loss development patterns in our North American business resulted in \$1.9 million of the net favorable development. Net favorable development in the catastrophe excess-of-loss (non-major events) class related primarily to the 2007 underwriting year. Following a study of our historical experience and an updated exposure analysis, we decreased our initial expected loss ratio of our non-U.S. catastrophe excess-of-loss (non-major events) class resulting in \$0.6 million of the net favorable development. Net favorable development in major catastrophes related primarily to events occurring in 2005 and 2007, with the most significant net favorable development related to Hurricanes Ivan and Katrina, Winterstorm Kyrill and the 2007 summer floods in the UK. Net favorable development in the crop class related primarily to the 2007 underwriting year. Net favorable development in the marine, aviation and satellite class related primarily to an increase in reinstatement premiums resulting from adverse loss experience of several years. The net favorable development was partially offset by net unfavorable development in the 2006 and 2007 underwriting years of \$0.8 million related to changes in the loss development pattern and initial expected loss ratio assumptions. Net favorable development in the property proportional class related primarily to the 2002 through 2007 underwriting years, with a change in the loss development patterns resulting in approximately \$1.8 million of net favorable development.

Net acquisition expenses and related net acquisition expense ratios were \$67.0 million and 12.7% for the year ended December 31, 2009 and \$90.8 million and 15.2% for the year ended December 31, 2008. The decrease in net acquisition expenses in 2009 as compared with 2008 was primarily due to a decrease in net premiums earned. The decrease in the acquisition expense ratio was due to a decrease in commissions related to prior years' losses of \$6.1 million, which, with related premium adjustments, represented 1.3% of net earned premiums in 2009 as compared with an increase in commissions related to prior years' losses of \$5.1 million in 2008 which, with related premium adjustments, represented 0.6% of net premiums earned. Net acquisition expense ratios were also impacted by changes in the mix of business.

Other underwriting expenses were \$37.3 million and \$38.5 million for the years ended December 31, 2009 and 2008, respectively. The decrease in 2009 as compared with 2008 was due to \$4.3 million of one-time fees and expenses incurred in 2008 when we entered into the derivative contract with Topiary, partially offset by an increase in performance-based compensation in 2009.

Casualty

The Casualty operating segment generated 39.7% and 41.5% of our net premiums written for the years ended December 31, 2009 and 2008, respectively. The following table summarizes underwriting activity and ratios for the Casualty segment for the years ended December 31, 2009 and 2008 (\$ in thousands):

	2009	2008	Increase (decrease)
Net premiums written	\$356,488	\$430,084	\$(73,596)
Net premiums earned	388,901	503,300	(114,399)
Net losses and LAE	226,511	337,051	(110,540)
Net acquisition expenses	88,841	125,934	(37,093)
Other underwriting expenses	25,644	23,982	1,662
Casualty segment underwriting income	\$47,905	\$16,333	\$31,572
Ratios:			
Net loss and LAE	58.2	% 67.0	% (8.8) points
Net acquisition expense	22.8	% 25.0	% (2.2) points
Other underwriting expense	6.6	% 4.8	% 1.8 points
Combined	87.6	% 96.8	% (9.2) points

Casualty segment underwriting income increased by \$31.6 million in the year ended December 31, 2009 as compared with the year ended December 31, 2008, which was primarily the result of improved loss experience relating to the RVI Contract. For the year ended December 31, 2008, we recorded net underwriting losses on the RVI Contract of \$28.1 million, which exhausted the aggregate loss limit on the contract, and for the year ended December 31, 2009, we decreased net underwriting losses related to the RVI Contract by \$12.6 million as a result of improved loss experience. Partially offsetting the difference in net underwriting losses related to the RVI Contract in 2009 as compared with 2008 were net underwriting losses of \$9.2 million related to an accident and health contract and incurred losses of \$8.9 million from an international casualty contract related to liability arising from Australian wildfires for the year ended December 31, 2009.

Net premiums written decreased by \$73.6 million in the year ended December 31, 2009 as compared with the year ended December 31, 2008. The decrease was primarily due to decreases in business underwritten in 2008 and 2009 across most casualty classes and was the result of fewer opportunities that met our underwriting standards. The decrease in net premiums earned was the result of the decrease in net premiums written in current and prior years. Net premiums written and earned were also affected by changes in the mix of business and the structure of the underlying reinsurance contracts.

Net losses and LAE decreased by \$110.5 million in the year ended December 31, 2009 as compared with the year ended December 31, 2008, which was primarily due to a decrease in net premiums earned and the effects of the contracts discussed above. Net favorable loss development was \$73.6 million and \$73.2 million in 2009 and 2008, respectively. Net favorable loss development and related premium adjustments decreased the net loss and LAE ratios by 19.0 points and 14.7 points in the years ended December 31, 2009 and 2008, respectively. Net favorable loss development was primarily attributable to a level of cumulative losses reported by our ceding companies that was lower than expected and that, in our judgment, resulted in sufficient credibility in the loss experience to change our previously selected loss ratios. The net loss and LAE ratios were also affected by changes in the mix of business.

Edgar Filing: PLATINUM UNDERWRITERS HOLDINGS LTD - Form 10-K

Net favorable development was \$78.1 million for the year ended December 31, 2009. See “Results of Operations – Year Ended December 31, 2010 as Compared with the Year Ended December 31, 2009 – Underwriting Results – Casualty” above for discussion of net favorable development by class of business for the year ended December 31, 2009.

The following table sets forth the net favorable (unfavorable) development in the year ended December 31, 2008 by class of business (\$ in thousands):

Class of Business	Net Losses and LAE	Net Acquisition Expense	Net Premiums	Net Development
North American claims made excess-of-loss	\$47,014	\$ (5,505)	\$–	\$ 41,509
North American umbrella	7,290	(20)	–	7,270
Financial lines	10,734	230	572	11,536
International casualty	8,521	487	126	9,134
Other	(317)	38	419	140
Total	\$73,242	\$ (4,770)	\$1,117	\$ 69,589

- 44 -

Net favorable development in the North American claims made excess-of-loss class related primarily to the 2003 through 2006 underwriting years. During the year an analysis of our medical malpractice business resulted in changes to the loss development pattern and initial expected loss ratios for the 2004 and later underwriting years which resulted in \$9.2 million of the net favorable development. The 2007 underwriting year experienced net unfavorable development due to exposure to claims relating to the financial crisis. Net favorable development in the North American umbrella class related primarily to the 2004 and 2005 underwriting years. Net favorable development in the financial lines class related primarily to the 2004 through 2007 underwriting years' credit and surety excess-of-loss classes. Net favorable development in the international casualty class related primarily to the 2002 through 2004 underwriting years' motor excess-of-loss and claims made classes, partially offset by net unfavorable development in the 2006 underwriting year.

Net acquisition expenses and related net acquisition expense ratios were \$88.8 million and 22.8% for the year ended December 31, 2009 and \$125.9 million and 25.0%, for the year ended December 31, 2008. The decrease in net acquisition expenses in 2009 as compared with 2008 was primarily due to the decrease in net premiums earned. The decrease in the acquisition expense ratio was due to a decrease in commissions related to prior years' losses of \$4.4 million, which, with related premium adjustments, represented 1.2% of net earned premiums in 2009 as compared with an increase of \$4.8 million in commissions which, with related premium adjustments, represented 0.3% of net premiums earned in 2008. Net acquisition expense ratios were also impacted by changes in the mix of business.

Other underwriting expenses were \$25.6 million and \$24.0 million for the years ended December 31, 2009 and 2008, respectively. The increase in other underwriting expenses in 2009 as compared with 2008 was primarily due to an increase in performance-based compensation in 2009.

Finite Risk

The Finite Risk segment generated 2.7% and 1.4% of our net premiums written for the years ended December 31, 2009 and 2008, respectively. The following table summarizes underwriting activity and ratios for the Finite Risk segment for the years ended December 31, 2009 and 2008 (\$ in thousands):

	2009	2008	Increase (decrease)
Net premiums written	\$24,335	\$14,394	\$9,941
Net premiums earned	19,947	12,386	7,561
Net losses and LAE	1,185	(16,018)	
Net acquisition expenses	20,586	25,965	
Net losses, LAE and acquisition expenses	21,771	9,947	11,824
Other underwriting expenses	1,412	1,270	142
Finite Risk segment underwriting income (loss)	\$(3,236)	\$1,169	\$(4,405)
Ratios:			
Net loss and LAE	5.9	% (129.3	%)
Net acquisition expense	103.2	% 209.6	%
Net loss, LAE and acquisition expense ratios	109.1	% 80.3	% 28.8 points
Other underwriting expense	7.1	% 10.3	% (3.2) points
Combined	116.2	% 90.6	% 25.6 points

During the years ended December 31, 2009 and 2008, the Finite Risk portfolio consisted of one in force contract. Due to the decline in the premium volume in recent years, current year ratios may be significantly impacted by minor adjustments of prior years' reserves. The increases in net premiums written and net premiums earned in 2009 as compared with 2008 were attributable to an increase in our share of one contract.

Net losses, LAE and acquisition expenses increased by \$11.8 million in the year ended December 31, 2009 as compared with the year ended December 31, 2008, primarily due to the increase in net premiums earned and the difference in net favorable development in 2009 as compared with 2008. Net unfavorable development was \$2.3 million in 2009 as compared with net favorable development of \$0.4 million in 2008. Net unfavorable development in 2009 resulted from commission adjustments that were affected by interest income on funds held by the ceding companies in the year. Interest income on funds held that affected commissions was \$2.2 million and \$1.5 million in 2009 and 2008, respectively. The net unfavorable development increased the net loss and LAE and acquisition expense ratio by 11.3 points in 2009 and the net favorable development decreased the net loss and LAE and acquisition expense ratio by 3.4 points in 2008. The net loss, LAE and acquisition expense ratio was also favorably impacted as a result of premiums recognized for which there were no related losses for the year ended December 31, 2008.

