SECURITIES AND EXCHANGE COMMISSION

Washington, DC 20549

FORM 10-Q/A
(Amendment No. 1)

(Mark One)

Quarterly Report Pursuant to Section 13 or 15 (d) of the Securities Exchange Act of 1934
For the Quarterly Period Ended June 30, 2011

OR

Transition Report Pursuant to Section 13 or 15 (d) of the Securities Exchange Act of 1934
For the transition period from _____ to _____

Commission File Number 1-11277

VALLEY NATIONAL BANCORP

(Exact name of registrant as specified in its charter)

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

New Jersey (State or other jurisdiction of Incorporation or Organization)	22-2477875 (I.R.S. Employer Identification Number)
1455 Valley Road Wayne, NJ (Address of principal executive office)	07470 (Zip code)
973-305-8800 (Registrant's telephone number, including area code)	

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the Registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files.) Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act (check one):

Large accelerated filer Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company) Smaller reporting company

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date. Common Stock (no par value), of which 169,997,703 shares were outstanding as of August 4, 2011.

EXPLANATORY NOTE

Valley National Bancorp (the Company) is filing this Amendment No. 1 to its Quarterly Report on Form 10-Q for the quarterly period ended June 30, 2011, originally filed with the Securities and Exchange Commission (SEC) on August 8, 2011 (the Original Filing), to expand the disclosures regarding the Company's other-than-temporary impairment analysis of debt securities and additional factors considered in such analysis specific to two trust preferred securities issued by one bank holding company in response to certain comments received from the Staff of the SEC. These changes have been made to Part I, Items 1 (Note 7 to the financial statements) and 2 (the Other-Than-Temporary Impairment Analysis section of Management's Discussion and Analysis of Financial Condition and Results of Operations). The financial condition and results of operations included in this Form 10-Q/A are unchanged from the presentation in the Original Filing.

For convenience and ease of reference, the Company is filing this Form 10-Q/A in its entirety with the changes described in the prior paragraph. Except for those changes, the Company has not modified or updated disclosures presented in the Original Filing. Accordingly, this Form 10-Q/A does not reflect events occurring after the date of the Original Filing, August 8, 2011, or update the disclosure in the original filing to reflect

events occurring after the date of the Original Filing.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****(Unaudited)****Note 1. Basis of Presentation**

The unaudited consolidated financial statements of Valley National Bancorp, a New Jersey Corporation (Valley), include the accounts of its commercial bank subsidiary, Valley National Bank (the Bank), and all of Valley's direct or indirect wholly-owned subsidiaries. All inter-company transactions and balances have been eliminated. The accounting and reporting policies of Valley conform to U.S. generally accepted accounting principles (U.S. GAAP) and general practices within the financial services industry. In accordance with applicable accounting standards, Valley does not consolidate statutory trusts established for the sole purpose of issuing trust preferred securities and related trust common securities.

In the opinion of management, all adjustments (which include only normal recurring adjustments) necessary to present fairly Valley's financial position, results of operations and cash flows at June 30, 2011 and for all periods presented have been made. The results of operations for the three and six months ended June 30, 2011 are not necessarily indicative of the results to be expected for the entire fiscal year.

In preparing the unaudited consolidated financial statements in conformity with U.S. GAAP, management has made estimates and assumptions that affect the reported amounts of assets and liabilities as of the date of the consolidated statements of financial condition and results of operations for the periods indicated. Material estimates that are particularly susceptible to change are: the allowance for loan losses; the evaluation of goodwill and other intangible assets, and investment securities for impairment; fair value measurements of assets and liabilities; and income taxes. Estimates and assumptions are reviewed periodically and the effects of revisions are reflected in the consolidated financial statements in the period they are deemed necessary. While management uses its best judgment, actual amounts or results could differ significantly from those estimates. The current economic environment has increased the degree of uncertainty inherent in these material estimates.

Certain information and footnote disclosure normally included in financial statements prepared in accordance with U.S. GAAP and industry practice have been condensed or omitted pursuant to rules and regulations of the SEC. These financial statements should be read in conjunction with the consolidated financial statements and notes thereto included in Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

On May 20, 2011, Valley paid a five percent common stock dividend to shareholders of record on May 6, 2011. All common share and per common share data presented in the consolidated financial statements and the accompanying notes below were adjusted to reflect the dividend.

Note 2. Earnings Per Common Share

The following table shows the calculation of both basic and diluted earnings per common share for the three and six months ended June 30, 2011 and 2010:

	Three Months Ended		Six Months Ended	
	2011	2010	2011	2010
	June 30, (in thousands, except for share data)			
Net income	\$ 36,894	\$ 33,010	\$ 73,479	\$ 60,373
Basic weighted-average number of common shares outstanding	169,843,354	169,009,302	169,757,717	168,921,009
Plus: Common stock equivalents	9,558	4,332	8,677	1,855
	169,852,912	169,013,634	169,766,394	168,922,864

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Diluted weighted-average number of common shares
outstanding

Earnings per common share:								
Basic	\$	0.22	\$	0.20	\$	0.43	\$	0.36
Diluted		0.22		0.20		0.43		0.36

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Common stock equivalents, in the table above, represent the effect of outstanding common stock options and warrants to purchase Valley's common shares, excluding those with exercise prices that exceed the average market price of Valley's common stock during the periods presented and therefore, would have an anti-dilutive effect on the diluted earnings per common share calculation. Anti-dilutive common stock options and warrants totaled approximately 6.8 million shares for both the three and six months ended June 30, 2011 as compared to 6.9 million and 7.2 million shares for the three and six months ended June 30, 2010, respectively.

Note 3. Comprehensive Income

Valley's components of other comprehensive income, net of deferred tax, include unrealized gains (losses) on securities available for sale (including the non-credit portion of any other-than-temporary impairment charges relating to certain securities during the period); unrealized gains (losses) on derivatives used in cash flow hedging relationships; and the unfunded portion of its various employee, officer and director pension plans.

The following table shows changes in each component of comprehensive income for the three and six months ended June 30, 2011 and 2010:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Net income	\$ 36,894	\$ 33,010	\$ 73,479	\$ 60,373
Other comprehensive (loss) income, net of tax:				
Net change in unrealized gains and losses on securities available for sale	6,074	4,123	7,886	8,329
Net change in non-credit impairment losses on securities	491	376	593	659
Net pension benefits adjustment	291	253	583	506
Net change in unrealized gains and losses on derivatives used in cash flow hedging relationships	(3,792)	(1,562)	(2,960)	(2,760)
Less reclassification adjustment for gains and losses included in net income	(9,746)	(958)	(10,671)	355
Total other comprehensive (loss) income, net of tax	(6,682)	2,232	(4,569)	7,089
Total comprehensive income	\$ 30,212	\$ 35,242	\$ 68,910	\$ 67,462

Note 4. Business Combinations**Acquisitions**

On April 28, 2011, Valley entered into a merger agreement to acquire State Bancorp, Inc. (Nasdaq:STBC) (State Bancorp). State Bancorp is the holding company for State Bank of Long Island, a commercial bank with approximately \$1.6 billion in assets, \$1.1 billion in loans, and \$1.3 billion in deposits at June 30, 2011, covering 4 New York counties, and 17 branches in Nassau, Suffolk, Queens, and Manhattan. The shareholders of State Bancorp will receive a fixed one-for-one exchange ratio for Valley National Bancorp common stock. This fixed exchange ratio was determined after consideration of Valley's recently declared five percent stock dividend paid on May 20, 2011. The total consideration for the acquisition is estimated to be \$222 million, resulting in an estimated \$131 million of intangible assets which are dependent on the fair value of State Bancorp's assets and liabilities and Valley's stock price on the closing date of the merger. Valley has received approval from both the Office of the Comptroller of the Currency and the Federal Reserve Bank of New York to complete the merger. Valley anticipates the closing

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

of the merger will occur during the fourth quarter of 2011, contingent upon receiving approval of State Bancorp shareholders, approval to repurchase State Bancorp's senior preferred stock under the Treasury's TARP program, and other customary closing conditions.

On December 14, 2010, Masters Coverage Corp., an all-line insurance agency that is a wholly-owned subsidiary of the Bank, acquired certain assets of S&M Klein Co. Inc., an independent insurance agency located in Queens, New York.

Table of Contents

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

The purchase price totaled \$5.3 million, consisting of \$3.3 million in cash and earn-out payments totaling \$2.0 million that are payable over a four year period, subject to certain customer retention and earnings performance. The transaction generated goodwill and other intangible assets totaling \$1.9 million and \$3.3 million, respectively. Other intangible assets consisted of a customer list, covenants not to compete, and a trade name with a weighted average amortization period of 16 years.

FDIC-Assisted Transactions

On March 11, 2010, the Bank assumed all of the deposits, and acquired certain assets of LibertyPointe Bank, a New York State chartered bank in an FDIC-assisted transaction. The Bank assumed \$198.3 million in customer deposits and acquired \$207.7 million in assets, including \$140.6 million in loans. The loans acquired by the Bank principally consist of commercial real estate loans. This transaction resulted in \$11.6 million of goodwill and generated \$370 thousand in core deposit intangibles.

On March 12, 2010, the Bank assumed all of the deposits, excluding brokered deposits, and borrowings, and acquired certain assets of The Park Avenue Bank, a New York State chartered bank in an FDIC-assisted transaction. The Bank assumed \$455.9 million in customer deposits and acquired \$480.5 million in assets, including \$271.8 million in loans. The loans acquired by the Bank principally consist of commercial and industrial loans, and commercial real estate loans. This transaction resulted in \$7.9 million of goodwill and generated \$1.2 million in core deposit intangibles.

The Bank and the FDIC will share in the losses on loans and real estate owned as a part of the loss-sharing agreements entered into by the Bank with the FDIC for both transactions. Under the terms of the loss-sharing agreement for the LibertyPointe Bank transaction, the FDIC is obligated to reimburse the Bank for 80 percent of any future losses on covered assets up to \$55.0 million, after the Bank absorbs such losses up to the first loss tranche of \$11.7 million, and 95 percent of losses in excess of \$55.0 million. Under the terms of the loss-sharing agreement for The Park Avenue Bank transaction, the FDIC is obligated to reimburse the Bank for 80 percent of any future losses on covered assets of up to \$66.0 million and 95 percent of losses in excess of \$66.0 million. The Bank will reimburse the FDIC for 80 percent of recoveries with respect to losses for which the FDIC paid the Bank 80 percent reimbursement under the loss-sharing agreements, and for 95 percent of recoveries with respect to losses for which the FDIC paid the Bank 95 percent reimbursement under the loss-sharing agreements.

In the event the losses under the loss-sharing agreements fail to reach expected levels, the Bank has agreed to pay to the FDIC, on approximately the tenth anniversary following the transactions closings, a cash payment pursuant to each loss-sharing agreement.

In addition, as part of the consideration for The Park Avenue Bank FDIC-assisted transaction, the Bank agreed to issue a cash-settled equity appreciation instrument to the FDIC. The equity appreciation instrument was initially recorded as a liability in the first quarter of 2010 and was settled in cash after the FDIC exercised the instrument on April 1, 2010. The valuation and settlement of the equity appreciation instrument did not significantly impact Valley's consolidated financial statements.

Note 5. New Authoritative Accounting Guidance

Accounting Standards Update (ASU) No. 2010-06, Fair Value Measurements and Disclosures (Topic 820) Improving Disclosures About Fair Value Measurements, requires new disclosures and clarifies certain existing disclosure requirements about fair value measurement. Specifically, the update requires an entity to disclose separately the amounts of significant transfers in and out of Level 1 and Level 2 fair value measurements and describe the reasons for such transfers. A reporting entity is required to present separately information about purchases, sales, issuances, and settlements in the reconciliation of fair value measurements using Level 3 inputs. In addition, the update clarifies the following requirements of the existing disclosures: (i) for the purposes of reporting fair value measurements for each class of assets and liabilities, a reporting entity needs to use judgment in determining the appropriate classes of assets; and (ii) a reporting entity is required to include disclosures about the valuation techniques and inputs used to measure fair value for both recurring and nonrecurring fair value measurements. The disclosures related to the gross presentation of purchases, sales, issuances and settlements of assets and liabilities included in Level 3 of the fair value hierarchy became effective for Valley on January 1, 2011. The other disclosure requirements and clarifications made by ASU No.

Table of Contents

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

2010-06 became effective for Valley on January 1, 2010. All of the applicable new disclosures have been included in Note 6.