Non-Underwriting Results

Net investment income was \$163.9 million and \$186.6 million for the years ended December 31, 2009 and 2008, respectively. Net investment income decreased in 2009 as compared with 2008 primarily due to a decrease in yields on invested assets and cash and cash equivalents. Net investment income decreased by \$4.2 million and \$1.3 million in 2009 and 2008, respectively, for adjustments related to TIPS, reflecting changes in the consumer price index.

Net realized gains on investments were \$78.6 million and \$57.3 million for the years ended December 31, 2009 and 2008, respectively. The following table sets forth the components of our net realized gains and losses on investments for the years ended December 31, 2009 and 2008 (\$ in thousands):

	2009	2008	Net change
Gross realized gains on the sale of investments	\$86,512	\$53,178	\$33,334
Gross realized losses on the sale of investments	(5,588)	(5,605)	17
Net gains on the sale of investments	80,924	47,573	33,351
Mark-to-market adjustments on fixed maturity trading securities	(2,294)	9,681	(11,975)
Net realized gains on investments	\$78,630	\$57,254	\$21,376

Sales of investments for the year ended December 31, 2009 resulted in net realized gains of \$80.9 million primarily from TIPS, U.S. Government agency securities, corporate bonds and U.S. Government agency RMBS. The U.S. Government agency securities that we sold consisted of securities issued by financial institutions under the Temporary Liquidity Guarantee Program and that are guaranteed by the Federal Deposit Insurance Corporation. The net losses from mark-to-market adjustments on trading securities in 2009 were comprised of net losses of \$2.1 million related to non-U.S. dollar denominated securities and \$1.2 million related to TIPS, which were partially offset by net gains of \$1.0 million related to insurance-linked securities. Sales of investments for the year ended December 31, 2008 resulted in net realized gains of \$51.8 million primarily from TIPS, U.S. Government securities, U.S. Government agencies, and U.S. Government agency RMBS and net realized losses of \$4.2 million from corporate bonds. The net gains from mark-to-market adjustments on trading securities in 2008 were comprised of \$8.4 million related to non-U.S. dollar denominated securities and \$1.3 million of changes in the fair value of TIPS.

The following table sets forth net impairment losses on investments for the years ended December 31, 2009 and 2008 (\$ in thousands):

	2009	2008	Net change
Commercial mortgage-backed securities	\$(2,757)	\$-	\$(2,757)
Residential mortgage-backed securities	(8,358)	(15,787)	7,429
Asset-backed securities	(5,280)	(1,616)	(3,664)
Preferred stocks	(1,208)	(5,647)	4,439
Corporate bonds	-	(7,636)	7,636
Net impairment losses on investments	\$(17,603)	\$(30,686)	\$13,083

The net impairment losses on investments recorded for the year ended December 31, 2008 reflect the entire difference between the amortized cost basis and the fair value of the impaired securities at the balance sheet date.

Other Expenses

The net changes in the fair value of derivatives were \$9.7 million and \$14.1 million for the years ended December 31, 2009 and 2008, respectively. The decrease in expense in the year ended December 31, 2009 as compared with 2008 was due to the expiration of three derivative contracts that were in effect in the year ended December 31, 2008. In 2008, in addition to the derivative contract with Topiary, we had an additional contract that provided second event catastrophe protection along with two derivative contracts that were options to purchase industry loss warranty retrocessional protection.

Operating expenses were \$94.7 million and \$88.2 million for the years ended December 31, 2009 and 2008, respectively. Operating expenses include \$64.4 million and \$63.7 million relating to other underwriting expenses for the years ended December 31, 2009 and 2008, respectively. The remaining \$30.3 million and \$24.5 million in 2009 and 2008, respectively, related to costs such as compensation and other corporate expenses associated with operating as a publicly-traded company. The increase in operating expenses was primarily attributable to an increase in performance-based compensation accruals in 2009, partially offset by a decrease of \$4.3 million in expenses related to entering into the agreement with Topiary in 2008.

Net foreign currency exchange gains for the year ended December 31, 2009 were \$0.4 million compared with net foreign currency exchange losses of \$6.8 million for the year ended December 31, 2008. We routinely transact business in currencies other than the U.S. dollar. The net foreign currency exchange losses in 2008 were the result of holding more non-U.S. dollar denominated assets than non-U.S. dollar denominated liabilities, primarily the Euro and the British pound sterling, as the U.S. dollar strengthened against those currencies. In 2009 we held non-U.S. dollar denominated assets and liabilities in approximately equivalent amounts.

Interest expense was \$19.0 million for each of the years ended December 31, 2009 and 2008 and was related to our \$250.0 million of the Series B Notes.

Income tax expense was \$4.3 million and \$13.0 million for the years ended December 31, 2009 and 2008, respectively. The effective tax rates were 1.1% and 5.4% for the years ended December 31, 2009 and 2008, respectively. The decrease in income tax expense and effective tax rate for the year ended December 31, 2009 was primarily due to the decrease in the proportion of income before income taxes generated by our U.S.-based subsidiaries. The decrease in taxable income was partially attributable to an increase in the proportion of assets in Platinum US that was invested in tax-advantaged municipal bonds. The effective tax rate in any given period is primarily driven by the composition of income before income tax expense from our subsidiaries. The decrease in the effective tax rate in 2009 as compared with 2008 was the result of a greater portion of income before income tax expense being generated by Platinum Holdings and Platinum Bermuda, which are not subject to corporate income tax. In 2009, the percentage of income before income tax expense derived from Platinum Holdings and Platinum Bermuda was 94.3% as compared with 84.4% in 2008.

Financial Condition

Liquidity

Liquidity Requirements

Our principal cash requirements are the payment of losses and LAE, commissions, brokerage, operating expenses and income taxes. Additionally, cash is required for dividends to our common shareholders, the servicing of debt, share repurchases and the purchase of retrocessional contracts. We expect that our liquidity needs for the next twelve months will be met by our cash and cash equivalents, short-term investments, cash flows from operations, investment income and proceeds from the sale, redemption or maturity of our investments.

Platinum Holdings is a holding company, the assets of which consist primarily of shares of its subsidiaries. Platinum Holdings depends primarily on its available cash resources and liquid investments, and dividends, interest and other distributions from its subsidiaries, to meet its obligations. Such obligations may include operating expenses, debt service obligations, dividends on its common shares and repurchases of common shares or other securities. Applicable laws and statutory requirements of the jurisdictions in which our regulated reinsurance subsidiaries operate, Bermuda and the United States, limit the payment of dividends and other distributions from these subsidiaries. The ability of the reinsurance subsidiaries to pay dividends is also constrained by our dependence on the financial strength ratings by A.M. Best and S&P of our reinsurance subsidiaries, which depend to a large extent on the capitalization levels of the reinsurance subsidiaries. We believe that Platinum Holdings has sufficient cash resources and its subsidiaries have available dividend capacity to service our current outstanding obligations. Platinum Holdings received dividends from its subsidiaries of \$396.5 million during the year ended December 31, 2010. Based on the regulatory restrictions, the maximum amount available for payment of dividends or other distributions by the reinsurance subsidiaries of Platinum Holdings without prior regulatory approval in 2011 is estimated to be \$406.1 million. Subsequent to December 31, 2010, Platinum Bermuda made dividend payments of \$180.0 million to Platinum Holdings.

Platinum Holdings has unconditionally guaranteed the outstanding \$250.0 million aggregate principal amount of the Series B Notes due June 1, 2017, issued by Platinum Finance. Platinum Finance pays interest at a rate of 7.5% per annum on the Series B Notes on each June 1 and December 1. In addition to our financial strength ratings, A.M. Best has assigned an issuer credit rating of “bbb” to the debt obligations of Platinum Holdings and Platinum Finance. S&P has assigned counterparty credit ratings of “BBB+” to Platinum Holdings and “A” to Platinum Bermuda and Platinum US, and an issuer credit rating of “BBB+” to the debt obligations of Platinum Finance.

During 2010, Platinum Finance provided loans to Platinum Holdings of \$75.0 million, due February 1, 2011, with interest payable at maturity at a rate of 80 basis points per annum. These loans were fully repaid on February 1, 2011.

Platinum Bermuda is not licensed, approved or accredited as a reinsurer in the United States and, therefore, under the terms of most of its contracts with U.S. ceding companies, it is required to provide collateral to its ceding companies for unpaid ceded liabilities in a form acceptable to state insurance commissioners. Typically, this type of collateral takes the form of letters of credit issued by a bank, the establishment of a trust, or funds withheld.

Platinum Bermuda and Platinum US have reinsurance and other contracts that also require them to provide collateral to ceding companies should certain events occur, such as a decline in our financial strength rating by A.M. Best or S&P below specified levels or a decline in statutory equity below specified amounts, or when certain levels of assumed liabilities are attained. Some reinsurance contracts also have special termination provisions that permit early termination should certain events occur. As of December 31, 2010 and 2009, we held investments with a carrying value of \$69.8 million and \$275.5 million, respectively, and cash and cash equivalents of \$9.9 million and \$26.8

million, respectively, in trust to collateralize obligations under various reinsurance contracts. As of December 31, 2010 and 2009, we held investments with a carrying value of \$48.6 million and \$206.5 million, respectively, and cash and cash equivalents of \$100.3 million and \$17.0 million, respectively, to collateralize letters of credit issued under our credit facility. The letters of credit were issued to collateralize obligations under various reinsurance contracts. See “Financial Condition – Liquidity – Sources of Liquidity” below for additional discussion on our credit facility.

In August 2008, we entered into a derivative agreement with Topiary that provides us with the ability to recover up to \$200.0 million should two catastrophic events involving U.S. wind, U.S. earthquake, European wind or Japanese earthquake occur that meet specified loss criteria during any of three annual periods commencing August 1, 2008. Both the initial activation event and the qualifying second event must occur in the same annual period. The maximum amount that we can recover over the three-year period is \$200.0 million. Any recovery we make under this contract is based on insured property industry loss estimates for the U.S. perils and European wind and a parametric index for Japanese earthquake events. Recovery is based on both a physical and financial variable and is not based on actual losses we may incur. Consequently, the transaction is accounted for as a derivative and is carried at the estimated fair value.

Under the terms of the agreement, we pay Topiary approximately \$9.7 million during each of the three annual periods. The net derivative liability of \$4.9 million was included in other liabilities on our consolidated balance sheet as at December 31, 2010. The net change in fair value of \$9.6 million, \$9.7 million and \$7.1 million was included in the net changes in fair value of derivatives in our consolidated statements of operations for the years ended December 31, 2010, 2009 and 2008, respectively. One-time fees and expenses of \$4.3 million related to entering into the agreement with Topiary were included in operating expenses for the year ended December 31, 2008.

Topiary’s limit of loss is collateralized with high quality investment grade securities deposited in an account to secure obligations to the Company. The performance of the securities in the collateral account is guaranteed under a total return swap agreement with Goldman Sachs International whose obligations under the swap agreement are guaranteed by Goldman Sachs Group, Inc.

Sources of Liquidity

Our sources of funds consist primarily of cash from operations, proceeds from sales, redemption and maturity of investments, issuance of securities and cash and cash equivalents held by us. Net cash flows provided by operations excluding trading securities were \$68.3 million and \$269.0 million for the years ended December 31, 2010 and 2009, respectively. In addition, we have a \$400.0 million credit facility with a syndicate of lenders that consists of a \$150.0 million senior unsecured credit facility available for revolving borrowings and letters of credit and a \$250.0 million senior secured credit facility available for letters of credit. As of December 31, 2010, under the credit facility \$150.0 million was available for borrowing and letters of credit on an unsecured basis and \$116.3 million was available for letters of credit on a secured basis. As of December 31, 2009, under the credit facility \$150.0 million was available for borrowing and letters of credit on an unsecured basis and \$105.9 million was available for letters of credit on a secured basis. The credit facility requires us to satisfy various covenants, including several financial covenants. As of December 31, 2010, we were in compliance with all covenants under the credit facility. The credit facility expires on September 13, 2011. While we intend to enter into a new credit facility in 2011, we do not know what the terms of the new facility will be or if the terms will be the same as or similar to the current terms.

On a consolidated basis, our aggregate cash and invested assets totaled \$4.2 billion and \$4.4 billion at December 31, 2010 and 2009, respectively. Additionally, there were net balances due from brokers related to the sale of securities of \$0.1 million and \$123.3 million at December 31, 2010 and December 31, 2009, respectively. Balances due from and to brokers are included in other assets and other liabilities, respectively. Our investment portfolio consists primarily of diversified, high quality, predominantly investment grade fixed maturity securities. Our aggregate cash and invested assets, including accrued investment income and net balances due to and from brokers, had a duration of 4.1 years and 3.5 years as of December 31, 2010 and 2009, respectively.

As part of our investment strategy, we seek to establish a level of cash and liquid short-term and intermediate-term securities which, combined with expected cash flows from our subsidiaries, we believe to be adequate to meet our foreseeable payment obligations. Our reinsurance subsidiaries have liquidity from premiums, which are generally received in advance of the time losses are paid. The period of time from the occurrence of a claim through the settlement of the liability may extend many years into the future. However, due to the nature of our reinsurance operations, cash flows are affected by claim payments that can fluctuate from year to year. The amount and timing of actual claim payments can vary based on many factors, including the severity of individual losses, changes in the legal environment, and general market conditions. The ultimate amount and timing of the claim payments could differ materially from our estimates and create significant variations in cash flows from operations between periods, which may require us to make payments from other sources of liquidity, such as sales of investments, borrowings from credit facilities or proceeds from capital market transactions. If we need to sell investments to meet liquidity requirements, the sale of such investments may be at a material loss.

As of December 31, 2010, the fair value of our available-for-sale securities was \$2.9 billion, with a net unrealized loss of \$23.7 million, and the fair value of our trading securities was \$182.1 million. The following table sets forth the fair values, with net unrealized gains and losses and average credit quality of our fixed maturity securities as of December 31, 2010 (\$ in thousands):

	Fair Value	Net Unrealized Gain (Loss)	Average Credit Quality
Available-for-sale securities:			
U.S. Government	\$ 391,303	\$ (17,540)	Aaa
U.S. Government agencies	100,547	547	Aaa

- 48 -

The net unrealized gain position of our CMBS portfolio was \$8.3 million as of December 31, 2010 as compared with a net unrealized loss position of \$28.2 million as of December 31, 2009. This improvement in the net unrealized position was primarily attributable to a decrease in yields. We analyze our CMBS on a periodic basis using default loss models based on the performance of the underlying loans. Performance metrics include delinquencies, defaults, foreclosures, debt-service-coverage ratios and cumulative losses incurred. The expected losses for a mortgage pool are compared to the current level of credit support, which generally represents the point at which our security would experience losses. We evaluate projected cash flows as well as other factors in order to determine if a credit impairment has occurred. Our portfolio consists primarily of senior tranches of CMBS with high credit ratings and strong credit support.

The net unrealized loss position of our RMBS portfolio was \$25.9 million, of which \$25.6 million related to non-agency RMBS, as of December 31, 2010 as compared with \$52.6 million, of which \$45.0 million related to non-agency RMBS, as of December 31, 2009. This improvement in the net unrealized loss position was attributable to a decrease in yields and the recognition of credit impairments during 2010. Approximately 49% of the RMBS in our investment portfolio are issued or guaranteed by the Government National Mortgage Association, the Federal National Mortgage Association, Federal Home Loan Mortgage Corporation or the Federal Deposit Insurance Corporation and are referred to as U.S. Government agency RMBS. The remaining 51% of our RMBS were issued by non-agency institutions and included securities with underlying Alt-A mortgages. The net unrealized loss position of our portfolio of sub-prime asset-backed securities (“ABS”) was \$4.4 million as of December 31, 2010 as compared with \$25.7 million as of December 31, 2009. This improvement in the net unrealized loss position was primarily attributable to the recognition of credit impairments during 2010. We analyze our non-agency RMBS and sub-prime ABS on a periodic basis using default loss models based on the performance of the underlying loans. Performance metrics include, but are not limited to, delinquencies, defaults, foreclosures, prepayment speeds and cumulative losses incurred. The expected losses for a mortgage pool are compared to the current level of credit support, which generally represents the point at which our security would experience losses. We evaluate projected cash flows as well as other factors in order to determine if a credit impairment has occurred.

We believe that the gross unrealized losses in our available-for-sale portfolio represent temporary declines in fair value. We believe that the unrealized losses are not necessarily predictive of ultimate performance and that the provisions we have made for net impairment losses are adequate. However, economic conditions may deteriorate more than expected and may adversely affect the expected cash flows of our securities, which in turn may lead to impairment losses recorded in future periods. Conversely, economic conditions may improve more than expected and favorably increase the cash flows expected from these securities, which would be earned through net investment income over the remaining life of the security.

Fair Values

In addition to our fixed maturity securities and short-term investments, our financial assets and liabilities include our debt obligations (the Series B Notes discussed above) as well as our derivative instruments. All financial assets and liabilities are recorded at fair value in the consolidated balance sheets, except for our debt obligations which are recorded at cost.

At December 31, 2010, we had one derivative instrument, which is included in other liabilities in the consolidated balance sheets, that is fair valued primarily using unobservable inputs through the application of our own assumptions and internal valuation pricing model. The fair value of our debt obligations is based on prices we obtained from independent sources for those or similar securities using quoted prices in active markets and standard market valuation pricing models. See Note 3 to the “Notes to Consolidated Financial Statements” contained elsewhere in this Form 10-K for additional discussion on fair values.

The following table presents the carrying amounts and estimated fair values of our financial instruments as of December 31, 2010 (\$ in thousands):

	Carrying Amount	Fair Value
Financial assets:		
Fixed maturity securities	\$3,047,973	\$ 3,047,973
Short-term investments	\$176,648	\$ 176,648
Financial liabilities:		
Debt obligations	\$250,000	\$ 260,882
Derivative instrument	\$4,871	\$ 4,871

Capital Resources

At December 31, 2010, our capital resources of \$2.1 billion consisted of common shareholders' equity of \$1.9 billion and \$250.0 million of the Series B Notes. At December 31, 2009, our capital resources of \$2.3 billion consisted of common shareholders' equity of \$2.1 billion, and \$250.0 million of the Series B Notes. The decrease in capital during year ended December 31, 2010 was primarily attributable to share repurchase activity and the purchase of options, offset by net income and an improvement in accumulated other comprehensive loss.

We monitor our capital adequacy on a regular basis and seek to adjust our capital according to the needs of our business. In particular, we require capital sufficient to meet or exceed: (1) the capital adequacy ratios established by rating agencies for maintenance of appropriate financial strength ratings, (2) the surplus requirements established by our ceding companies, and (3) the capital adequacy tests performed by regulatory authorities. We actively manage our capital and may seek to raise additional capital or return capital to our shareholders through common share repurchases and cash dividends (or a combination of such methods). We may also seek to manage our capital through repurchases of our outstanding debt in open market purchases, privately negotiated transactions or otherwise. Such repurchases, if any, will depend on prevailing market conditions, our liquidity requirements, contractual restrictions or other factors.