ASU No. 2010-20, *Receivables (Topic 310) Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses*, requires significant new disclosures about the credit quality of financing receivables and the allowance for credit losses. The objective of these disclosures is to improve financial statement users' understanding of (i) the nature of an entity's credit risk associated with its financing receivables and (ii) the entity's assessment of that risk in estimating its allowance for credit losses as well as changes in the allowance and the reasons for those changes. The disclosures should be presented at the level of disaggregation that management uses when assessing and monitoring the portfolio's risk and performance. The required disclosures include, among other things, a rollforward of the allowance for credit losses as well as information about modified, impaired, non-accrual and past due loans and credit quality indicators. ASU No. 2010-20 became effective for Valley's financial statements as of December 31, 2010, as it relates to disclosures required as of the end of a reporting period. Disclosures that relate to activity during a reporting period generally became effective for Valley's financial statements beginning on January 1, 2011. The effective date for disclosures related to troubled debt restructurings was deferred to coincide with the July 1, 2011 effective date of the ASU No. 2011-02, *Receivables (Topic 310) A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring*, which is further discussed below. Since the provisions of ASU No. 2010-20 are only disclosure related, Valley's adoption of this guidance changed its disclosures but did not have a significant impact on its consolidated financial statements. See Notes 8 and 9 for the related disclosures.

ASU No. 2010-29, *Business Combinations (Topic 805) Disclosure of Supplementary Pro Forma Information for Business Combinations*, relates to disclosure of pro forma information for business combinations that have occurred in the current reporting period. It requires that an entity presenting comparative financial statements include revenue and earnings of the combined entity as though the combination had occurred as of the beginning of the comparable prior annual period only. This guidance is effective prospectively for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2010. The adoption of this guidance did not have an impact on Valley's consolidated financial statements.

ASU No. 2011-02, *Receivables (Topic 310) A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring*, provides clarifying guidance intended to assist creditors in determining whether a modification of the terms of a receivable meets the criteria to be considered a troubled debt restructuring, both for purposes of recording an impairment loss and for disclosure of troubled debt restructurings. In evaluating whether a restructuring constitutes a troubled debt restructuring, a creditor must separately conclude, under the guidance clarified by ASU No. 2011-02, that both of the following exist: (i) the restructuring constitutes a concession to the debtor; and (ii) the debtor is experiencing financial difficulties. ASU No. 2011-02 will be effective for Valley on July 1, 2011, and applies retrospectively to restructurings occurring on or after January 1, 2011. Valley's adoption of ASU No. 2011-02 is not expected to have a significant impact on its consolidated financial statements.

ASU No. 2011-04, *Fair Value Measurements (Topic 820) Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs*, was issued as a result of the effort to develop common fair value measurement and disclosure requirements in U.S. GAAP and International Financial Reporting Standards (IFRS). While ASU No. 2011-04 is largely consistent with existing fair value measurement principles in U.S. GAAP, it expands the existing disclosure requirements for fair value measurements and clarifies the existing guidance or wording changes to align with IFRS No. 13. Many of the requirements for the amendments in ASU No. 2011-04 do not result in a change in the application of the requirements in Topic 820. ASU No. 2011-04 will be effective for Valley for all interim and annual periods beginning after December 15, 2011. Valley's adoption of ASU No. 2011-04 is not expected to have a significant impact on its consolidated financial statements.

ASU No. 2011-05, *Comprehensive Income (Topic 220) Presentation of Comprehensive Income*, requires an entity to present components of comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. In the two-statement approach, the first statement should present total net income and its components followed consecutively by a second statement that should present total other comprehensive income, the components of other comprehensive income, and the total of comprehensive income. ASU No. 2011-05 must be applied retrospectively and is effective for Valley for all interim and annual periods beginning on or after

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

December 15, 2011. Valley's adoption of ASU No. 2011-05 is not expected to have a significant impact on its consolidated financial statements.

Note 6. Fair Value Measurement of Assets and Liabilities

ASC Topic 820, Fair Value Measurements and Disclosures, establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described below:

- Level 1 Unadjusted exchange quoted prices in active markets for identical assets or liabilities, or identical liabilities traded as assets that the reporting entity has the ability to access at the measurement date.
- Level 2 Quoted prices in markets that are not active, or inputs that are observable either directly or indirectly (i.e., quoted prices on similar assets), for substantially the full term of the asset or liability.
- Level 3 Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (i.e., supported by little or no market activity).

Assets and Liabilities Measured at Fair Value on a Recurring Basis

The following tables present the assets and liabilities that are measured at fair value on a recurring basis by level within the fair value hierarchy as reported on the consolidated statements of financial condition at June 30, 2011 and December 31, 2010. Financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement.

Net unrealized gains (losses) included in net income for the period relating to assets held at June 30 ⁽²⁾	\$ 195 ⁽³⁾	\$ (2,049) ⁽⁴⁾	\$ 431 ⁽³⁾	\$ (4,642) ⁽⁴⁾

(1) All transfers into/or out of Level 3 are assumed to occur at the beginning of the reporting period.

(2) Represents net losses that are due to changes in economic conditions and management's estimates of fair value.

(3) Included in trading (losses) gains, net within the non-interest income category on the consolidated statements of income.

(4) Represents the net impairment losses on securities recognized in earnings for the period.

During the second quarter of 2011, there were no transfers of assets into or out of Level 3. During the six months ended June 30, 2011, 21 trust preferred securities (including one pooled trust preferred security), 12 private labeled mortgage-backed securities and 4 corporate bonds classified as available-for-sale with fair values totaling \$26.7 million, \$44.8 million and \$12.9 million at January 1, 2011, respectively, were transferred out of Level 3 assets to Level 2 assets. Within the trading securities portfolio, 3 trust preferred securities with a combined fair value of \$21.9 million at January 1, 2011 were transferred out of Level 3 assets to Level 2 assets. All of the transfers were as a result of an increase in the availability of observable market data used in the securities' pricing obtained through independent pricing services or dealer market participants.

During the three and six months ended June 30, 2011 there were no transfers of assets between Level 1 and Level 2. One trust preferred security (classified as a trading security), was called for early redemption and removed from Level 1 assets during the second quarter of 2011.

The following valuation techniques were used for financial instruments measured at fair value on a recurring basis. All the valuation techniques described below apply to the unpaid principal balance excluding any accrued interest or dividends at the measurement date. Interest income and expense and dividend income are recorded within the consolidated statements of income depending on the nature of the instrument using the effective interest method based on acquired discount or premium.

Available for sale and trading securities. All U.S. Treasury securities, certain corporate and other debt securities, and certain common and preferred equity securities (including certain trust preferred securities) are reported at fair values utilizing Level 1 inputs (exchange quoted prices). The majority of the other investment securities are reported at fair value utilizing Level 2 inputs. The prices for these instruments are obtained through an independent pricing service or dealer market participants with whom Valley has historically transacted both purchases and sales of investment securities. Prices obtained from these sources include prices derived from market quotations and matrix pricing. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus prepayment speeds, credit information and the bond's terms and conditions, among other

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

things. Management reviews the data and assumptions used in pricing the securities by its third party providers to ensure the highest level of significant inputs are derived from market observable data. For certain securities, the inputs used by either dealer market participants or independent pricing service, may be derived from unobservable market information. In these instances, Valley evaluated the appropriateness and quality of each price. In addition, Valley reviewed the volume and level of activity for all available for sale and trading securities and attempted to identify transactions which may not be orderly or reflective of a significant level of activity and volume. For securities meeting these criteria, the quoted prices received from either market participants or an independent pricing service may be adjusted, as necessary, to estimate fair value and this

Table of Contents

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

results in fair values based on Level 3 inputs. In determining fair value, Valley utilized unobservable inputs which reflect Valley's own assumptions about the inputs that market participants would use in pricing each security. In developing its assertion of market participant assumptions, Valley utilized the best information that is both reasonable and available without undue cost and effort.

In calculating the fair value for the available for sale securities under Level 3 at June 30, 2011, Valley prepared present value cash flow models for two pooled trust preferred securities, and certain private label mortgage-backed securities. The cash flows for the residential mortgage-backed securities incorporated the expected cash flow of each security adjusted for default rates, loss severities and prepayments of the individual loans collateralizing the security. The cash flows for trust preferred securities reflected the contractual cash flow, adjusted if necessary for potential changes in the amount or timing of cash flows due to the underlying credit worthiness of each issuer. Valuation techniques that were used for measuring the fair value of certain available for sale and trading securities, consisting of trust preferred securities, under Level 3 at December 31, 2010 are fully described in Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

For the two available for sale pooled trust preferred securities, the resulting estimated future cash flows were discounted at a yield determined by reference to similarly structured securities for which observable orderly transactions occurred. The discount rate for each security was applied using a pricing matrix based on credit, security type and maturity characteristics to determine the fair value. The fair value calculations for both securities are received from an independent valuation advisor.

For certain available for sale private label mortgage-backed securities, cash flow assumptions incorporated independent third party market participant data based on vintage year for each security. The discount rate utilized in determining the present value of cash flows for the mortgage-backed securities was arrived at by combining the yield on orderly transactions for similar maturity government sponsored mortgage-backed securities with (i) the historical average risk premium of similar structured private label securities, (ii) a risk premium reflecting current market conditions, including liquidity risk and (iii) if applicable, a forecasted loss premium derived from the expected cash flows of each security. The estimated cash flows for each private label mortgage-backed security were then discounted at the aforementioned effective rate to determine the fair value. The quoted prices received from either market participants or independent pricing services are weighted with the internal price estimate to determine the fair value of each instrument.

Loans held for sale. The conforming residential mortgage loans originated for sale are reported at fair value using Level 2 (significant other observable) inputs. The fair values were calculated utilizing quoted prices for similar assets in active markets. To determine these fair values, the mortgages held for sale are put into multiple tranches, or pools, based on the coupon rate of each mortgage. If the mortgages held for sale are material, the market prices for each tranche are obtained from both Fannie Mae and Freddie Mac. The market prices represent a delivery price which reflects the underlying price each institution would pay Valley for an immediate sale of an aggregate pool of mortgages. The market prices received from Fannie Mae and Freddie Mac are then averaged and interpolated or extrapolated, where required, to calculate the fair value of each tranche. Depending upon the time elapsed since the origination of each loan held for sale, non-performance risk and changes therein were addressed in the estimate of fair value based upon the delinquency data provided to both Fannie Mae and Freddie Mac for market pricing and changes in market credit spreads. Non-performance risk did not materially impact the fair value of mortgage loans held for sale at June 30, 2011 and December 31, 2010 based on the short duration these assets were held, and the high credit quality of these loans.

Junior subordinated debentures issued to capital trusts. The junior subordinated debentures issued to VNB Capital Trust I are reported at fair value using Level 1 inputs. The fair value was estimated using quoted prices in active markets for similar assets, specifically the quoted price of the VNB Capital Trust I preferred stock traded under ticker symbol VLYPRA on the New York Stock Exchange. The preferred stock and Valley's junior subordinated debentures issued to the Trust have identical financial terms and therefore, the preferred stock's quoted price moves in a similar manner to the estimated fair value and current settlement price of the junior subordinated debentures. The preferred stock's quoted price includes market considerations for Valley's credit and non-performance risk and is deemed to represent the transfer price that would be used if the junior subordinated debenture were assumed by a third party. Valley's potential credit risk and changes in such risk did not materially impact the fair value measurement of the junior subordinated debentures at June 30, 2011 and December 31, 2010.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Derivatives. Derivatives are reported at fair value utilizing Level 2 inputs. The fair value of Valley's derivatives are determined using third party prices that are based on discounted cash flow analyses using observed market interest rate curves and volatilities. The fair values of the derivatives incorporate credit valuation adjustments, which consider the impact of any credit enhancements to the contracts, to account for potential nonperformance risk of Valley and its counterparties. The credit valuation adjustments were not significant to the overall valuation of Valley's derivatives at June 30, 2011 and December 31, 2010.

Assets and Liabilities Measured at Fair Value on a Non-recurring Basis

Certain financial assets and financial liabilities are measured at fair value on a nonrecurring basis; that is, the instruments are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances (for example, when there is evidence of impairment). Certain non-financial assets and non-financial liabilities are measured at fair value on a nonrecurring basis, including other real estate owned and other repossessed assets (upon initial recognition or subsequent impairment), goodwill measured at fair value in the second step of a goodwill impairment test, and loan servicing rights, core deposits, other intangible assets, and other long-lived assets measured at fair value for impairment assessment.

The following table summarizes assets measured at fair value on a non-recurring basis as of the dates indicated:

	Total	Fair Value Measurements at Reporting Date Using:		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
(in thousands)				
As of June 30, 2011				
Collateral dependent impaired loans ⁽¹⁾	\$ 57,467	\$	\$	\$ 57,467
Loan servicing rights	7,263			7,263
Foreclosed assets	9,152			9,152
As of December 31, 2010				
Collateral dependent impaired loans ⁽¹⁾	\$ 53,330	\$	\$	\$ 53,330
Loan servicing rights	11,328			11,328
Foreclosed assets	19,986			19,986

(1) Excludes pooled covered loans acquired in the FDIC-assisted transactions.