To the extent that our existing capital is insufficient to fund our future operating requirements or maintain our financial strength or debt ratings, we may need to raise additional capital through financings, which may be in the form of debt securities, preferred shares, common equity, bank credit facilities providing loans and/or letters of credit, or any combination of these sources. Any equity or debt financing, if available at all, may be on terms that are unfavorable to us. In the case of equity financings, dilution to our shareholders could result, and such securities may have rights, preferences and privileges that are senior to those of our outstanding securities. If we are not able to obtain adequate capital, our business, results of operations and financial condition could be adversely affected, which could include, among other things, the following possible outcomes: (1) potential downgrades in the financial strength ratings assigned by rating agencies to our reinsurance subsidiaries, which could place those reinsurance subsidiaries at a competitive disadvantage compared with higher-rated competitors, (2) reductions in the amount of business that our reinsurance subsidiaries are able to write in order to meet capital adequacy-based tests enforced by regulatory authorities, and (3) increases in the cost of bank credit and letters of credit. We can provide no assurance that, if needed, we would be able to obtain additional funds through financing on satisfactory terms or at all.

On August 4, 2004, our Board of Directors established a program authorizing the repurchase of our common shares. Since that date, our Board of Directors has approved increases in the repurchase program from time to time, most recently on February 16, 2011, to result in authority as of such date to repurchase up to a total of \$250.0 million of our common shares. In accordance with the share repurchase program, we repurchased 9,672,231 of our common shares in the open market for an aggregate amount of \$379.7 million at a weighted average cost including commissions of \$39.25 per share during the year ended December 31, 2010. On October 13, 2010, the Company entered into an agreement to purchase, for an aggregate of \$98.5 million in cash, the common share options issued to Travelers in connection with the Company's initial public offering in 2002. The options provided Travelers with the right to purchase 6,000,000 common shares from the Company for \$27.00 per share and were subsequently amended to provide for net share settlements. The options were purchased under the Company's share repurchase program and were cancelled. On January 17, 2011, the Company entered into an agreement to purchase, for an aggregate of \$47.9 million in cash, the common share options issued to RenaissanceRe in connection with the Company's initial public offering in 2002. The options provided RenaissanceRe with the right to purchase 2,500,000 common shares from the Company for \$27.00 per share and were subsequently amended to provide for net share settlements. The options were purchased under the Company's share repurchase program and were cancelled.

Our Board of Directors has also authorized the repurchase of up to \$250.0 million of our outstanding Series B Notes issued by Platinum Finance in open market purchases, privately negotiated transactions or otherwise. We have not repurchased any Series B Notes. The timing and amount of the repurchase transactions under our repurchase programs depends on a variety of factors, including market conditions, our liquidity requirements, contractual restrictions, corporate and regulatory considerations and other factors.

We do not have any material commitments for capital expenditures as of December 31, 2010.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements, as defined for purposes of SEC rules, which are not accounted for or disclosed in the consolidated financial statements as of December 31, 2010.

Contractual Obligations

Our contractual obligations as of December 31, 2010 by estimated maturity are presented below (\$ in thousands):

Contractual Obligations	Total	Less than 1 year	1 – 3 years	3 – 5 years	More than 5 years

Series B Notes due June 1, 2017 (1)	\$250,000	\$ –	\$ –	\$ –	\$ 250,000
Scheduled interest payments	121,875	18,750	37,500	37,500	28,125
Subtotal – Debt Obligations	\$371,875	\$ 18,750	\$ 37,500	\$ 37,500	\$ 278,125
Operating Leases (2)	\$5,963	\$ 2,779	\$ 2,972	\$ 115	\$ 97
Gross unpaid losses and LAE (3)	\$2,217,378	\$ 626,559	\$ 711,096	\$ 343,164	\$ 536,559

(1) See Note 7 to the Consolidated Financial Statements contained elsewhere in this Form 10-K.

(2) See Note 15 to the Consolidated Financial Statements contained elsewhere in this Form 10-K.

(3) There are generally no notional or stated amounts related to unpaid losses and LAE. Both the amounts and timing of future loss and LAE payments are estimates and subject to the inherent variability of legal and market conditions affecting the obligations and make the timing of cash outflows uncertain. The ultimate amount and timing of unpaid losses and LAE could differ materially from the amounts in the table above. Further, the gross unpaid losses and LAE do not represent all of the obligations that will arise under the contracts, but rather only the estimated liability incurred through December 31, 2010. There are reinsurance contracts that have terms extending into 2011 under which additional obligations will be incurred.

Recently Issued Accounting Standards

See Note 1 to the “Consolidated Financial Statements” contained elsewhere in this Form 10-K for a discussion of recently issued accounting standards.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

We believe that we are principally exposed to the following types of market risk: interest rate risk, credit risk, liquidity risk and foreign currency exchange rate risk.

Interest Rate Risk

We are exposed to fluctuations in interest rates. Changes in overall interest rates, generally measured by changes in the yield on risk free investments such as U.S. Treasury securities, will influence the fair values of our fixed maturity securities portfolio. Rising interest rates generally result in a decrease in the fair value of our fixed maturity securities portfolio. Conversely, a decline in interest rates will generally result in an increase in the fair value of our fixed maturity securities portfolio. Interest rate changes can also impact the timing of receipt of principal payments from mortgage-backed securities.

The following table shows the aggregate hypothetical impact on the fair value of our fixed maturity securities portfolio as of December 31, 2010, resulting from an immediate parallel shift in interest rates (\$ in thousands):

	Interest Rate Shift in Basis Points				
	- 100bp	- 50bp	Current	+ 50bp	+ 100bp
Total market value	\$3,222,146	\$3,134,661	\$3,047,973	\$2,964,278	\$2,884,091
Percent change in market value	5.7%	2.8%	–	(2.7%)	(5.4%)
Resulting net appreciation/(depreciation)	\$158,013	\$70,528	\$(16,160)	\$(99,855)	\$(180,042)

Credit Risk

Fixed Maturity Securities

Our principal invested assets are fixed maturity securities, which are subject to the risk of potential losses from adverse changes in market rates and prices and credit risk resulting from adverse changes in the borrower’s ability to meet its debt service obligations. Credit risk is often measured by interest rate spreads representing the difference between the yield of a debt instrument and that of a U.S. Treasury security of similar maturity. As the credit worthiness of a debt issuer declines, the interest rate spreads increase, which has the same effect on fair value as an increase in overall interest rates. An increase or widening of interest rate spreads generally results in a decrease in the fair value of our fixed maturity securities portfolio. Furthermore, a debt issuer may default on an interest or principal payment, in which case we may not collect all of the contractual cash flows associated with that security.

We manage credit risk by the selection of securities within our fixed maturity securities portfolio. Changes in credit spreads directly affect the market value of certain fixed maturity securities, but do not necessarily result in a change in the future expected cash flows associated with holding individual securities. Other factors, including liquidity, supply and demand, and changing risk preferences of investors, may affect market credit spreads without any change in the underlying credit quality of the security.

Reinsurance Premiums Receivable and Reinsurance Recoverable

Reinsurance premiums receivable from ceding companies are subject to credit risk. To mitigate credit risk related to reinsurance premiums receivable, we have established standards for ceding companies and, in most cases, have a contractual right of offset thereby allowing us to settle claims net of any such reinsurance premiums receivable. We also have reinsurance recoverable amounts from our retrocessionaires. To mitigate credit risk related to our reinsurance recoverable amounts, we consider the financial strength of our retrocessionaires when determining whether to purchase coverage from them. Retrocessional coverage is obtained from companies with a financial strength rating of "A-" or better by A.M. Best or from retrocessionaires whose obligations are fully collateralized for exposures where losses become known and are paid in a relatively short period of time. The financial performance and rating status of all material retrocessionaires are routinely monitored.

Reinsurance Brokers

In accordance with industry practice, we frequently pay amounts in respect of claims under contracts to reinsurance brokers for payment to the ceding companies. In the event that a broker fails to make such a payment, we may remain liable to the ceding company for the payment. When ceding companies remit premiums to reinsurance brokers, such premiums may be deemed to have been paid to us and the ceding company may no longer be liable to us for those amounts whether or not we actually receive the funds. Consequently, we assume a degree of credit risk associated with our brokers during the premium and loss settlement process.

Liquidity Risk

When financial markets experience a reduction in liquidity, our ability to conduct orderly investment transactions may be limited and may result in declines in fair values of the securities in our investment portfolio. In addition, if we require significant amounts of cash on short notice in excess of normal cash requirements (which could include claims on a major catastrophic event) in a period of market illiquidity, we may have difficulty selling our investments in a timely manner and may have to dispose of our investments for less than what may otherwise have been possible under other conditions.

Foreign Currency Exchange Rate Risk

We routinely transact business in various currencies other than the U.S. dollar, our financial reporting currency. Our principal exposure to foreign currency exchange rate risk is the transaction of business in foreign currencies. We may incur foreign currency exchange gains or losses as we ultimately settle claims required to be paid in foreign currencies. To the extent we do not seek to hedge our foreign currency risk or our hedges prove ineffective, the resulting impact of a movement in foreign currency exchange rate could materially adversely affect our financial condition and results of operations.

We manage our exposure to large foreign currency risks by holding invested assets denominated in non-U.S. dollar currencies in amounts that generally offset liabilities denominated in the same non-U.S. dollar currencies, thereby reducing our net exposure to foreign exchange volatility. We may, from time to time, hold more or less non-U.S. dollar denominated assets than non-U.S. dollar liabilities. As of December 31, 2010 and 2009, approximately 6.6% and 3.9%, respectively, of our total investments and cash and cash equivalents were denominated in currencies other than the U.S. dollar. Of our business written in the years ended December 31, 2010 and 2009, approximately 22.0 % and 15.1%, respectively, of premiums were written in currencies other than the U.S. dollar.

Item 8. Financial Statements and Supplementary Data

Our consolidated financial statements as of December 31, 2010 and 2009 and for each of the three years in the period ended December 31, 2010, together with the reports thereon by KPMG, our independent registered public accounting firm for the year ended December 31, 2010 and 2009, and KPMG LLP, our independent registered public accounting firm for the year ended December 31, 2008, are set forth on pages F-1 through F-35 hereto.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Disclosure Controls and Procedures

Our management, including the Chief Executive Officer and Chief Financial Officer, carried out an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of the end of the period covered by this Form 10-K. Based on that evaluation, our management, including the Chief Executive Officer and Chief Financial Officer, concluded that our disclosure controls and procedures are effective to provide reasonable assurance that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and timely reported as specified in the SEC's rules and forms, and is accumulated and communicated to our management, including the Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding

required disclosure.

Management's Annual Report on Internal Control Over Financial Reporting

Our management, including the Chief Executive Officer and Chief Financial Officer, is responsible for establishing and maintaining adequate internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15(d)-15(f) under the Exchange Act). Our management, under the supervision and with the participation of the Chief Executive Officer and Chief Financial Officer, conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2010 based on the integrated framework published in September 1992 by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, our management, including the Chief Executive Officer and Chief Financial Officer, concluded that our internal control over financial reporting was effective in that it provides reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America and includes those policies and procedures that provide reasonable assurance that transactions are recorded as necessary and that expenditures are being made only with proper authorization. KPMG, the independent registered public accounting firm that audited our consolidated financial statements included in this Form 10-K, has issued an attestation report on our internal control over financial reporting, which appears below.

Our disclosure controls and procedures and our internal control over financial reporting were designed to provide reasonable assurances that their objectives would be met. Our management, including the Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls and procedures or our internal control over financial reporting will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected.

Changes in Internal Control over Financial Reporting

No changes occurred during the three months ended December 31, 2010 in our internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Platinum Underwriters Holdings, Ltd.:

We have audited Platinum Underwriters Holdings, Ltd. and subsidiaries' internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying December 31, 2010 annual report on Form 10-K. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Platinum Underwriters Holdings, Ltd. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Platinum Underwriters Holdings, Ltd. and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of operations and comprehensive income, shareholders' equity and cash flows for each of the years in the two-year period then ended December 31, 2010, and our report dated February 18, 2011 expressed an unqualified opinion on those consolidated financial statements.

Item 9B. Other Information

None.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

The information required by this Item relating to our directors, executive officers and corporate governance is incorporated herein by reference to information included under the headings “Proposal 1 – Election of Directors – Information Concerning Nominees,” “Corporate Governance – Standing Committees of the Board of Directors – Governance Committee-Director Nomination Process,” “Information Concerning Executive Officers,” “Corporate Governance – Standing Committees of the Board of Directors – Audit Committee,” and “Section 16(a) Beneficial Ownership Reporting Compliance” of our definitive proxy statement to be filed pursuant to Regulation 14A of the Exchange Act for our 2011 Annual General Meeting of Shareholders (our “Proxy Statement”). We intend to file the Proxy Statement prior to April 30, 2011.

Code of Ethics

We have adopted a written Code of Ethics within the meaning of Item 406 of Regulation S-K of the Exchange Act. Our Code of Ethics applies to all of our directors and employees including, without limitation, our principal executive officer, our principal financial officer, our principal accounting officer and all of our employees performing financial or accounting functions. A copy of our Code of Ethics is posted on our website at www.platinumre.com and may be found under the “Investor Relations” section by clicking on “Corporate Governance.” In the event that we make any amendment to, or grant any waiver from, a provision of our Code of Ethics that requires disclosure under Item 5.05 of Form 8-K, in addition to filing a Form 8-K we will post such information on our website at the location specified above. We will provide, without charge, a copy of our Code of Ethics to any person submitting such request to our corporate secretary at our principal executive offices.

Item 11. Executive Compensation

The information required by this Item relating to executive compensation is incorporated herein by reference to information included under the headings “Director Compensation”, “Executive Compensation,” “Corporate Governance – Compensation Committee Interlocks and Insider Participation,” and “Compensation Committee Report” of our Proxy Statement.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Shareholder Matters

The information required by this Item relating to security ownership of certain beneficial owners and management is incorporated herein by reference to information included under the heading “Security Ownership of Certain Beneficial Owners and Management” of our Proxy Statement.

Equity Based Compensation Information

The following table summarizes information as of December 31, 2010 relating to our equity based compensation plans pursuant to which grants of options, restricted shares, share units or other rights to acquire shares may be granted from time to time.

Plan Category	(a)	(b)	(c)
---------------	-----	-----	-----

	Number of Securities to be Issued upon Exercise of Outstanding Options, Warrants and Rights (2)	Weighted Average Exercise Price of Outstanding Options, Warrants and Rights (3)	Number of Securities Remaining Available for Future Issuance under Equity Compensation Plans (excluding securities reflected in column (a))
Equity compensation plans approved by security holders (1)	2,089,021	\$ 31.64	3,401,155
Equity compensation plans not approved by security holders	—	—	—
Total	2,089,021	\$ 31.64	3,401,155

- (1) These plans consist of the 2002 Share Incentive Plan, which was approved by our shareholders at the 2004 Annual General Meeting of Shareholders; the 2006 Share Incentive Plan, which was approved by our shareholders at the 2006 Annual General Meeting of Shareholders; the 2010 Share Incentive Plan, which was approved by our shareholders at the 2010 Annual General Meeting of Shareholders; and the Share Unit Plan for Nonemployee Directors, which was approved by our sole shareholder prior to our initial public offering in 2002. The 2010 Share Incentive Plan replaced the 2006 Share Incentive Plan, which replaced the 2002 Share Incentive Plan, and no shares remain available for issuance under the 2006 or 2002 Share Incentive Plans. The Share Unit Plan for Nonemployee Directors was terminated on February 22, 2010 as to all future awards, and no shares remain available for issuance under such plan.
- (2) Column (a) includes outstanding options, restricted share units, and equity accounted performance share awards. Performance share awards are reflected at the maximum potential payout. In addition, a total of 217,669 unvested restricted shares are excluded from column (a) as those shares are considered issued at the time of grant. Unvested restricted shares are also excluded from column (c) as they are no longer available for future issuance.
- (3) Restricted share units and performance share awards are excluded from column (b) as there is no consideration due upon vesting of these awards.

Item 13. Certain Relationships and Related Transactions, and Director Independence

The information required by this Item relating to certain relationships and related transactions and director independence is incorporated by reference to information contained under the headings “Transactions with Related Persons” and “Corporate Governance – Independence of Directors” of our Proxy Statement.

Item 14. Principal Accountant Fees and Services

The information required by this Item relating to principal accountant fees and services is incorporated herein by reference to information contained under the heading “Proposal 4 – Approval of Independent Registered Public Accounting Firm for the 2011 Fiscal Year” of our Proxy Statement.

PART IV

Item 15. Exhibits and Financial Statement Schedules

Financial Statements

Our consolidated financial statements as of December 31, 2010 and 2009 and for each of the years in the three-year period ended December 31, 2010, together with the reports thereon by KPMG our independent registered public accounting firm for the years ended December 31, 2010 and 2009 and KPMG LLP, our independent registered public accounting firm for the year ended December 31, 2008, are set forth on pages F-1 through F-35 hereto.

Schedules Supporting Financial Statements

The schedules relating to our consolidated financial statements as of December 31, 2010 and 2009 and for each of the three years in the period ended December 31, 2010, together with the independent registered public accounting firms’ reports thereon, are set forth on pages S-1 through S-9 hereto. Schedules not referred to have been omitted as inapplicable or not required by Regulation S-X or information required is provided elsewhere in the consolidated financial statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Platinum Underwriters Holdings, Ltd.:

We have audited the accompanying consolidated balance sheets of Platinum Underwriters Holdings, Ltd. and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of operations and comprehensive income, shareholders' equity and cash flows for the two year period then ended December 31, 2010. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Platinum Underwriters Holdings, Ltd. and subsidiaries as of December 31, 2010 and 2009, and the results of their operations and their cash flows for the two year period then ended December 31, 2010, in conformity with U.S. generally accepted accounting principles.

As discussed in note 1 to the consolidated financial statements, the Company changed the manner in which it accounts for other-than-temporary impairments of debt securities in 2009.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Platinum Underwriters Holdings, Ltd. and subsidiaries' internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 18, 2011 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Platinum Underwriters Holdings, Ltd.:

We have audited the accompanying consolidated statement of operations and comprehensive income, shareholders' equity and cash flows of Platinum Underwriters Holdings, Ltd. and subsidiaries for the year ended December 31, 2008. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the results of operations, changes in shareholders' equity and cash flows of Platinum Underwriters Holdings, Ltd. for the year ended December 31, 2008, in conformity with U.S. generally accepted accounting principles.

Platinum Underwriters Holdings, Ltd. and Subsidiaries

Notes to Consolidated Financial Statements

For the years ended December 31, 2010, 2009 and 2008

1. Basis of Presentation and Significant Accounting Policies

Basis of Presentation and Consolidation

Platinum Underwriters Holdings, Ltd. ("Platinum Holdings") is a holding company that is domiciled in Bermuda and was organized in 2002. Through our reinsurance subsidiaries we provide property and marine, casualty and finite risk reinsurance coverages to a diverse clientele of insurers and select reinsurers on a worldwide basis.

Platinum Holdings and its consolidated subsidiaries (collectively the "Company") includes Platinum Holdings, Platinum Underwriters Bermuda, Ltd. ("Platinum Bermuda"), Platinum Underwriters Reinsurance, Inc. ("Platinum US"), Platinum Re (UK) Limited ("Platinum UK"), Platinum Underwriters Finance, Inc. ("Platinum Finance"), Platinum Regency Holdings ("Platinum Regency"), Platinum Administrative Services, Inc. and Platinum UK Services Company Limited. The terms "we," "us," and "our" refer to the Company, unless the context otherwise indicates.