Impaired loans. Certain impaired loans are reported at the fair value of the underlying collateral if repayment is expected solely from the collateral and are commonly referred to as collateral dependent impaired loans. Collateral values are typically estimated using Level 3 inputs, consisting of individual appraisals that are significantly adjusted based on customized discounting criteria. During the six months ended June 30, 2011, collateral dependent impaired loans were individually re-measured and reported at fair value through direct loan charge-offs to the allowance for loan losses and/or a specific valuation allowance allocation based on the fair value of the underlying collateral. The direct collateral dependent loan charge-offs to the allowance for loan losses totaled \$4.3 million and \$4.6 million for the three and six months ended June 30, 2011, respectively. At June 30, 2011, collateral dependent impaired loans (mainly consisting of commercial and construction loans) with a carrying value of \$60.0 million were reduced by specific valuation allowance allocations totaling \$2.5 million to a reported fair value of

\$57.5 million.

Loan servicing rights. Fair values for each risk-stratified group are calculated using a fair value model from a third party vendor that requires inputs that are both significant to the fair value measurement and unobservable (Level 3). The fair value model is based on various assumptions, including but not limited to, servicing cost, prepayment speed, internal rate of return, ancillary income, float rate, tax rate, and inflation. A significant degree of judgment is involved in valuing the loan servicing rights using Level 3 inputs. The use of different assumptions could have a significant positive or negative effect on the fair value estimate. Impairment charges are recognized on loan servicing rights when the book value of a risk-stratified group of loan servicing rights exceeds the estimated fair value. During the three and six months

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

ended June 30, 2011, Valley recognized net recoveries of impairment charges totaling \$49 thousand and \$101 thousand, respectively, on loan servicing rights. The loan servicing rights had an \$11.7 million carrying value, net of a \$1.1 million valuation allowance, at June 30, 2011. Of the \$11.7 million loan in total servicing rights, \$7.3 million relates to impaired loan servicing rights that were recorded at their estimated fair values as of June 30, 2011.

Foreclosed assets. Certain foreclosed assets (consisting of other real estate owned and other repossessed assets), upon initial recognition and transfer from loans, are re-measured and reported at fair value through a charge-off to the allowance for loan losses based upon the fair value of the foreclosed assets. The fair value of a foreclosed asset, upon initial recognition, is typically estimated using Level 3 inputs, consisting of an appraisal that is significantly adjusted based on customized discounting criteria. During the six months ended June 30, 2011, foreclosed assets measured at fair value upon initial recognition and subsequent re-measurement totaled \$9.2 million and are included in the repossessed assets balance at June 30, 2011. In connection with the measurement and initial recognition of the aforementioned foreclosed assets, Valley recognized charge-offs to the allowance for loan losses totaling \$1.2 million and \$2.3 million for the three and six months ended June 30, 2011, respectively. The re-measurement of repossessed assets at fair value subsequent to initial recognition resulted in losses totaling \$838 thousand and \$1.3 million, which are included in non-interest expense for the three and six months ended June 30, 2011, respectively.

Other Fair Value Disclosures

The following table presents the amount of gains and losses from fair value changes included in income before income taxes for financial assets and liabilities carried at fair value for the three and six months ended June 30, 2011 and 2010:

Reported in Consolidated Statements of Financial Condition	Reported in Consolidated Statements of Income	Gains (Losses) on Change in Fair Value			
		Three Months Ended June 30,		Six Months Ended June 30,	
		2011	2010	2011	2010

ASC Topic 825, Financial Instruments, requires disclosure of the fair value of financial assets and financial liabilities, including those financial assets and financial liabilities that are not measured and reported at fair value on a recurring basis or non-recurring basis.

The fair value estimates presented in the following table were based on pertinent market data and relevant information on the financial instruments available as of the valuation date. These estimates do not reflect any premium or discount that could result from offering for sale at one time the entire portfolio of financial instruments. Because no market exists for a portion of the financial instruments, fair value estimates may be based on judgments regarding future expected loss experience, current economic conditions, risk characteristics of various financial instruments and other factors. These estimates are subjective in nature and involve uncertainties and matters of significant judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Fair value estimates are based on existing balance sheet financial instruments without attempting to estimate the value of anticipated future business and the value of assets and liabilities that are not considered financial instruments. For instance, Valley has certain fee-generating business lines (e.g., its mortgage servicing operation, trust and investment management departments) that were not considered in these estimates since these activities are not financial instruments. In addition, the tax implications related to the realization of the unrealized gains and losses can have a significant effect on fair value estimates and have not been considered in any of the estimates.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The carrying amounts and estimated fair values of financial instruments were as follows at June 30, 2011 and December 31, 2010:

	June 30, 2011		December 31, 2010

Long-term borrowings	2,727,481	3,027,188	2,933,858	3,201,090
Junior subordinated debentures issued to capital trusts (carrying amount includes fair value of \$159,787 at June 30, 2011 and \$161,734 at December 31, 2010 for VNB Capital Trust I)	184,941	185,819	186,922	187,480
Accrued interest payable	4,879	4,879	4,344	4,344
Other liabilities*	2,505	2,505	1,379	1,379

* Derivative financial instruments are included in this category.

Financial instruments with off-balance sheet risk, consisting of loan commitments and standby letters of credit, had immaterial estimated fair values at June 30, 2011 and December 31, 2010.

The following methods and assumptions were used to estimate the fair value of other financial assets and financial liabilities not measured and reported at fair value on a recurring basis or a non-recurring basis:

Cash and due from banks and interest bearing deposits with banks. The carrying amount is considered to be a reasonable estimate of fair value.

Investment securities held to maturity. Fair values are based on prices obtained through an independent pricing service or dealer market participants with which Valley has historically transacted both purchases and sales of investment securities. Prices obtained from these sources include prices derived from market quotations and matrix pricing. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus prepayment speeds, credit information and the bond's terms and conditions, among other things. For certain securities, for which the inputs used by either dealer

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

market participants or independent pricing service were derived from unobservable market information, Valley evaluated the appropriateness and quality of each price. Additionally, Valley reviewed the volume and level of activity for all classes of held to maturity securities and attempted to identify transactions which may not be orderly or reflective of a significant level of activity and volume. For securities meeting these criteria, the quoted prices received from either market participants or an independent pricing service may be adjusted, as necessary, to estimate fair value (fair values based on Level 3 inputs). If applicable, the adjustment to fair value was derived based on present

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

value cash flow model projections prepared by Valley utilizing assumptions similar to those incorporated by market participants.

Loans. Fair values of non-covered and covered loans are estimated by discounting the projected future cash flows using market discount rates that reflect the credit and interest-rate risk inherent in current loan originations. Projected future cash flows are calculated based upon contractual maturity or call dates, projected repayments and prepayments of principal. Fair values estimated in this manner do not fully incorporate an exit-price approach to fair value, but instead are based on a comparison to current market rates for comparable loans.

Accrued interest receivable and payable. The carrying amounts of accrued interest approximate their fair value.

Federal Reserve Bank and Federal Home Loan Bank stock. The redeemable carrying amount of these securities with limited marketability approximates their fair value. These securities are recorded in other assets on the consolidated statements of financial condition.

Deposits. Current carrying amounts approximate estimated fair value of demand deposits and savings accounts. The fair value of time deposits is based on the discounted value of contractual cash flows using estimated rates currently offered for alternative funding sources of similar remaining maturity.

Short-term and long-term borrowings. The fair value is estimated by obtaining quoted market prices of the identical or similar financial instruments when available. When these quoted prices are unavailable, the fair value of borrowings is estimated by discounting the estimated future cash flows using market discount rates of financial instruments with similar characteristics, terms and remaining maturity.

Junior subordinated debentures issued to GCB Capital Trust III. There is no active market for the trust preferred securities issued by GCB Capital Trust III. Therefore, the fair value is estimated utilizing the income approach, whereby the expected cash flows, over the remaining estimated life of the security, are discounted using Valley's credit spread over the current yield on a similar maturity U.S. Treasury security. Valley's credit spread was calculated based on Valley's trust preferred securities issued by VNB Capital Trust I, which are publicly traded in an active market.

Note 7. Investment Securities

As of June 30, 2011, Valley had approximately \$2.0 billion, \$863.2 million, and \$22.1 million in held to maturity, available for sale, and trading investment securities, respectively. Valley may be required to record impairment charges on its investment securities if they suffer a decline in value that is considered other-than-temporary. Numerous factors, including lack of liquidity for re-sales of certain investment securities, absence of reliable pricing information for investment securities, adverse changes in business climate, adverse actions by regulators, or unanticipated changes in the competitive environment could have a negative effect on Valley's investment portfolio and may result in other-than-temporary impairment on certain investment securities in future periods. Valley's investment portfolios include private label mortgage-backed securities, trust preferred securities principally issued by bank holding companies (referred to below as bank issuers) (including three pooled trust preferred securities), corporate bonds primarily issued by banks, and perpetual preferred and common equity securities issued by banks. These investments may pose a higher risk of future impairment charges by Valley as a result of the persistently weak U.S. economy and its potential negative effect on the future performance of these bank issuers and/or the underlying mortgage loan collateral.

The unrealized losses on investment securities held to maturity are primarily due to changes in interest rates (including, in certain cases, changes in credit spreads) and lack of liquidity in the marketplace. The total number of security

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

positions in the securities held to maturity portfolio in an unrealized loss position at June 30, 2011 was 61 as compared to 153 at December 31, 2010.

At June 30, 2011, the unrealized losses reported for trust preferred securities relate to 15 single-issuer securities, mainly issued by bank holding companies. Of the 15 trust preferred securities, 7 were investment grade, 1 was non-investment grade, and 7 were not rated. Additionally, \$40.0 million of the \$57.3 million in unrealized losses in the trust preferred securities portfolio at June 30, 2011, relate to securities issued by one bank holding company with a combined amortized cost of \$55.0 million. Valley privately negotiated the purchase of the \$55.0 million in trust preferred securities from the bank issuer and holds all of the securities of the two issuances. Typical of most trust preferred issuances, the bank issuer may defer interest payments for up to five years with interest payable on the deferred balance. In August and October of 2009, the bank issuer was required to defer its scheduled interest payments on each respective security issuance based upon an operating agreement with its bank regulators. The operating agreement with its bank regulators requires, among other things, the issuer to receive permission from the regulators prior to resuming its regularly scheduled interest payments on both security issuances. From the dates of deferral up to and including its most recent regulatory filing, the bank issuer continued to accrue and capitalize the interest owed, but not remitted to its trust preferred security holders, and at the holding company level it reported cash and cash equivalents in excess of the cumulative amount of accrued but unpaid interest owed on all of its junior subordinated debentures related to trust preferred securities.

In assessing whether a credit loss exists for the securities of the deferring bank issuer, Valley considers numerous factors, including, but not limited to, such factors highlighted in the Other-Than-Temporary Impairment Analysis section below. Specific to these securities, Valley's conclusions were derived based on a thorough review of the deferring bank issuer's financial condition, coupled with an analysis of external conditions which may adversely impact the issuer's future ability to repay all of the principal and interest owed to Valley. The bank issuer's principal subsidiary bank reported, in its regulatory filings, that it meets the regulatory capital minimum requirements to be considered a well-capitalized institution as of June 30, 2011 and December 31, 2010. The issuer's bank subsidiary has consistently met the minimum well-capitalized requirements each quarter since the date of the interest deferral on both issuances. During the deferral period, the bank issuer also reported that it raised new common capital and increased all of its bank regulatory risk ratios by over 20 percent at December 31, 2010 and nearly 40 percent at June 30, 2011. The bank issuer's financial condition at June 30, 2011 and December 31, 2010 improved from the dates of deferral as the issuer has implemented many strategies to reduce credit exposure, such as deleveraging its balance sheet of higher risk assets and liquidating certain non-performing assets. Reported net income at the deferring bank issuer was positive for the year ended December 31, 2010 and was higher than all of 2010 for the six months ended June 30, 2011. Additionally when determining whether a credit loss impairment exists, Valley assesses the bank issuer's deferral of regularly scheduled interest and principal payments and the likely time period until the issuer will be allowed to resume such payments. Valley's assessment includes, but is not limited to, a review of the bank issuer's operating agreement with its bank regulators and the mandatory requirements outlined in such agreement. The bank issuer reported that it substantially complied with the terms of the agreement within the notes to its audited 2010 and 2009 financial statements issued in March 2011 and December 2010, respectively. Valley has also reviewed a plan presented by the bank issuer's management to their shareholders and the issuer's subsequent performance each quarter-end in relation to the milestones outlined in the plan. The bank issuer's ability to stay on target in improving its financial performance, enhancing its capital and stabilizing the credit quality of its loans were additional factors Valley considered when assessing the bank issuer's deferral of scheduled interest payments each quarter. Another variable Valley assesses in determining other-than-temporary impairment is whether the fair value of the bank issuer's security has been less than its amortized cost for an extended period of time. The estimated fair value of the trust preferred securities is, in part, negatively impacted by the bank regulators' mandate for the bank issuer to defer quarterly scheduled interest payments. In calculating the fair value of these instruments, Valley relied on the assumptions used in calculating the discount rate used to discount future expected cash flows. In Valley's analysis, the discount rate is comprised of both a base rate and credit rate calculation. The base rate, which was obtained from independent third parties, is largely tied to market factors such as liquidity and market interest rate expectations. The credit rate calculation is primarily a function of the credit risk assessment resulting from Valley's impairment analysis. The fair value of the trust preferred securities of the deferring bank issuer was approximately \$40.0 million less than their amortized cost at June 30, 2011 as compared to \$36.0 million below their amortized cost at September 30, 2009 (the quarterly reporting date nearest to the two deferral dates). The volatility in fair value from the date the issuer deferred is in large part due to fluctuations in general market conditions which impacted the illiquidity premium and aggregate levels of interest rates. The credit spread assigned to the issuer in Valley's fair value estimate for the trust preferred securities has remained consistent from the deferral dates. Additionally, the duration of time in which the estimated fair value of the instruments has been less than amortized cost is largely due to the deferral of scheduled interest payments and an increase in credit rate assigned to the issuer from the date of the securities' issuance, coupled with a decrease in liquidity. Valley

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

assesses the duration in which the securities' fair value has been less than amortized cost in estimating each security's future cash flows each quarter. However, Valley believes a greater weighting towards the issuer's financial condition within its OTTI analysis and estimation of future cash flows is warranted due to the expected duration of the issuer's regulatory agreement and its impact on the length of time the trust preferred securities' estimated fair value will be below their amortized cost.