Platinum Regency is an intermediate holding company based in Ireland and a wholly owned subsidiary of Platinum Holdings. Platinum Finance is a U.S. based intermediate holding company and a wholly owned subsidiary of Platinum Regency. We operate through two licensed reinsurance subsidiaries, Platinum Bermuda, a Bermuda reinsurance company, and Platinum US, a U.S. reinsurance company. Platinum Bermuda is a wholly owned subsidiary of Platinum Holdings and Platinum US is a wholly owned subsidiary of Platinum Finance. Platinum Administrative Services, Inc. and Platinum UK Services Company Limited are subsidiaries that provide administrative support services to the Company.

The consolidated financial statements have been prepared in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP"). All material inter-company transactions and accounts have been eliminated in preparing these consolidated financial statements.

The preparation of financial statements requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could materially differ from these estimates. The major estimates used in the preparation of the Company's consolidated financial statements, and therefore considered to be critical accounting estimates, include, but are not limited to, unpaid losses and loss adjustment expenses ("LAE"), premiums written and earned, valuation of investments and income taxes. In addition, estimates are used to evaluate risk transfer for assumed and ceded reinsurance transactions. Results of changes in estimates are reflected in results of operations in the period in which the change is made.

Certain prior period amounts have been reclassified in the consolidated statement of operations and in the consolidated statement of cash flows to conform to the current period presentation.

Significant Accounting Policies

Investments

Fixed maturity securities we own that we may not have the positive intent to hold until maturity and preferred stocks are classified as available-for-sale and reported at fair value, with related net unrealized gains or losses excluded from

earnings and included in shareholders' equity as a component of accumulated other comprehensive income (loss). Fixed maturity securities we own and have the intent to sell prior to maturity, or securities for which we have elected the fair value measurement attributes of the Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 825, "Financial Instruments" ("ASC 825"), are classified as trading securities. Trading securities are reported at fair value, with mark-to-market adjustments included in net realized gains and losses on investments and the related deferred income tax included in income tax expense in the consolidated statements of operations. Short-term investments are generally carried at amortized cost, which approximates fair value, and mature within one year from the purchase date.

The fair value of our fixed maturity securities, preferred stocks, and short-term investments are based on prices generally obtained from independent pricing vendors, index providers or broker-dealers.

Premiums and discounts on fixed maturity securities are amortized into net investment income over the life or estimated life of the security using the prospective effective yield method. Premiums and discounts on mortgage-backed and asset-backed securities that are amortized into net investment income also consider prepayment assumptions. These assumptions are consistent with the current interest rate and economic environment. The prospective adjustment method is used to adjust the value of mortgage-backed and asset-backed securities. Adjustments to the amortized cost of U.S. Treasury Inflation-Protected Securities resulting from changes in the consumer price index are recognized in net investment income. Realized gains and losses on the sale of securities are determined on the basis of the specific identification method.

We routinely review our available-for-sale investments to determine whether unrealized losses represent temporary changes in fair value or are the result of an other-than-temporary impairment ("OTTI"). The process of determining whether a security is other-than-temporarily impaired requires judgment and involves analyzing many factors. These factors include the overall financial condition of the issuer, the length of time and magnitude of an unrealized loss, specific credit events, the collateral structure and the credit support that may be applicable.

Platinum Underwriters Holdings, Ltd. and Subsidiaries
Notes to Consolidated Financial Statements, continued

In 2009 we adopted additional guidance under FASB ASC 320, "Investments – Debt and Equity Securities" ("ASC 320"). In accordance with this additional guidance, we recognize the portion of OTTI related to a credit loss in net income and the portion of OTTI related to all other factors is recognized in other comprehensive income or loss. The amount of the credit loss of an impaired debt security is the difference between the amortized cost and the greater of (i) the present value of expected future cash flows and (ii) the fair value of the security. The effect of adoption resulted in a cumulative adjustment to debt securities that were impaired prior to 2009, net of deferred tax, of \$14.2 million that was recorded in accumulated other comprehensive income or loss in the consolidated statement of shareholders' equity.

In accordance with ASC 320, we also consider our intent to sell a security and the likelihood that we will be required to sell a security before an unrealized loss is recovered. Our intent to sell a security is based, in part, on adverse changes in the credit worthiness of a debt issuer, pricing and other market conditions and our anticipated net cash flows. If we determine that we intend to sell a security that is in an unrealized loss position, then the unrealized loss related to such a security, representing the difference between the security's amortized cost and its fair value, is recognized as a net impairment loss in our consolidated statements of operations at the time we determine our intent is to sell.

Cash and Cash Equivalents

Cash and cash equivalents are carried at cost, which approximates fair value, and include all securities that at their purchase date have a maturity of less than 90 days. Cash and cash equivalents consist primarily of investments in money market funds, time deposits and short-term obligations of governments and agencies.

Premiums Written and Earned

Assumed reinsurance premiums earned are recognized as revenues, net of any related ceded retrocessional coverage purchased. Both assumed and ceded premiums written are recognized as earned generally on a basis proportionate with the coverage period. Assumed premiums written not yet recognized as revenue are recorded on the consolidated balance sheets as unearned premiums; ceded premiums written not yet earned are recorded on the consolidated balance sheets as prepaid reinsurance premiums. Premiums receivable include premiums that have been reported and billed and are in the course of collection and an estimate of premiums not yet reported by our ceding companies. Unearned premiums and estimated premiums receivable are estimates based on estimated written premiums and are subject to judgment and uncertainty.

Due to the nature of reinsurance, ceding companies routinely report and remit premiums subsequent to the contract coverage period. Consequently, premiums written include amounts reported by the ceding companies, supplemented by our estimates of premiums that are written but not reported. In addition, we estimate the unearned portion of the premiums. Earned premiums, which are recorded in revenues, are the premiums written less the unearned premiums. The premium estimation process considers the terms and conditions of the reinsurance contracts and assumes that the contracts will remain in force until expiration. The estimation of written premiums could be affected by early cancellation, election of contract provisions for cut-off and return of unearned premiums or other contract disruptions. The time lag involved in the process of reporting premiums is shorter than the lag in reporting losses. Premiums are generally reported in full within two years from the inception of the contract. The potential net impact on the results of operations of changes in premiums earned is reduced by the accrual of losses and acquisition expenses related to such premiums earned. Any adjustments to written and earned premiums are accounted for as changes in estimates and are reflected in the results of operations in the period in which they are made. Any

adjustments could be material and could significantly impact earnings in the period they are recorded.

Certain of our reinsurance contracts include provisions that adjust premiums based upon the loss experience of the contracts. We take these provisions into account when determining our estimate of premiums written and unearned premiums. Reinstatement premiums are the premiums charged for the restoration of the reinsurance limit of a reinsurance contract to its full amount, generally coinciding with the payment by the reinsurer of losses. These premiums relate to and are earned over the future coverage obtained for the remainder of the contract term. Any unearned premiums existing at the time a contract limit is exhausted or reinstated is earned immediately. Additional premiums are premiums that are triggered by losses and are earned immediately. Premiums written and unearned premiums include estimates of reinstatement premiums and additional premiums based on reinsurance contract provisions and loss experience and rely on the estimates of unpaid losses and LAE.

An allowance for uncollectible premiums is established for possible non-payment of premiums receivable, as deemed necessary. We analyze whether an allowance is deemed necessary based on our historical experience, the general profile of our ceding companies and our ability in most cases to contractually offset premiums receivable against losses and LAE and commission amounts payable to the same parties.

Funds Held by Ceding Companies

We may write business on a funds held basis from time to time. Under these contractual arrangements, the ceding company holds the net funds that would otherwise be remitted to us and generally credits the funds held balance with interest income at a negotiated rate established in the contract. Interest income on funds held by ceding companies is included in net investment income.

Deferred Acquisition Costs

Costs of acquiring business, consisting primarily of commissions and other underwriting expenses that vary with and are directly related to the production of business, are deferred and amortized over the period that the corresponding premiums are earned. On a regular basis, an analysis of the recoverability of deferred acquisition costs is performed based on the estimated profitability of the underlying reinsurance contracts, including anticipated investment income. Any adjustments are reflected in the results of operations in the period in which they are made. A liability is established, if necessary, to provide for losses that may exceed the related unearned premiums. Deferred acquisition costs amortized in 2010, 2009 and 2008 were \$113.7 million, \$133.6 million and \$182.6 million, respectively.

Platinum Underwriters Holdings, Ltd. and Subsidiaries
Notes to Consolidated Financial Statements, continued

Debt Obligations and Deferred Debt Issuance Costs

Costs incurred in issuing debt are capitalized and amortized over the life of the debt. The amortization of these costs is included in interest expense in the consolidated statements of operations.

Unpaid Losses and Loss Adjustment Expenses

Unpaid losses and LAE are estimated based upon information received from ceding companies regarding our liability for unpaid losses and LAE, adjusted for our estimates of losses and LAE for which ceding company reports have not been received, our historical experience for unreported claims and industry experience for unreported claims. Unpaid losses and LAE include estimates of the cost of claims that were reported, but not yet paid, and the cost of claims incurred but not yet reported. In addition, we estimate our unallocated loss adjustment expense reserves based on our administrative costs of managing claims.

Unpaid losses and LAE represent management's best estimate at a given point in time and are subject to the effects of trends in loss severity and frequency. These estimates are reviewed regularly and adjusted as experience develops or new information becomes available. Any adjustments are accounted for as changes in estimates and are reflected in the results of operations in the period in which they are made. It is possible that the ultimate liability may materially differ from such estimates.

Reinsurance Ceded

Premiums written, premiums earned and net losses and LAE reflect the net effects of assumed and ceded reinsurance transactions.

Estimated amounts recoverable from retrocessionaires on unpaid losses and LAE are determined based on our estimate of assumed ultimate losses and LAE and the terms and conditions of our retrocessional contracts. The estimates of retroceded amounts recoverable are reflected as assets.

Reinsurance Deposit Assets and Liabilities

Reinsurance accounting is followed for assumed and ceded transactions when risk transfer requirements have been met. Risk transfer analysis involves evaluating significant assumptions relating to the amount and timing of expected cash flows, as well as the interpretation of underlying contract terms. Reinsurance contracts that do not transfer sufficient insurance risk are accounted for as deposits and assets or liabilities are initially recorded for the same amount as assets paid or received. Interest income or expense related to the deposit is recognized as incurred. Profit margins are earned over the settlement period of the contractual obligations.

Earnings Per Common Share

Basic earnings per common share is computed by dividing net income available to common shareholders by the weighted average number of common shares outstanding for the period. Diluted earnings per common share reflects the basic earnings per common share calculation components adjusted for the dilutive effect of the conversion of preferred shares, share options, restricted shares and restricted share units. Securities that are convertible into common shares that are anti-dilutive are not included in the calculation of diluted earnings per common share.

Income Taxes

We provide for income taxes for our subsidiaries operating in income tax paying jurisdictions. We recognize deferred tax assets and liabilities based on the temporary differences between the financial statement carrying amounts and the tax bases of assets and liabilities. Such temporary differences are primarily due to tax basis discount on unpaid losses and LAE and unearned premiums, deferred policy acquisition costs and investments. A valuation allowance against deferred tax assets is recorded if it is more likely than not that all, or some portion, of the benefits related to deferred tax assets will not be realized.

Share-Based Compensation

We recognize share-based compensation expenses of all share awards, based on fair value over their vesting period. The fair value of option awards is determined on the grant date using the Black-Scholes option pricing model and is amortized into earnings over the vesting period. The fair values of restricted share and restricted share unit awards are determined on the grant date and are amortized into earnings over the vesting period. The cost of performance-based share awards is based on the estimated number of shares or share units that are expected to be issued at the end of the performance period, and is amortized into earnings over the performance and vesting period.

Foreign Currency Exchange Gains and Losses

Our reporting and functional currency and that of our reinsurance subsidiaries is U.S. dollars. Transactions conducted in other than our reporting currency are remeasured into U.S. dollars and the resulting foreign exchange gains and losses are included in net foreign currency exchange gains or losses. Foreign currency exchange gains and losses related to securities classified as trading securities are included in net foreign currency exchange gains and losses.

Recently Issued Accounting Standards

In October 2010, the FASB issued Accounting Standards Update (“ASU”) No. 2010-26, “Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts” (“ASU 2010-26”). ASU 2010-26 modifies the types of costs that may be deferred, allowing insurance companies to only defer costs directly related to a successful contract acquisition or renewal. These costs include incremental direct costs of successful contracts, the portion of employees’ salaries and benefits related to time spent on acquisition activities for successful contracts and other costs incurred in the acquisition of a contract. Additional disclosure of the type of acquisition costs capitalized is also required. ASU 2010-26 is effective on a prospective basis for interim and annual reporting periods beginning after December 15, 2011, with early adoption permitted as of the beginning of a company’s annual period. We are currently evaluating the impact of the adoption of ASU 2010-26 on our financial position and results of operations.

In July 2010, the FASB issued ASU No. 2010-20, “Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses” (“ASU 2010-20”). ASU 2010-20 requires disclosure relating to the credit quality of an entity’s financing receivables and its allowance for credit losses. The guidance is effective for interim and annual periods ending on or after December 15, 2010. We adopted the guidance as of December 31, 2010 and it did not have a material impact on the presentation of our consolidated financial statements.

In January 2010, the FASB issued ASU No. 2010-06, “Fair Value Measurements and Disclosures (Topic 820) – Improving Disclosures about Fair Value Measurements” (“ASU 2010-06”). This update requires additional disclosures about fair value measurements, including disclosures regarding (i) the amounts and reasons for significant transfers in and out of Level 1 and Level 2 fair value measurements and separate presentation of purchases, sales, issuances and settlements of items measured using significant unobservable inputs, as previously disclosed for Level 3, (ii) inputs and valuation techniques used to measure fair value for financial assets and liabilities that fall in either Level 2 or Level 3, (iii) the activity within Level 3 fair value measurements, and (iv) disaggregation of financial assets and liabilities measured at fair value into classes of financial assets and liabilities. The requirements were effective for interim and annual reporting periods beginning after December 15, 2009, except for the disclosure about purchases, sales, issuances and settlements which is effective for fiscal years beginning after December 15, 2010 and for interim periods within those fiscal years. We adopted the guidance as of January 1, 2010 and have reflected these additional disclosures in Note 3.

In June 2009, the FASB issued additional guidance under ASC 810, “Consolidation” (“ASC 810”), which amends the consolidation guidance applicable to variable interest entities (“VIEs”). The amendments affected the overall consolidation analysis under ASC 810. In particular, the amendments modified the approach for determining the primary beneficiary of a VIE. We adopted the guidance as of January 1, 2010 and it did not have an effect on our financial position and results of operations.

Non-U.S. governments	568,630	10,359	625	-	578,364
Total fixed maturity available-for-sale securities	3,590,081	54,174	99,871	30,332	3,514,052
Preferred stocks	1,879	2,018	-	-	3,897
Total available-for-sale securities	\$3,591,960	\$56,192	\$99,871	\$30,332	\$3,517,949

Our available-for-sale securities are U.S. dollar denominated securities. U.S. Government agencies consists of securities issued by financial institutions under the Temporary Liquidity Guarantee Program guaranteed by the Federal Deposit Insurance Corporation. Non-U.S. governments consist primarily of securities issued by governments and financial institutions that are explicitly guaranteed by the respective government.

Trading Securities

The following table sets forth the fair value of our fixed maturity trading securities as of December 31, 2010 and 2009 (\$ in thousands):

	December 31,	
	2010	2009
Non-U.S. dollar denominated securities:		
Non-U.S. governments	\$ 140,089	\$ 100,384
U.S. Government agencies	15,903	16,423
Corporate bonds	68	77
Insurance-linked securities	26,086	25,682
Total fixed maturity trading securities	\$ 182,146	\$ 142,566

We have elected to record our investments in insurance-linked securities at fair value. Insurance-linked securities have exposure to catastrophe loss, which we actively manage. We believe that the various risk elements of insurance-linked securities are more appropriately accounted for in accordance with the fair value measurement attributes of ASC 825. The mark-to-market adjustments on securities recognized under ASC 825 contributed \$0.2 million and \$3.4 million to net realized gains on investments for the years ended December 31, 2010 and 2009, respectively.

At acquisition, we determine our trading intent in the near term for securities accounted for in accordance with ASC 825. If we do not intend to sell these securities in the near term, the purchases and sales are included in investing activities in our consolidated statements of cash flows, otherwise they are included in operating activities. For the year ended December 31, 2010, there were no purchases or sales of trading securities under ASC 825. For the year ended December 31, 2009, purchases of \$164.7 million and sales of \$153.2 million of securities were classified as investing activities and net sales of \$208.2 million were classified as net fixed maturity trading securities activities and included in operating activities in the consolidated statements of cash flows. For the year ended December 31, 2008, purchases of \$196.4 million were classified as net fixed maturity trading securities activities and included in operating activities in the statements of cash flows.

Other-Than-Temporary Impairments

We consider the credit worthiness of our corporate bond portfolio by reviewing various performance metrics of the issuer, including financial condition and credit ratings as well as other public information. We determined that none of our corporate bonds were other-than-temporarily impaired in the years ended December 31, 2010 and 2009. We recorded net impairment losses related to corporate bonds of \$7.6 million for the year ended December 31, 2008. As of December 31, 2010, the single largest unrealized loss within our corporate bond portfolio was \$0.5 million related to a security with an amortized cost of \$10.1 million.

Platinum Underwriters Holdings, Ltd. and Subsidiaries
Notes to Consolidated Financial Statements, continued

We analyze our commercial mortgage-backed securities ("CMBS") on a periodic basis using default loss models based on the performance of the underlying loans. Performance metrics include delinquencies, defaults, foreclosures, debt-service-coverage ratios and cumulative losses incurred. The expected losses for a mortgage pool are compared to the current level of credit support, which generally represents the point at which our security would experience losses. We evaluate projected cash flows as well as other factors in order to determine if a credit impairment has occurred. We recorded net impairment losses related to CMBS of \$7.7 million and \$2.7 million for the years ended December 31, 2010 and 2009, respectively. We determined that none of our CMBS were other-than-temporarily impaired in the year ended December 31, 2008. As of December 31, 2010, the single largest unrealized loss within our CMBS portfolio was \$0.5 million related to a security with an amortized cost of \$10.0 million.

Our residential mortgage-backed securities ("RMBS") include U.S. Government agency RMBS and non-agency RMBS. Our securities with underlying sub-prime mortgages as collateral are included in asset-backed securities ("ABS"). We analyze our non-agency RMBS and sub-prime ABS on a periodic basis using default loss models based on the performance of the underlying loans. Performance metrics include delinquencies, defaults, foreclosures, prepayment speeds and cumulative losses incurred. The expected losses for a mortgage pool are compared to the current level of credit support, which generally represents the point at which our security would experience losses. We evaluate projected cash flows as well as other factors in order to determine if a credit impairment has occurred. We recorded net impairment losses related to non-agency RMBS of \$11.2 million, \$8.4 million and \$15.8 million for the years ended December 31, 2010, 2009 and 2008, respectively. As of December 31, 2010, the single largest unrealized loss within our RMBS portfolio was \$5.6 million related to a non-agency RMBS security with an amortized cost of \$6.5 million.

We also recorded net impairment losses related to sub-prime ABS of \$17.7 million, \$5.3 million and \$1.6 million for the years ended December 31, 2010, 2009 and 2008, respectively. As of December 31, 2010, the single largest unrealized loss within our sub-prime ABS portfolio was \$3.2 million related to a security with an amortized cost of \$6.8 million.