Based on the available deferring bank issuer information and Valley's assessment of the expected duration of the deferral period, Valley believes that it will receive all principal and interest contractually due on both security issuances, and as such has concluded no credit impairment exists at June 30, 2011. Valley continues to closely monitor the credit risk of this issuer. Valley may be required to recognize other-than-temporary impairment charges on the trust preferred securities in future periods. On a go-forward basis, changes in several factors considered in Valley's other-than-temporary impairment analysis, including adverse developments regarding the bank issuer's financial condition or its agreement with the bank regulators, may require the recognition of credit impairment charges on these securities in earnings. Valley does not view each factor in isolation, but rather analyzes the collective impact of such factors on the bank issuer at the end of each reporting period. In Valley's credit loss analysis, prevailing significance is placed on the issuer's financial condition and its capital position. Additionally, the terms and conditions of the issuer's regulatory agreement, changes to the regulatory agreement and the issuer's dialogue with the banking regulators are important variables used in Valley's assessment of whether a credit loss exists. For example, a significant decline in the issuer's capital position or a material adverse development in its agreement with the regulators would cause Valley to incur an impairment charge in such period. The impairment charge may be part or all of the combined amortized cost of the securities totaling \$55.0 million and in any such event could also cause a reversal of interest accrued, but unpaid from the date of deferral on the securities. See the Other-than-Temporary Impairment Analysis section below for further details regarding the factors assessed in Valley's impairment analysis.

All other single-issuer bank trust preferred securities classified as held to maturity are paying in accordance with their terms, have no deferrals of interest or defaults and, if applicable, meet the regulatory capital requirements to be considered to be well-capitalized institutions at June 30, 2011.

Management does not believe that any individual unrealized loss as of June 30, 2011 included in the table above represents other-than-temporary impairment as management mainly attributes the declines in value to changes in interest rates, widening credit spreads, and lack of liquidity in the market place, not credit quality or other factors. Based on a comparison of the present value of expected cash flows to the amortized cost, management believes there are no credit losses on these securities. Valley does not have the intent to sell, nor is it more likely than not that Valley will be required to sell, the securities contained in the table above before the recovery of their amortized cost basis or maturity.

As of June 30, 2011, the fair value of investments held to maturity that were pledged to secure public deposits, repurchase agreements, lines of credit, and for other purposes required by law, was \$994 million.

The contractual maturities of investments in debt securities held to maturity at June 30, 2011 are set forth in the table below. Maturities may differ from contractual maturities in residential mortgage-backed securities because the mortgages underlying the securities may be prepaid without any penalties. Therefore, residential mortgage-backed securities are not included in the maturity categories in the following summary.

	June 30, 2011	
	Amortized Cost	Fair Value
	(in thousands)	
Due in one year	\$ 130,602	\$ 130,815
Due after one year through five years	56,043	58,058
Due after five years through ten years	168,915	176,171
Due after ten years	462,317	410,099
Residential mortgage-backed securities	1,184,773	1,227,216
 Total investment securities held to maturity	 \$ 2,002,650	 \$ 2,002,359

Actual maturities of debt securities may differ from those presented above since certain obligations provide the issuer the right to call or prepay the obligation prior to scheduled maturity without penalty.

The weighted-average remaining expected life for residential mortgage-backed securities held to maturity was 6.6 years at June 30, 2011.

As of June 30, 2011, the fair value of securities available for sale that were pledged to secure public deposits, repurchase agreements, lines of credit, and for other purposes required by law, was \$498 million.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The contractual maturities of investment securities available for sale at June 30, 2011, are set forth in the following table. Maturities may differ from contractual maturities in residential mortgage-backed securities because the mortgages underlying the securities may be prepaid without any penalties. Therefore, residential mortgage-backed securities are not included in the maturity categories in the following summary.

	June 30, 2011	
	Amortized Cost	Fair Value
	(in thousands)	
Due in one year	\$ 105,767	\$ 105,934
Due after one year through five years	2,912	2,996
Due after five years through ten years	88,301	90,035
Due after ten years	106,678	98,651
Residential mortgage-backed securities	494,815	514,398
Equity securities	47,924	51,182
Total investment securities available for sale	\$ 846,397	\$ 863,196

Actual maturities of debt securities may differ from those presented above since certain obligations provide the issuer the right to call or prepay the obligation prior to scheduled maturity without penalty.

The weighted-average remaining expected life for residential mortgage-backed securities available for sale at June 30, 2011 was 4.5 years.

Other-Than-Temporary Impairment Analysis

To determine whether a security's impairment is other-than-temporary, Valley considers several factors that include, but are not limited to the following:

- The severity and duration of the decline, including the causes of the decline in fair value, such as credit problems, interest rate fluctuations, or market volatility;
- Adverse conditions specifically related to the security, an industry, or geographic area;
- Failure of the issuer of the security to make scheduled interest or principal payments;
- Any changes to the rating of the security by a rating agency or, if applicable, any regulatory actions impacting the security issuer;
- Recoveries or additional declines in fair value after the balance sheet date;
- Our ability and intent to hold equity security investments until they recover in value, as well as the likelihood of such a recovery in the near term; and
- Our intent to sell debt security investments, or if it is more likely than not that we will be required to sell such securities before recovery of their individual amortized cost basis.

For debt securities, the primary consideration in determining whether impairment is other-than-temporary is whether or not we expect to collect all contractual cash flows.

In assessing the level of other-than-temporary impairment attributable to credit loss for debt securities, Valley compares the present value of cash flows expected to be collected with the amortized cost basis of the security. The portion of the total other-than-temporary impairment related to credit loss is recognized in earnings, while the amount related to other factors is recognized in other comprehensive income. The total

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

other-than-temporary impairment loss is presented in the consolidated statements of income, less the portion recognized in other comprehensive income. Subsequent assessments may result in additional estimated credit losses on previously impaired securities. These additional estimated credit losses are recorded as reclassifications from the portion of other-than-temporary impairment previously recognized in other comprehensive income to earnings in the period of such assessments. The amortized cost basis of an impaired debt security is reduced by the portion of the total impairment related to credit loss.

For residential mortgage-backed securities, Valley estimates loss projections for each security by stressing the cash flows from the individual loans collateralizing the security using expected default rates, loss severities, and prepayment speeds, in conjunction with the underlying credit enhancement (if applicable) for each security. Based on collateral and origination vintage specific assumptions, a range of possible cash flows was identified to determine whether other-than-temporary impairment existed at June 30, 2011.

For the single-issuer trust preferred securities and corporate and other debt securities, Valley reviews each portfolio to determine if all the securities are paying in accordance with their terms and have no deferrals of interest or defaults. Over the past several years, many banking institutions have been required to defer trust preferred payments and a growing number of banking institutions have been put in receivership by the FDIC. A deferral event by a bank holding company for which we hold trust preferred securities may require us to recognize an other-than-temporary impairment charge if we determine that the probability is likely that Valley will not collect all contractual interest and principal. In assessing the probability of default by an issuer, Valley views the time period the issuer is in deferral in conjunction with the facts and circumstances attributable to each issuer. A FDIC receivership for any single-issuer would result in an impairment and significant loss. Valley analyzes the performance of the issuers on a quarterly basis, including a review of performance data from the issuer's most recent bank regulatory report, if applicable, to assess their credit risk and the probability of impairment of the contractual cash flows of the applicable security. Based upon management's quarterly review, all of the issuers' capital ratios are at or above the minimum amounts to be considered a well-capitalized financial institution, if applicable, and/or have maintained performance levels adequate to support the contractual cash flows.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

For the three pooled trust preferred securities, Valley evaluates the projected cash flows from each of its tranches in the three securities to determine if they are adequate to support their future contractual principal and interest payments. Valley assesses the credit risk and probability of impairment of the contractual cash flows by projecting the default rates over the life of the security. Higher projected default rates will decrease the expected future cash flows from each security. If the projected decrease in cash flows in each tranche causes a change in contractual yield, the security would be considered to be other-than-temporarily impaired. Two of the pooled trust preferred securities were initially impaired in 2008 with additional estimated credit losses recognized during 2009 and the first quarter of 2010. One of the two pooled trust preferred securities had additional estimated credit losses recognized during the first quarter of 2011. See Other-Than-Temporarily Impaired Securities section below for further details.

The perpetual preferred securities, reported in equity securities, are hybrid investments that are assessed for impairment by Valley as if they were debt securities. Therefore, Valley assessed the creditworthiness of each security issuer, as well as any potential change in the anticipated cash flows of the securities as of June 30, 2011. Based on this analysis, management believes the declines in fair value of these securities are attributable to a lack of liquidity in the marketplace and are not reflective of any deterioration in the creditworthiness of the issuers.

Other-Than-Temporarily Impaired Securities

The following table provides information regarding our other-than-temporary impairment charges on securities recognized in earnings for the three and six months ended June 30, 2011 and 2010.

	Three Months		Six Months	
	Ended	Ended	Ended	Ended
	June 30,	June 30,	June 30,	June 30,
	2011	2010	2011	2010
	(in thousands)			
Available for sale:				
Residential mortgage-backed securities	\$	\$ 2,049	\$	\$ 2,265
Trust preferred securities			825	2,377
Net impairment losses on securities recognized in earnings	\$	\$ 2,049	\$ 825	\$ 4,642

There were no net impairment losses on securities recognized in earnings during the second quarter of 2011 compared to \$2.0 million for the same period in 2010. During the second quarter of 2010, Valley recognized additional estimated credit losses on three previously impaired private label mortgage-backed securities.

For the six months ended June 30, 2011, Valley recognized net impairment losses on securities in earnings totaling \$825 thousand due to additional estimated credit losses on one of the two previously impaired pooled trust preferred securities. For the six months ended June 30, 2010, Valley recognized impairment charges on a total of five individual private label mortgage-backed securities and two previously impaired pooled trust preferred securities.

At June 30, 2011, the five previously impaired private label mortgage-backed securities had a combined amortized cost of \$47.0 million and fair value of \$47.2 million, while the two previously impaired pooled trust preferred securities had a combined amortized cost and fair value of \$5.4 million and \$4.1 million, respectively, after recognition of all credit impairments.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)****Realized Gains and Losses**

Gross gains (losses) realized on sales, maturities and other securities transactions related to investment securities included in earnings for the three and six months ended June 30, 2011 and 2010 were as follows:

	Three Months Ended June 30, 2011		Six Months Ended June 30, 2010	
	(in thousands)			
Sales transactions:				
Gross gains	\$ 16,294	\$ 3,752	\$ 18,968	\$ 4,634
Gross losses		(81)		(96)
	\$ 16,294	\$ 3,671	\$ 18,968	\$ 4,538
Maturities and other securities transactions:				
Gross gains	\$ 198	\$ 40	\$ 208	\$ 52
Gross losses		(55)	(5)	(71)
	\$ 198	\$ (15)	\$ 203	\$ (19)
Total gains on securities transactions, net	\$ 16,492	\$ 3,656	\$ 19,171	\$ 4,519

During the quarter ended June 30, 2011, Valley recognized gross gains on sales transactions of \$16.3 mainly due to the sale of \$253.0 million in residential mortgage-backed securities issued by government sponsored agencies, perpetual preferred securities issued by Freddie Mac and Fannie Mae, and U.S Treasury securities that were classified as available for sale. Of these sales, \$141.2 million in net proceeds were recorded as an unsettled trade date receivable included in other assets at June 30, 2011.

The following table presents the changes in the credit loss component of cumulative other-than-temporary impairment losses on debt securities classified as either held to maturity or available for sale that Valley has recognized in earnings, for which a portion of the impairment loss (non-credit factors) was recognized in other comprehensive income for the three and six months ended June 30, 2011 and 2010:

	Three Months Ended June 30, 2011		Six Months Ended June 30, 2010	
	(in thousands)			
Balance, beginning of period	\$ 11,169	\$ 8,664	\$ 10,500	\$ 6,119
Additions:				
Initial credit impairments				124
Subsequent credit impairments		2,049	825	4,518
Reductions:				

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Accretion of credit loss impairment due to an increase in expected cash flows	(93)	(53)	(249)	(101)
Balance, end of period	\$ 11,076	\$ 10,660	\$ 11,076	\$ 10,660

The credit loss component of the impairment loss represents the difference between the present value of expected future cash flows and the amortized cost basis of the security prior to considering credit losses. The beginning balance represents the credit loss component for debt securities for which other-than-temporary impairment occurred prior to the periods presented. Other-than-temporary impairments recognized in earnings for credit impaired debt securities are presented as additions in two components based upon whether the current period is the first time the debt security was credit impaired (initial credit impairment) or is not the first time the debt security was credit impaired (subsequent credit impairment). The credit loss component is reduced if Valley sells, intends to sell or believes it will be required to sell previously credit impaired debt securities. Additionally, the credit loss component is reduced if (i) Valley receives cash flows in excess of what it expected to receive over the remaining life of the credit impaired debt security, (ii) the security matures or (iii) the security is fully written down.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)****Trading Securities**

The fair value of trading securities (consisting of 3 and 4 single-issuer bank trust preferred securities at June 30, 2011 and December 31, 2010, respectively) was \$22.1 million and \$31.9 million at June 30, 2011 and December 31, 2010, respectively. Interest income on trading securities totaled \$500 thousand and \$642 thousand for the three months ended June 30, 2011 and 2010, respectively, and \$1.1 million and \$1.3 million for the six months ended June 30, 2011 and 2010, respectively.

Note 8. Loans

The detail of the loan portfolio as of June 30, 2011 and December 31, 2010 was as follows:

	June 30, 2011	December 31, 2010
	(in thousands)	
Non-covered loans:		
Commercial and industrial	\$ 1,825,782	\$ 1,825,066
Commercial real estate:		
Commercial real estate	3,486,597	3,378,252
Construction	413,951	428,232

Total loans	\$ 9,591,023	\$ 9,365,795

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

FDIC under loss-share receivable related to covered loans and foreclosed assets	\$	80,179	\$	89,359
---------------------------------------------------------------------------------	----	--------	----	--------

Total non-covered loans are net of unearned discount and deferred loan fees totaling \$7.7 million and \$9.3 million at June 30, 2011 and December 31, 2010, respectively. Covered loans had outstanding contractual principal balances totaling approximately \$447.2 million and \$497.0 million at June 30, 2011 and December 31, 2010, respectively.

Covered Loans

Covered loans acquired through the FDIC-assisted transactions are accounted for in accordance with ASC Subtopic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality, since all of these loans were acquired at a discount attributable, at least in part, to credit quality and are not subsequently accounted for at fair value. Covered loans were initially recorded at fair value (as determined by the present value of expected future cash flows) with no valuation allowance (i.e., the allowance for loan losses). Under ASC Subtopic 310-30, loans may be aggregated and accounted for as pools of loans if the loans being aggregated have common risk characteristics. The difference between the undiscounted cash flows expected at acquisition and the investment in the covered loans, or the accretable yield, is recognized as interest income utilizing the level-yield method over the life of each pool. Contractually required payments for interest and principal that exceed the undiscounted cash flows expected at acquisition, or the non-accretable difference, are not recognized as a yield adjustment, as a loss accrual or a valuation allowance. Increases in

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

expected cash flows subsequent to the acquisition are recognized prospectively through an adjustment of the yield on the pool over its remaining life, while decreases in expected cash flows are recognized as impairment through a loss provision and an increase in the allowance for loan losses. Valuation allowances (recognized in the allowance for loan losses) on these impaired pools reflect only losses incurred after the acquisition (representing all cash flows that were expected at acquisition but currently are not expected to be received). The allowance for loan losses on covered loans (acquired through two FDIC-assisted transactions) is determined without consideration of the amounts recoverable through the FDIC loss-share agreements (see *FDIC loss-share receivable* below).

The Bank periodically evaluates the remaining contractual required payments due and estimates of cash flows expected to be collected. These evaluations, performed quarterly, require the continued use of key assumptions and estimates, similar to the initial estimate of fair value. Changes in the contractual required payments due and estimated cash flows expected to be collected may result in changes in the accretible yield and non-accretible difference or reclassifications between accretible yield and the non-accretible difference. During the quarter ended June 30, 2011, on an aggregate basis the acquired pools of covered loans performed better than originally expected, and based on our current estimates, we expect to receive more future cash flows than originally modeled at the acquisition dates. For these pools with better than expected cash flows, the forecasted increase is recorded as an additional accretible yield that is recognized as a prospective increase to our interest income on loans. Additionally, the FDIC loss-share receivable is prospectively reduced by the guaranteed portion of the additional amount expected to be received with a corresponding reduction to non-interest income.

Changes in the accretible yield for covered loans were as follows for the three and six months ended June 30, 2011:

	Three Months Ended June 30, 2011	Six Months Ended June 30, 2011
	(in thousands)	
Balance at the beginning of the period	\$ 109,435	\$ 101,052
Accretion	(8,706)	(16,518)
Net reclassification from non-accretible difference	788	16,983
Balance at the end of the period	\$ 101,517	\$ 101,517

Valley reclassified \$788 thousand and \$17.0 million from the non-accretible difference for covered loans because of increases in expected cash flows for certain pools of covered loans during the three and six months ended June 30, 2011, respectively. This amount will be recognized prospectively as an adjustment to yield over the life of the individual pools.

FDIC Loss-Share Receivable

The receivable arising from the loss-sharing agreements (referred to as the *FDIC loss-share receivable* on our consolidated statements of financial condition) is measured separately from the covered loan portfolio because the agreements are not contractually part of the covered loans and are not transferable should the Bank choose to dispose of the covered loans.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Changes in the FDIC loss-share receivable for the six months ended June 30, 2011 were as follows:

	(in thousands)
Balance at December 31, 2010	\$ 89,359
Accretion, net*	(4,987)
Increase due to impairment on covered loans*	16,932
Other reimbursable expenses*	1,621
Reimbursements from the FDIC	(22,746)
Balance at June 30, 2011	\$ 80,179

* Valley recognized \$13.6 million in non-interest income for the six months ended June 30, 2011 representing the net effect on the FDIC loss-share receivable of additions for reimbursable expenses and impairment of certain covered loan pools, less a reduction for net accretion.

Loan Portfolio Risk Elements and Credit Risk Management

Credit risk management. For all of its loan types discussed below, Valley adheres to a credit policy designed to minimize credit risk while generating the maximum income given the level of risk. Management reviews and approves these policies and procedures on a regular basis with subsequent approval by the Board of Directors annually. Credit authority relating to a significant dollar percentage of the overall portfolio is centralized and controlled by the Credit Risk Management Division and by the Credit Committee. A reporting system supplements the management review process by providing management with frequent reports concerning loan production, loan quality, concentrations of credit, loan delinquencies, non-performing, and potential problem loans. Loan portfolio diversification is an important factor utilized by Valley to manage its risk across business sectors and through cyclical economic circumstances.

Commercial and industrial loans. A significant proportion of Valley's commercial and industrial loan portfolio is granted to long standing customers of proven ability, strong repayment performance, and high character. Underwriting standards are designed to assess the borrower's ability to generate recurring cash flow sufficient to meet the debt service requirements of loans granted. While such recurring cash flow serves as the primary source of repayment, a significant number of the loans are collateralized by borrower assets intended to serve as a secondary source of repayment should the need arise. Anticipated cash flows of borrowers, however, may not be as expected and the collateral securing these loans may fluctuate in value, or in the case of loans secured by accounts receivable, the ability of the borrower to collect all amounts due from its customers. Short-term loans may be made on an unsecured basis based on a borrower's financial strength and past performance. Valley, in most cases, will obtain the personal guarantee of the borrower's principals to mitigate the risk. Unsecured loans, when made, are generally granted to the Bank's most credit worthy borrowers. At June 30, 2011, unsecured commercial and industrial loans totaled \$385.7 million.

Commercial real estate loans. Commercial real estate loans are subject to underwriting standards and processes similar to commercial and industrial loans. Commercial real estate loans are viewed primarily as cash flow loans and secondarily as loans secured by real property. Loans generally involve larger principal balances and longer repayment periods as compared to commercial and industrial loans. Repayment of most loans is dependent upon the cash flow generated from the property securing the loan or the business that occupies the property. Commercial real estate loans may be more adversely affected by conditions in the real estate markets or in the general economy and accordingly conservative loan to value ratios are required at origination, as well as, stress tested to evaluate the impact of market changes relating to key underwriting elements. The properties securing the commercial real estate portfolio represent diverse types, with most properties located within Valley's primary markets.

Construction loans. With respect to loans to developers and builders, Valley originates and manages construction loans structured on either a revolving or non-revolving basis, depending on the nature of the underlying development project. These loans are generally secured by the real estate to be developed and may also be secured by additional real estate to mitigate the risk. Non-revolving construction loans often involve the disbursement of substantially all committed funds with repayment substantially dependent on the successful completion and sale, or lease, of the project. Sources of repayment for these types of loans may be from pre-committed permanent loans from other lenders, sales of developed

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

property, or an interim loan commitment from Valley until permanent financing is obtained elsewhere. Revolving construction loans (generally relating to single family residential construction) are controlled with loan advances dependent upon the presale of housing units financed. These loans are closely monitored by on-site inspections and are considered to have higher risks than other real estate loans due to their ultimate repayment being sensitive to interest rate changes, governmental regulation of real property, general economic conditions and the availability of long-term financing.

Residential mortgages. Valley originates residential, first mortgage loans based on underwriting standards that comply with Fannie Mae and/or Freddie Mac requirements. Appraisals of real estate collateral are contracted directly with independent appraisers and not through appraisal management companies. The Bank's appraisal management policy and procedure is in accordance with regulatory requirements and guidance issued by the Bank's primary regulator. Credit scoring, using FICO[®] and other proprietary, credit scoring models, is employed in the ultimate, judgmental credit decision by Valley's underwriting staff. Valley does not use third party contract underwriting services. Residential mortgage loans include fixed and variable interest rate loans secured by one to four family homes generally located in northern and central New Jersey, New York City metropolitan area, and eastern Pennsylvania. Valley's ability to be repaid on such loans is closely linked to the economic and real estate market conditions in this region. In deciding whether to originate each residential mortgage, Valley considers the qualifications of the borrower as well as the value of the underlying property.

Home equity loans. Home equity lending consists of both fixed and variable interest rate products. Valley mainly provides home equity loans to its residential mortgage customers within the footprint of its primary lending territory. Valley generally will not exceed a combined (i.e., first and second mortgage) loan-to-value ratio of 70 percent when originating a home equity loan.

Automobile loans. Valley uses both judgmental and scoring systems in the credit decision process for automobile loans. Automobile originations (including light truck and sport utility vehicles) are largely produced via indirect channels, originated through approved automobile dealers. Automotive collateral is generally a depreciating asset and there are times in the life of an automobile loan where the amount owed on a vehicle may exceed its collateral value. Additionally, automobile charge-offs will vary based on strength or weakness in the used vehicle market, original advance rate, when in the life cycle of a loan a default occurs and the condition of the collateral being liquidated. Where permitted by law, and subject to the limitations of the bankruptcy code, deficiency judgments are sought and acted upon to ultimately collect all money owed, even when a default resulted in a loss at collateral liquidation. Valley uses a third party to actively track collision and comprehensive risk insurance required of the borrower on the automobile and this third party provides coverage to Valley in the event of an uninsured collateral loss.

Other consumer loans. Valley's other consumer loan portfolio includes direct consumer term loans, both secured and unsecured. The other consumer loan portfolio includes minor exposures in credit card loans, personal lines of credit, personal loans and loans secured by cash surrender value of life insurance. Valley believes the aggregate risk exposure of these loans and lines of credit was not significant at June 30, 2011. At June 30, 2011, unsecured consumer loans totaled approximately \$41.3 million, including \$9.0 million of credit card loans.

Credit Quality

Past due and non-accrual loans. All loans are deemed to be past due when the contractually required principal and interest payments have not been received as they become due. Loans are placed on non-accrual status generally when they become 90 days past due and the full and timely collection of principal and interest becomes uncertain. When a loan is placed on non-accrual status, interest accruals cease and uncollected accrued interest is reversed and charged against current income. Payments received on nonaccrual loans are applied against principal. A loan may be restored to an accruing basis when it becomes well secured and is in the process of collection, or all past due amounts become current under the loan agreement and collectability is no longer doubtful.