The net impairment losses for CMBS, non-agency RMBS and sub-prime ABS recorded in 2010 and 2009 reflect the portion of OTTI attributed to the credit losses for the impaired securities. The net impairment losses recorded in 2008 reflect the entire difference between the amortized cost basis and fair value of the impaired securities at the balance sheet date. The effect of the adoption of additional guidance under ASC 320 in 2009 resulted in before-tax adjustments to increase the amortized cost and net unrealized losses by \$14.3 million for non-agency RMBS and \$0.8 million for sub-prime ABS that were recorded in accumulated other comprehensive income or loss in the consolidated statement of shareholders' equity.

The following table sets forth a summary of the cumulative credit losses recognized on our fixed maturity available-for-sale securities for the years ended December 31, 2010 and 2009 (\$ in thousands):

	2010	2009
Beginning balance, January 1	\$18,695	\$-
Cumulative effect of accounting change	-	2,300
Credit losses on securities not previously impaired	18,141	11,133
Additional credit losses on securities previously impaired	18,469	5,262
Reduction for paydowns and securities sold	(6,104)	-
Reduction for increases in cash flows expected to be collected	(356)	-

Ending balance, December 31	\$48,845	\$18,695
-----------------------------	----------	----------

As of December 31, 2010, the total cumulative credit losses related to CMBS, non-agency RMBS and sub-prime ABS. The cumulative credit losses we recorded on CMBS of \$5.2 million were on four securities issued in 2006 and 2007. As of December 31, 2010, 5.3% of the mortgage pools backing these securities were 90 days or more past due and 0.1% of the mortgage pools had incurred cumulative losses. For these securities, the expected losses for the underlying mortgage pools were greater than the remaining credit support of 17.1%. The cumulative credit losses we recorded on non-agency RMBS and sub-prime ABS of \$43.6 million were on 26 securities issued from 2004 to 2007. As of December 31, 2010, 19.5% of the mortgage pools backing these securities were 90 days or more past due and 4.8% of the mortgage pools had incurred cumulative losses. For these securities, the expected losses for the underlying mortgage pools were greater than the remaining credit support of 10.5%.

As of December 31, 2010, we no longer held any preferred stocks. For preferred stocks we previously held, we evaluated the unrealized losses of our preferred stocks by individual issuer and determined if we could forecast a reasonable period of time by which the fair value of the securities would increase and we would recover our cost. If we were unable to forecast a reasonable period of time in which to recover the cost of our preferred stocks, we recorded a net impairment loss in our consolidated statement of operations equivalent to the entire unrealized loss. We recorded no net impairment losses related to our preferred stocks for the year ended December 31, 2010. We recorded net impairment losses related to our preferred stocks of \$1.2 million and \$5.7 million for the years ended December 31, 2009 and 2008, respectively.

Unrealized Gains and Losses

The following table sets forth the net changes in unrealized investment gains and losses on our available-for-sale securities for the years ended December 31, 2010, 2009 and 2008 (\$ in thousands):

	2010	2009	2008
Gross change in unrealized investment gains and losses	\$50,335	\$129,999	\$(178,318)
Less: deferred tax	(4,818)	(11,017)	13,670
Cumulative effect of accounting change, net of deferred tax	–	14,244	–
Net change in unrealized gains and losses	\$45,517	\$133,226	\$(164,648)

Asset-backed securities	–	–	1,075	445
Municipal bonds	670,592	28,773	187,159	4,244
Non-U.S. governments	4,455	543	59,815	565
Total	\$1,117,571	\$48,613	\$1,435,492	\$22,022
Twelve months or more:				
U.S. Government	\$–	\$–	\$–	\$–
Corporate bonds	–	–	59,423	8,819
Commercial mortgage-backed securities	22,016	1,393	160,039	28,288
Residential mortgage-backed securities	56,297	29,057	94,969	45,347
Asset-backed securities	21,816	4,924	28,238	25,563
Municipal bonds	2,032	87	3,015	104
Non-U.S. governments	–	–	1,661	60
Total	\$102,161	\$35,461	\$347,345	\$108,181
Total unrealized losses:				
U.S. Government	\$388,087	\$17,807	\$594,343	\$5,797
Corporate bonds	37,334	1,059	93,816	9,100
Commercial mortgage-backed securities	22,016	1,393	178,140	28,532
Residential mortgage-backed securities	73,400	29,488	635,575	55,793
Asset-backed securities	21,816	4,924	29,313	26,008
Municipal bonds	672,624	28,860	190,174	4,348
Non-U.S. governments	4,455	543	61,476	625
Total	\$1,219,732	\$84,074	\$1,782,837	\$130,203

The fair values of fixed maturity available-for-sale securities included in the table above relate only to securities in an unrealized loss position as of the reporting date.

We believe that the gross unrealized losses in our available-for-sale portfolio represent temporary declines in fair value. We believe that the unrealized losses are not necessarily predictive of ultimate performance and that the provisions we have made for net impairment losses are adequate. However, economic conditions may deteriorate more than expected and may adversely affect the expected cash flows of our securities, which in turn may lead to impairment losses recorded in future periods. Conversely, economic conditions may improve more than expected and

favorably increase the expected cash flows of our securities, which would be earned through net investment income over the remaining life of the security.

Net Investment Income

The following table sets forth our net investment income for the years ended December 31, 2010, 2009 and 2008 (\$ in thousands):

	2010	2009	2008
Fixed maturity securities	\$ 135,394	\$ 162,786	\$ 162,857
Short-term investments and cash and cash equivalents	1,857	1,741	24,340
Funds held by ceding companies	1,815	4,192	3,476
Subtotal	139,066	168,719	190,673
Less: investment expenses	4,681	4,778	4,099
Net investment income	\$ 134,385	\$ 163,941	\$ 186,574

Net Realized Gains and Losses on Investments

The following table sets forth our net realized gains and losses on investments for the years ended December 31, 2010, 2009 and 2008 (\$ in thousands):

	2010	2009	2008
Gross realized gains on the sale of investments	\$ 115,679	\$ 86,512	\$ 53,178
Gross realized losses on the sale of investments	(9,285)	(5,588)	(5,605)
Net gains on the sale of investments	106,394	80,924	47,573
Mark-to-market adjustments on fixed maturity trading securities	1,397	(2,294)	9,681
Net realized gains on investments	\$ 107,791	\$ 78,630	\$ 57,254

Maturities

Actual maturities of our fixed maturity available-for-sale and trading securities could differ from stated maturities due to call or prepayment provisions. The following table sets forth the amortized cost and fair value of our fixed maturity available-for-sale and trading securities by stated maturity as of December 31, 2010 (\$ in thousands):

	Amortized Cost	Fair Value
Due in one year or less	\$ 102,847	\$ 104,080
Due from one to five years	739,357	762,268
Due from five to ten years	888,241	882,726
Due in ten or more years	918,090	905,560
Mortgage-backed and asset-backed securities	415,598	393,339
Total	\$ 3,064,133	\$ 3,047,973

Restricted Investments

Certain of our investments are restricted to support our reinsurance operations. Investments with a carrying value of \$5.1 million were on deposit with U.S. regulatory authorities as of December 31, 2010. Investments with a carrying value of \$69.8 million and cash and cash equivalents of \$9.9 million as of December 31, 2010 were held in trust to collateralize obligations under various reinsurance contracts. We also issue letters of credit under a credit facility, see Note 7 for a description of our assets held in trust to secure those letters of credit.

3. Fair Value Measurements

The fair values of our financial assets and liabilities are determined primarily through the use of observable inputs. Observable inputs reflect the assumptions market participants would use in pricing the asset or liability based on market data obtained from external independent sources. Unobservable inputs reflect management's assumptions about what market participants' assumptions would be in pricing the asset or liability based on the best information available. We classify our financial assets and liabilities in the fair value hierarchy based on the lowest level input that is significant to the fair value measurement. This classification requires judgment in assessing the market and pricing methodologies for a particular security. The fair value hierarchy is comprised of the following three levels:

Platinum Underwriters Holdings, Ltd. and Subsidiaries
Notes to Consolidated Financial Statements, continued

Level 1: Valuations are based on unadjusted quoted prices in active markets for identical financial assets or liabilities;

Level 2: Valuations of financial assets and liabilities are based on prices obtained from independent pricing vendors, index providers, or broker-dealers using observable inputs; and

Level 3: Valuations are based on unobservable inputs for assets and liabilities where there is little or no market activity. Management's assumptions and/or internal valuation pricing models may be used to determine the fair value of financial assets or liabilities.

The following table presents the fair value measurement levels for all financial assets and liabilities which the Company has recorded at fair value as of December 31, 2010 and December 31, 2009 (\$ in thousands):

	Fair Value Measurement Using:			
	Total	Level 1	Level 2	Level 3
December 31, 2010:				
Financial assets:				
U.S. Government	\$391,303	\$391,303	\$-	\$-
U.S. Government agencies	116,450	-	116,450	-
Corporate bonds	366,968	-	366,968	-
Commercial mortgage-backed securities	203,313	-	203,313	-
Residential mortgage-backed securities	166,458	-	164,009	2,449
Asset-backed securities	23,568	-	22,499	1,069
Municipal bonds	1,537,432	-	1,537,432	-
Non-U.S. governments	216,395	57,643	158,752	-
Insurance-linked securities	26,086	-	26,086	-
Preferred stocks	-	-	-	-
Short-term investments	176,648	-	176,648	-
Total	\$3,224,621	\$448,946	\$2,772,157	\$3,518
Financial liabilities:				
Derivative instrument	4,871	-	-	4,871
Total	\$4,871	\$-	\$-	\$4,871

	Fair Value Measurement Using:			
	Total	Level 1	Level 2	Level 3
December 31, 2009:				
Financial assets:				
U.S. Government	\$608,697	\$608,697	\$-	\$-
U.S. Government agencies	117,505	-	117,505	-
Corporate bonds