The covered loans acquired from the FDIC were aggregated into pools based on common risk characteristics in accordance with ASC Subtopic 310-30. Each loan pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. The covered loans that may have been classified as non-performing loans by the acquired banks are no longer classified as non-performing because these loans are accounted for an a

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

pooled basis. Management's judgment is required in classifying loans in pools subject to ASC Subtopic 310-30 as performing loans, and is dependent on having a reasonable expectation about the timing and amount of the pool cash flows to be collected, even if certain loans within the pool are contractually past due.

The following tables present past due, non-accrual and current non-covered loans by loan portfolio class at June 30, 2011 and December 31, 2010:

* Past due loans and non-accrual loans exclude loans that were acquired as part of the Liberty Pointe Bank and The Park Avenue Bank FDIC-assisted transactions. These loans are accounted for on a pooled basis.

Performing troubled debt restructured loans (restructured loans). Restructured loans within the non-covered loan portfolio with modified terms and not reported as loans 90 days or more past due and still accruing or as non-accrual loans, are performing restructured loans to customers experiencing financial difficulties where a concession has been granted. All loan modifications are made on a case-by-case basis. Substantially all of our loan modifications that are considered restructured loans involve lowering the monthly payments on such loans through either a reduction in interest rate below a market rate, an extension of the term of the loan without a corresponding adjustment to the risk premium reflected in the interest rate, or a combination of these two methods. These modifications rarely result in the

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

forgiveness of principal or interest. In addition, the Bank frequently obtains additional collateral or guarantor support when modifying such loans.

The following table presents information about restructured loans within the non-covered loan portfolio at June 30, 2011 and December 31, 2010:

	June 30, 2011		December 31, 2010

Total restructured loans	\$ 101,444	50	\$ 89,696	44

Impaired loans. Non-accrual commercial and industrial loans and commercial real estate loans over \$250 thousand and all troubled debt restructured loans are individually evaluated for impairment. The value of an impaired loan is measured based upon the underlying anticipated method of payment consisting of either the present value of expected future cash flows discounted at the loan's effective interest rate, or the fair value of the collateral, if the loan is collateral dependent, and its payment is expected solely based on the underlying collateral. If the value of an impaired loan is less than its carrying amount, impairment is recognized through a provision to the allowance for loan losses. Collateral dependent impaired loan balances are written down to the current fair value of each loan's underlying collateral resulting in an immediate charge-off to the allowance, excluding any consideration for personal guarantees that may be pursued in the Bank's collection process. If repayment is based upon future expected cash flows, the present value of the expected future cash flows discounted at the loan's original effective interest rate is compared to the carrying value of the loan, and any shortfall is recorded as a specific valuation allowance in the allowance for credit losses. Accrual of interest is discontinued on an impaired loan when management believes, after considering collection efforts and other factors, the borrower's financial condition is such that collection of interest is doubtful. Cash collections on impaired loans are generally credited to the loan balance, and no interest income is recognized on these loans until the principal balance has been determined to be fully collectible.

Residential mortgage loans and consumer loans generally consist of smaller balance homogeneous loans that are collectively evaluated for impairment, and are specifically excluded from the impaired loan portfolio, except where the loan is classified as a troubled debt restructured loan.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The following tables present the information about non-covered impaired loans by loan portfolio class at June 30, 2011 and December 31, 2010:

Credit quality indicators. Valley utilizes an internal loan classification system as a means of reporting problem loans within commercial and industrial, commercial real estate, and construction loan portfolio classes. Under Valley's internal risk rating system, loan relationships could be classified as Special Mention, Substandard, Doubtful, and Loss. Substandard loans include loans that exhibit well-defined weaknesses and are characterized by the distinct possibility that we will sustain some loss if the deficiencies are not corrected. Loans classified as Doubtful have all the weaknesses inherent in those classified Substandard with the added characteristic that the weaknesses present make collection or liquidation in full, based on currently existing facts, conditions and values, highly questionable and improbable. Loans classified as Loss are those considered uncollectible with insignificant value and are charged-off immediately to the allowance for loan losses. Loans that do not currently pose a sufficient risk to warrant classification in one of the aforementioned categories, but pose weaknesses that deserve management's close attention are deemed to be Special Mention. Loans rated as Pass loans do not currently pose any identified risk and can range from the highest to average quality, depending on the degree of potential risk. Risk ratings are updated any time the situation warrants.

The following table presents the risk category of loans by class of loans based on the most recent analysis performed at June 30, 2011 and December 31, 2010.

Credit exposure - by internally assigned risk rating	Pass	Special Mention	Substandard (in thousands)	Doubtful	Total
June 30, 2011					
Commercial and industrial	\$ 1,628,838	\$ 89,924	\$ 106,717	\$ 303	\$ 1,825,782

Valley evaluates the credit quality of its covered loan pools based on the expectation of the underlying cash flows. The balance of covered loan pools with an adverse change in the expected cash flows since the date of acquisition was

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

\$175.5 million and \$27.2 million at June 30, 2011 and December 31, 2010, respectively. The impaired loan pools mainly consisted of commercial and industrial loans.

Note 9. Allowance for Credit Losses

The allowance for credit losses consists of the allowance for losses on non-covered loans, the reserve for unfunded letters of credit, and the allowance for losses on covered loans related to credit impairment of certain covered loan pools subsequent to acquisition. Management maintains the allowance for credit losses at a level estimated to absorb probable loan losses of the loan portfolio and unfunded letter of credit commitments at the balance sheet date. The allowance for losses on non-covered loans is based on ongoing evaluations of the probable estimated losses inherent in the non-covered loan portfolio.

The following table summarizes the allowance for credit losses at June 30, 2011 and December 31, 2010:

	June 30, 2011	December 31, 2010
	(in thousands)	
Components of allowance for credit losses:		
Allowance for non-covered loans	\$ 119,907	\$ 118,326
Allowance for covered loans	18,719	6,378
 Total allowance for loan losses	 138,626	 124,704
 Allowance for unfunded letters of credit	 2,267	 1,800
 Total allowance for credit losses	 \$ 140,893	 \$ 126,504

The following table summarizes the provision for credit losses for the periods indicated:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Components of provision for credit losses:				
Provision for non-covered loans	\$ 6,422	\$ 12,376	\$ 11,627	\$ 24,855
Provision for covered loans	(788)		18,094	
 Total provision for loan losses	 5,634	 12,376	 29,721	 24,855
 Provision for unfunded letters of credit	 392	 62	 467	 194
 Total provision for credit losses	 \$ 6,026	 \$ 12,438	 \$ 30,188	 \$ 25,049

Loan charge-off policy. Loans identified as losses by management are charged-off. Loans are assessed for full or partial charge-off when they are between 90 and 120 days past due. Furthermore, residential mortgage and consumer loan accounts are charged-off in accordance with regulatory requirements.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The following tables detail the activity in the allowance for loan losses by portfolio segment for the three months ended June 30, 2011 and 2010, including both covered and non-covered loans:

	Commercial and Industrial	Commercial Real Estate	Residential Mortgage	Consumer	Unallocated	Total
	(in thousands)					
Three Months Ended June 30, 2011:

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

There were no significant purchases of loans during the three and six months ended June 30, 2011. There were no sales of loans, other than from the held for sale loan portfolio, or transfers from loans held for investment to loans held for sale during the three and six months ended June 30, 2011.

Note 10. Goodwill and Other Intangible Assets

Goodwill totaled \$317.9 million at June 30, 2011 and December 31, 2010. There were no changes to the carrying amounts of goodwill allocated to Valley's business segments, or reporting units thereof, for goodwill impairment analysis (as reported in Valley's Annual Report on Form 10-K for the year ended December 31, 2010). There was no impairment of goodwill during the three and six months ended June 30, 2011 and 2010.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The following table summarizes other intangible assets as of June 30, 2011 and December 31, 2010:

	Gross Intangible Assets	Accumulated Amortization (in thousands)	Valuation Allowance	Net Intangible Assets
June 30, 2011				
Loan servicing rights	\$ 67,507	\$ (54,782)	\$ (1,062)	\$ 11,663
Core deposits	27,144	(18,945)		8,199
Other	6,121	(1,981)		4,140
Total other intangible assets	\$ 100,772	\$ (75,708)	\$ (1,062)	\$ 24,002
December 31, 2010				
Loan servicing rights	\$ 65,701	\$ (53,210)	\$ (1,163)	\$ 11,328
Core deposits	27,144	(17,312)		9,832
Other	6,121	(1,631)		4,490
Total other intangible assets	\$ 98,966	\$ (72,153)	\$ (1,163)	\$ 25,650

Loan servicing rights are accounted for using the amortization method. Under this method, Valley amortizes the loan servicing assets in proportion to, and over the period of estimated net servicing revenues. On a quarterly basis, Valley stratifies its loan servicing assets into groupings based on risk characteristics and assesses each group for impairment based on fair value. Impairment charges on loan servicing rights are recognized in earnings when the book value of a stratified group of loan servicing rights exceeds its estimated fair value. Valley recorded net recoveries of impairment charges on its loan servicing rights totaling \$49 thousand and \$101 thousand for the three and six months ended June 30, 2011, respectively, as compared to impairment charges, net of recoveries totaling \$631 thousand and \$686 thousand the three and six months ended June 30, 2010, respectively.

Core deposits are amortized using an accelerated method and have a weighted average amortization period of 9 years. The line item labeled other included in the table above primarily consists of customer lists and covenants not to compete, which are amortized over their expected lives generally using a straight-line method and have a weighted average amortization period of 16 years.

Valley evaluates core deposits and other intangibles for impairment when an indication of impairment exists. No impairment was recognized during the three and six months ended June 30, 2011 and 2010.

The following presents the estimated future amortization expense of other intangible assets for the remainder of 2011 through 2015:

	Loan Servicing Rights	Core Deposits (in thousands)	Other
2011	\$ 1,444	\$ 1,418	\$ 334

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

2012	2,659	2,455	656
2013	2,081	1,858	541
2014	1,569	1,262	466
2015	1,110	782	434

Valley recognized amortization expense on other intangible assets, including net impairment charges and recoveries of impairment charges on loan servicing rights, totaling \$1.8 million and \$2.4 million for the three months ended June 30, 2011 and 2010, respectively and \$3.8 million and \$4.1 million for the six months ended June 30, 2011 and 2010, respectively.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)****Note 11. Pension Plan**

The Bank has a non-contributory defined benefit plan (qualified plan) covering most of its employees. Effective July 1, 2011, the Bank closed the qualified plan to new employees hired on or after such date. The Plan will continue to operate and accrue normal benefits for existing participants. In conjunction with the eligibility change for the qualified plan, the Bank amended its 401(k) plan to increase the Bank's matching percentage of employee contributions for non-pension participants, within certain statutory limits.

The qualified plan benefits are based upon years of credited service and the employee's highest average compensation as defined. It is the Bank's funding policy to contribute annually an amount that can be deducted for federal income tax purposes. Additionally, the Bank has a supplemental non-qualified, non-funded retirement plan (non-qualified plan) which is designed to supplement the pension plan for key officers.

The following table sets forth the components of net periodic pension expense related to the qualified and non-qualified plans for the three and six months ended June 30, 2011 and 2010:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Service cost	\$ 1,563	\$ 1,450	\$ 3,126	\$ 2,900
Interest cost	1,525	1,433	3,049	2,866
Expected return on plan assets	(1,665)	(1,581)	(3,330)	(3,163)
Amortization of prior service cost	160	160	320	320
Amortization of actuarial loss	342	275	685	551
Total net periodic pension expense	1,925	1,737	3,850	3,474
Other changes in plan assets and benefit obligations recognized in other comprehensive income:				
Amortization of prior service cost	(160)	(160)	(320)	(320)
Amortization of actuarial loss	(342)	(275)	(685)	(551)
	(502)	(435)	(1,005)	(871)
Total amount recognized in net periodic benefit cost and other comprehensive income (before tax)	\$ 1,423	\$ 1,302	\$ 2,845	\$ 2,603

The fair value of qualified plan assets increased approximately \$7.4 million, or 8.8 percent to \$91.3 million at June 30, 2011 from \$83.9 million at December 31, 2010. Valley contributed \$5.0 million to the qualified plan during the quarter ended June 30, 2011. Valley does not expect to make any additional contributions to the qualified plan for the remainder of 2011.

Note 12. Stock Based Compensation

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Valley currently has one active employee stock option plan, the 2009 Long-Term Stock Incentive Plan (the Employee Stock Incentive Plan), adopted by Valley s Board of Directors on November 17, 2008 and approved by its shareholders on April 14, 2009. The Long-Term Stock Incentive Plan is administered by the Compensation and Human Resources Committee (the Committee) appointed by Valley s Board of Directors. The Committee can grant awards to officers and key employees of Valley. The purpose of the Employee Stock Incentive Plan is to provide additional incentive to officers and key employees of Valley and its subsidiaries, whose substantial contributions are essential to the continued growth and success of Valley, and to attract and retain competent and dedicated officers and other key employees whose efforts will result in the continued and long-term growth of Valley s business.

Under the Employee Stock Incentive Plan, Valley may award shares to its employees for up to 7.1 million shares of common stock in the form of incentive stock options, non-qualified stock options, stock appreciation rights and restricted stock awards. The essential features of each award are described in the award agreement relating to that

Table of Contents

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

award. The grant, exercise, vesting, settlement or payment of an award may be based upon the fair value of Valley's common stock on the last sale price reported for Valley's common stock on such date or the last sale price reported preceding such date. An incentive stock option's maximum term to exercise is ten years from the date of grant and is subject to a vesting schedule. There were no stock awards granted by Valley for the second quarters of 2011 and 2010. Valley awarded restricted stock totaling 158 shares and 1,208 shares during the six months ended June 30, 2011 and 2010, respectively. As of June 30, 2011, 6.5 million shares of common stock were available for issuance under the 2009 Employee Stock Incentive Plan.

Valley recorded stock-based compensation expense for incentive stock options and restricted stock awards of \$613 thousand and \$868 thousand for the three months ended June 30, 2011 and 2010, respectively and \$1.3 million and \$1.9 million for the six months ended June 30, 2011 and 2010, respectively. The fair values of stock awards are expensed over the vesting period. As of June 30, 2011, the unrecognized amortization expense for all stock-based compensation totaled approximately \$3.9 million and will be recognized over an average remaining vesting period of approximately 2 years.

In 2005, Valley's shareholders approved the 2004 Director Restricted Stock Plan. The plan provides the non-employee members of the Board of Directors with the opportunity to forego some or all of their annual cash retainer and meeting fees in exchange for shares of Valley restricted stock. The restricted shares under the plan vest in full at the end of a five year vesting period, but the Board of Directors retains the right to accelerate the vesting of the restricted shares, at its discretion. There were 23 thousand and 18 thousand shares granted under the plan during the three and six months ended June 30, 2011 and 2010, respectively. There were approximately 102 thousand shares outstanding under this plan and 244 thousand shares available for issuance as of June 30, 2011.

Note 13. Guarantees

Guarantees that have been entered into by Valley include standby letters of credit of \$239.6 million as of June 30, 2011. Standby letters of credit represent the guarantee by Valley of the obligations or performance of a customer in the event the customer is unable to meet or perform its obligations to a third party. Of the total standby letters of credit, \$144.4 million, or 60.3 percent are secured and, in the event of non-performance by the customer, Valley has rights to the underlying collateral, which includes commercial real estate, business assets (physical plant or property, inventory or receivables), marketable securities and cash in the form of bank savings accounts and certificates of deposit. As of June 30, 2011, Valley had a \$987 thousand liability related to the standby letters of credit.

Note 14. Derivative Instruments and Hedging Activities

Valley is exposed to certain risks arising from both its business operations and economic conditions. Valley principally manages its exposures to a wide variety of business and operational risks through management of its core business activities. Valley manages economic risks, including interest rate, liquidity, and credit risk, primarily by managing the amount, sources, and duration of its assets and liabilities and, from time to time, the use of derivative financial instruments. Specifically, Valley enters into derivative financial instruments to manage exposures that arise from business activities that result in the payment of future known and uncertain cash amounts, the value of which are determined by interest rates. Valley's derivative financial instruments are used to manage differences in the amount, timing, and duration of Valley's known or expected cash receipts and its known or expected cash payments mainly related to certain variable-rate borrowings and fixed-rate loan assets.

Cash Flow Hedges of Interest Rate Risk. Valley's objectives in using interest rate derivatives are to add stability to interest expense and to manage its exposure to interest rate movements. To accomplish this objective, Valley uses interest rate swaps and caps as part of its interest rate risk management strategy. Interest rate swaps designated as cash flow hedges involve the payment of either fixed or variable-rate amounts in exchange for the receipt of variable or fixed-rate amounts from a counterparty. Interest rate caps designated as cash flow hedges involve the receipt of variable-rate amounts from a counterparty if interest rates rise above the strike rate on the contract in exchange for an up-front premium.

Table of Contents

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

At June 30, 2011, Valley had the following cash flow hedge derivatives:

Two forward starting interest rate swaps with a total notional amount of \$200 million to hedge the changes in cash flows associated with certain prime-rate-indexed deposits, consisting of consumer and commercial money market deposit accounts. The swaps will require Valley to pay fixed-rate amounts at approximately 4.73 percent in exchange for the receipt of variable-rate payments at the prime rate starting in October 2011 and expiring in October 2016.

Two interest rate caps with a total notional amount of \$100 million, strike rates of 2.50 percent and 2.75 percent, and a maturity date of May 1, 2013 used to hedge the variability in cash flows associated with customer repurchase agreements and money market deposit accounts that have variable interest rates based on the federal funds rate.

Two interest rate caps with a total notional amount of \$100 million, strike rates of 6.00 percent and 6.25 percent, and a maturity date of July 15, 2015 used to hedge the total change in cash flows associated with prime-rate-indexed deposits, consisting of consumer and commercial money market deposit accounts, which have variable interest rates indexed to the prime rate.

Fair Value Hedges of Fixed Rate Assets and Liabilities. Valley is exposed to changes in the fair value of certain of its fixed rate assets or liabilities due to changes in benchmark interest rates based on one month-LIBOR. From time to time, Valley uses interest rate swaps to manage its exposure to changes in fair value. Interest rate swaps designated as fair value hedges involve the receipt of variable rate payments from a counterparty in exchange for Valley making fixed rate payments over the life of the agreements without the exchange of the underlying notional amount.

At June 30, 2011, Valley had the following fair value hedge derivatives:

One interest rate swap with a notional amount of approximately \$9.0 million used to hedge the change in the fair value of a commercial loan.

One interest rate swap with a notional amount of \$51 million used to hedge the change in the fair value of certain fixed-rate brokered certificates of deposit.

For derivatives that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the loss or gain on the hedged item attributable to the hedged risk are recognized in earnings. Valley includes the gain or loss on the hedged items in the same line item as the loss or gain on the related derivatives.

Non-designated Hedges. Derivatives not designated as hedges are used to manage Valley's exposure to interest rate movements and other identified risks but do not meet the strict hedge accounting requirements under U.S. GAAP. Derivatives not designated as hedges are not speculative and result from a service Valley provides to certain customers, which was implemented by Valley during the first quarter of 2011. As the interest rate swaps associated with this program do not meet the strict hedge accounting requirements, changes in the fair value of both the customer swaps and the offsetting swaps are recognized directly in earnings. Valley executes interest rate swaps with commercial banking customers to facilitate their respective risk management strategies. These interest rate swaps with customers are simultaneously offset by interest rate swaps that Valley executes with a third party, such that Valley minimizes its net risk exposure resulting from such transactions. As of June 30, 2011, Valley had four interest rate swaps with an aggregate notional amount of \$66.7 million related to this program.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Amounts included in the consolidated statements of financial condition related to the fair value of Valley's derivative financial instruments were as follows:

	Balance Sheet Line Item	Fair Value	
		June 30, 2011	December 31, 2010
Asset Derivatives:			
Derivatives designated as hedging instruments:			
Cash flow hedge interest rate caps and swaps	Other Assets	\$ 3,349	\$ 8,414
Fair value hedge interest rate swaps	Other Assets	566	
Total derivatives designated as hedging instruments		\$ 3,915	\$ 8,414
Derivatives not designated as hedging instruments:			
Interest rate swaps	Other Assets	\$ 1,069	\$
Total derivatives not designated as hedging instruments		\$ 1,069	\$
Liability Derivatives:			
Derivatives designated as hedging instruments:			
Fair value hedge interest rate swaps	Other Liabilities	\$ 1,436	\$ 1,379
Total derivatives designated as hedging instruments		\$ 1,436	\$ 1,379
Derivatives not designated as hedging instruments:			
Interest rate swaps	Other Liabilities	\$ 1,069	\$
Total derivatives not designated as hedging instruments		\$ 1,069	\$

Gains (losses) included in the consolidated statements of income and in other comprehensive income, on a pre-tax basis, related to interest rate derivatives designated as hedges of cash flows were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
Interest rate caps on short-term borrowings and deposit accounts:				

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Amount of loss reclassified from accumulated other comprehensive income (loss) to interest on short-term borrowings	\$ (611)	\$ (494)	\$ (1,188)	\$ (876)
Amount of loss recognized in other comprehensive income (loss)	(6,533)	(2,693)	(5,099)	(4,757)

Valley recognized a net loss of \$16 thousand and \$29 thousand in other expense for hedge ineffectiveness on the cash flow hedge interest rate caps for the three months ended June 30, 2011 and 2010, respectively and a \$34 thousand net gain for the six months ended June 30, 2011 as compared to a net loss of \$184 thousand for the six months ended June 30, 2010. The accumulated net after-tax loss related to effective cash flow hedges included in accumulated other comprehensive loss was \$3.0 million and \$708 thousand at June 30, 2011 and December 31, 2010, respectively.

Amounts reported in accumulated other comprehensive loss related to cash flow interest rate derivatives are reclassified to interest expense as interest payments are made on the hedged variable interest rate liabilities. During the next twelve months, Valley estimates that \$4.8 million will be reclassified as an increase to interest expense.

Table of Contents**VALLEY NATIONAL BANCORP****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Gains (losses) included in the consolidated statements of income related to interest rate derivatives designated as hedges of fair value were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Derivative - interest rate swaps:				
Interest income - interest and fees on loans	\$ (218)	\$ (566)	\$ (58)	\$ (640)
Interest expense - interest on time deposits	676		566	
Hedged item - loans and deposits:				
Interest income - interest and fees on loans	\$ 218	\$ 566	\$ 58	\$ 640
Interest expense - interest on time deposits	(699)		(581)	

Valley recognized a net loss of \$23 thousand and \$15 thousand in non-interest expense for the three and six months ended June 30, 2011, respectively related to hedge ineffectiveness on the fair value hedge interest rate swaps. Valley also recognized a net reduction to interest expense of \$143 thousand and \$186 thousand for the three and six months ended June 30, 2011, respectively related to Valley's fair value hedges on brokered time deposits, which includes net settlements on the derivatives.

Credit Risk Related Contingent Features. By using derivatives, Valley is exposed to credit risk if counterparties to the derivative contracts do not perform as expected. Management attempts to minimize counterparty credit risk through credit approvals, limits, monitoring procedures and obtaining collateral where appropriate. Credit risk exposure associated with derivative contracts is managed at Valley in conjunction with Valley's consolidated counterparty risk management process. Valley's counterparties and the risk limits monitored by management are periodically reviewed and approved by the Board of Directors.

Valley has agreements with its derivative counterparties providing that if Valley defaults on any of its indebtedness, including default where repayment of the indebtedness has not been accelerated by the lender, then Valley could also be declared in default on its derivative counterparty agreements. Additionally, Valley has an agreement with one of its derivative counterparties that contains provisions that require Valley's debt to maintain an investment grade credit rating from each of the major credit rating agencies. If Valley's credit rating is reduced below investment grade, then the counterparty could terminate the derivative positions, and Valley would be required to settle its obligations under the agreements. As of June 30, 2011, Valley was in compliance with the provisions of its derivative counterparty agreements.

As of June 30, 2011, the fair value of derivatives in a net liability position, which includes accrued interest but excludes any adjustment for nonperformance risk, related to these agreements was \$1.5 million. Valley has derivative counterparty agreements that require minimum collateral posting thresholds for certain counterparties. No collateral has been assigned or posted by Valley's counterparties under the agreements at June 30, 2011. At June 30, 2011, Valley had \$1.5 million in collateral posted with its counterparties.

Note 15. Income Taxes

During the second quarter of 2011, Valley recorded an incremental tax provision of \$8.5 million to increase its liability for uncertain tax positions due to a change in state tax case law. Pursuant to ASC Topic 740, Income Taxes, a change in the measurement of a tax position taken in a prior annual period is recognized as a discrete event in the period in which it occurs.

VALLEY NATIONAL BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

Note 17. Subsequent Event

In July 2011, Valley entered into two forward starting interest rate swaps to hedge the change in cash flows associated with certain prime-rate-indexed deposits, consisting of consumer and commercial money market deposit accounts. The cash flow hedge interest rate swaps, with a total notional amount of \$100 million, will require the payment by Valley of fixed-rate amounts at approximately 5.11 percent in exchange for the receipt of variable-rate payments at the prime rate starting in July 2012 and expiring in July 2017.

Item 2. Management's Discussion and Analysis (MD&A) of Financial Condition and Results of Operations

The following MD&A should be read in conjunction with the consolidated financial statements and notes thereto appearing elsewhere in this report. The words Valley, the Company, we, our and us refer to Valley National Bancorp and its wholly owned subsidiaries, unless we indicate otherwise. Additionally, Valley's principal subsidiary, Valley National Bank, is commonly referred as the Bank in this MD&A.

The MD&A contains supplemental financial information, described in the sections that follow, which has been determined by methods other than U.S. generally accepted accounting principles (GAAP) that management uses in its analysis of our performance. Management believes these non-GAAP financial measures provide information useful to investors in understanding our underlying operational performance, our business and performance trends and facilitates comparisons with the performance of others in the financial services industry. These non-GAAP financial measures should not be considered in isolation or as a substitute for or superior to financial measures calculated in accordance with U.S. GAAP.

Cautionary Statement Concerning Forward-Looking Statements

This Quarterly Report on Form 10-Q, both in the MD&A and elsewhere, contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are not historical facts and include expressions about management's confidence and strategies and management's expectations about new and existing programs and products, acquisitions, relationships, opportunities, taxation, technology, market conditions and economic expectations. These statements may be identified by such forward-looking terminology as should, expect, believe, view, opportunity, allow, continues, reflects, typically, usually, anticipate, or similar statements or variations. Such forward-looking statements involve certain risks and uncertainties and our actual results may differ materially from such forward-looking statements. Factors that may cause actual results to differ materially from those contemplated by such forward-looking statements in addition to those risk factors disclosed in Valley's Annual Report on Form 10-K for the year ended December 31, 2010 include, but are not limited to:

a continued weakness or unexpected decline in the U.S. economy, in particular in New Jersey and the New York Metropolitan area;

higher than expected increases in our allowance for loan losses;

higher than expected increases in loan losses or in the level of nonperforming loans;

unexpected changes in interest rates;

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

higher than expected tax rates, including increases resulting from changes in tax laws, regulations and case law;

a continued or unexpected decline in real estate values within our market areas;

declines in value in our investment portfolio;

increase and decreases in earnings related to the change in fair value of our junior subordinated debentures;

higher than expected FDIC insurance assessments;

the failure of other financial institutions with whom we have trading, clearing, counterparty and other financial relationships;

lack of liquidity to fund our various cash obligations;

unanticipated reduction in our deposit base;

potential acquisitions may disrupt our business;

Table of Contents

government intervention in the U.S. financial system and the effects of and changes in trade and monetary and fiscal policies and laws, including the interest rate policies of the Federal Reserve;

legislative and regulatory actions (including the impact of the Dodd-Frank Wall Street Reform and Consumer Protection Act and related regulations) subject us to additional regulatory oversight which may result in increased compliance costs and/or require us to change our business model;

changes in accounting policies or accounting standards;

our inability to promptly adapt to technological changes;

our internal controls and procedures may not be adequate to prevent losses;

claims and litigation pertaining to fiduciary responsibility, environmental laws and other matters;

the possibility that the expected benefits of acquisitions will not be fully realized, including lower than expected cash flows from covered loan pools acquired in FDIC-assisted transactions;

failure to obtain shareholder approval for the merger of State Bancorp with Valley or to satisfy other conditions to the merger on the proposed terms and within the proposed timeframe including, without limitation, the purchase from the United States Department of the Treasury of each share of State Bancorp's Series A Preferred Stock issued under the Treasury's Capital Purchase Program; and

other unexpected material adverse changes in our operations or earnings.

We assume no obligation to update or revise such forward-looking statements even if experience or changes in our expectations at any time show that the expected results will not be realized.

Critical Accounting Policies and Estimates

Valley's accounting policies are fundamental to understanding management's discussion and analysis of its financial condition and results of operations. Our significant accounting policies are presented in Note 1 to the consolidated financial statements included in Valley's Annual Report on Form 10-K for the year ended December 31, 2010. We identified our policies on the allowance for loan losses, security valuations and impairments, goodwill and other intangible assets, and income taxes to be critical because management has to make subjective and/or complex judgments about matters that are inherently uncertain and because it is likely that materially different amounts could be reported under different conditions or using different assumptions. Management has reviewed the application of these policies with the Audit and Risk Committee of Valley's Board of Directors. Our critical accounting policies are described in detail in Part II, Item 7 in Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

New Authoritative Accounting Guidance

See Note 5 to the consolidated financial statements for a description of new authoritative accounting guidance including the respective dates of adoption and anticipated effects on our results of operations and financial condition.

Company Overview

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

At June 30, 2011, Valley had consolidated total assets of \$14.5 billion, total net loans of \$9.5 billion, total deposits of \$9.7 billion and total shareholders' equity of \$1.3 billion. We have grown significantly in the past several years through both de novo branch expansion and bank acquisitions. In March 2010, the Bank acquired \$688.1 million in certain assets, including loans totaling \$412.3 million (primarily commercial and commercial real estate loans), and assumed all of the deposits totaling \$654.2 million, excluding certain brokered deposits and borrowings, of The Park Avenue Bank and LibertyPointe Bank, both New York State chartered banks, from the Federal Deposit Insurance Corporation (FDIC). In connection with both of these FDIC-assisted transactions, the Bank entered into loss-share agreements with the FDIC. Under the terms of the loss-sharing agreements, the Bank will share in the losses on assets and other real estate owned (referred to as covered loans and covered OREO, together covered assets). See Note 4 to the consolidated financial statements for further details regarding these transactions.

On April 28, 2011, Valley entered into a merger agreement to acquire State Bancorp, Inc. (State Bancorp). State Bancorp is the holding company for State Bank of Long Island, a New York commercial bank with approximately \$1.6 billion in assets and 17 branches in Nassau, Suffolk, Queens, and Manhattan. State Bancorp's focus on providing high-quality personal service to meet the needs of a diverse customer base, including small to middle market businesses,

Table of Contents

professional service firms, municipalities and consumers is much like Valley's long-standing commitment to its communities and customers. Their 17 branch offices located mostly in Long Island and Queens will nicely complement Valley's current New York City locations, including our 5 branches in Queens, and lay a stronger foundation for our continued expansion efforts into these attractive markets. The total consideration for the acquisition is estimated to be \$222 million, resulting in an estimated \$131 million of intangible assets which are dependent on the fair values of State Bancorp's assets and liabilities and Valley's stock price on the closing date of the merger. We recently received regulatory approval from both the Office of the Comptroller of the Currency and the Federal Reserve Bank of New York to complete the merger. We anticipate closing the merger during the fourth quarter of 2011, contingent upon receiving the approval of State Bancorp shareholders, approval to repurchase State Bancorp's senior preferred stock under the Treasury's TARP program, and other customary closing conditions.

Executive Summary

U.S. economic uncertainty remained the norm during the second quarter of 2011 due to several factors, including, but not limited to, persistently high U.S. unemployment, U.S. deficit-reduction and debt downgrading concerns, the impact of Japan's tsunami and nuclear natural disaster on the automobile sector, and fiscal and political issues within the European Union. Unemployment in our primary market (including Northern Jersey and the New York City Metropolitan areas) ranged from 8.4 percent to 8.6 percent during the second quarter of 2011, but improved slightly as compared to 8.8 percent in June 2010. Additionally, the percent of consumers with new bankruptcies and foreclosures in New Jersey and New York remained at historically high levels as last reported during the second quarter of 2011, but were also moderately better compared to one year ago. The Federal Reserve maintained, and continues to support, a target range of zero to 0.25 percent for the federal funds rates due to current economic conditions. We believe a low-rate, high unemployment environment, which is reflective of our current operating environment, would continue to challenge our business operations and results in many ways during the remainder of 2011, as highlighted throughout the following MD&A discussion.

Net income for the second quarter of 2011 was \$36.9 million, or \$0.22 per diluted common share, compared to \$33.0 million, or \$0.20 per diluted common share for the second quarter of 2010. The increase in net income was largely due to: (i) an \$11.0 million increase in non-interest income mainly resulting from increased gains on sales of investment securities classified as available for sale and a decrease in non-cash credit impairment charges on investment securities, partly offset by a reduction in our FDIC loss-share receivable mainly due to better than expected cash flows from certain covered loan pools and a decline in net trading gains mainly due to a decrease in non-cash mark to market gains on our junior subordinated debentures carried at fair value, (ii) a \$6.4 million decrease in the provision for credit losses largely due to a more stable credit environment as compared to one year ago, (iii) a \$552 thousand increase in net interest income on a tax equivalent basis mainly driven by a 14 basis point decline in the cost of average interest bearing liabilities and a reduction in average interest bearing liabilities due to the maturity of high cost time deposits and long-term FHLB borrowings, partially offset by (iv) a \$3.1 million increase in non-interest expense partly due to higher advertising expense, other real estate owned (OREO) write downs and expenses, and general increases in salary and employee benefits expense, and (v) a higher effective income tax rate caused by an \$8.5 million incremental tax provision related to a change in state tax case law during the second quarter of 2011. We expect that the tax law change will not materially impact our effective tax rate in future periods. See the *Income Taxes* Section below and Note 15 to the consolidated financial statements for further discussion.

During the second quarter of 2011, we recognized net gains on securities transactions totaling \$16.5 million mainly due to the sale of \$253.0 million in residential mortgage-backed securities issued by government agencies, perpetual preferred securities issued by Freddie Mac and Fannie Mae (currently not paying dividends due to the U.S. Government placing these entities into conservatorship and suspending their preferred stock dividends in 2008), and U.S. Treasury securities that were classified as available for sale. We elected to sell these securities based on a total rate of return analysis for each security. Additionally, the sales of the Freddie Mac and Fannie Mae securities reduced our exposure to these government sponsored issuers, and allowed us to reinvest the net proceeds mainly in Ginnie Mae mortgage-backed securities, which are fully guaranteed by the federal government and do not require related regulatory capital to be held by the Bank. We have not purchased any Freddie Mac or Fannie Mae mortgage-backed securities since mid-2009 and our outstanding balances of these securities have declined since such time. No impairment charges were recognized on securities in earnings during the second quarter of 2011, as compared to \$825 thousand in the first quarter of 2011 and \$2.0 million during the second quarter of 2010.

Table of Contents

The following economic indicators are just a few of many factors that may be used to assess the market conditions in our primary markets of northern and central New Jersey and the New York City metropolitan area. Generally, market conditions have improved from one year ago, however persistent unemployment, slumping home prices, and high vacancy rates may continue to put pressure on the performance of some borrowers, mainly within our commercial real estate and residential mortgage portfolios, and the level of new loan demand within our area.

Key Economic Indicators:	For the Month Ended

NA not available

Sources: Bureau of Labor Statistics, Bureau of Economic Analysis, Federal Reserve Bank of New York, S&P Indices, and the U.S. Census Bureau.

Total non-covered loans (loans not subject to loss-sharing agreements with the FDIC) increased \$73.0 million, or 3.2 percent on an annualized basis to approximately \$9.3 billion at June 30, 2011 as compared to March 31, 2011 mainly due to a \$99.5 million increase in our residential mortgage loans, partially offset by an increase in commercial loan prepayments and a continued decline in our automobile loan portfolio. Our residential mortgage originations remain one of the noteworthy areas of our lending operations, as we originated over \$230 million in new and refinanced residential mortgages in the second quarter of 2011 and \$550 million for the six months ended June 30, 2011. Much of our residential loan volume in 2011 was due to the continued success of our one-price refinancing program with total closing costs as low as \$499 including title insurance fees and the current low interest rate environment. We continued to retain a majority of our residential mortgage loan originations (77 percent in the second quarter of 2011 compared to 73 percent in the first quarter of 2011) and hold them for investment purposes rather than sell the loans in the secondary market. Our decision to retain certain mortgage originations is based on the composition of our interest earning assets and interest bearing liabilities and our ability to manage the interest rate risk associated with certain levels of these instruments.

Our commercial lending portfolio, including commercial, commercial real estate, and construction loans, totaled \$5.7 billion at June 30, 2011 and remained relatively unchanged from March 31, 2011. However, commercial and industrial loans declined \$33.8 million compared to the linked quarter of 2011 due to several factors, including a seasonal decline in line of credit usage within asset-based lending, higher prepayments,

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

including the \$10.7 million payoff in full of a performing, but internally criticized loan, and strong competition for quality credits in a weakened economy. Commercial real estate loans grew by \$28.8 million during the second quarter of 2011 and offset much of the decline in commercial and industrial loans and construction loans. The increase in commercial real estate loans was due to new co-op and multifamily loan relationships as we increased our business emphasis on this type of lending within our primary markets during 2011. We believe there are profitable growth opportunities in these lending areas that still offer sound credit metrics and can nicely fill in for the tepid loan demand from other commercial real estate loan types, including construction loans which also declined \$4.4 million during the second quarter of 2011, caused by the current state of the U.S. economy and housing markets.

Our consumer loans, including home equity, automobile, and other consumer loans, declined \$17.1 million from March 31, 2011 to June 30, 2011 mostly due to a \$20.0 million decline in the auto portfolio. Auto balances declined due to several factors, including our high credit standards, acceptable loan to collateral value levels, and high unemployment levels. Additionally, in an attempt to build market share, some large competitors continue to offer rates and terms that are less than Valley's profitability thresholds. These factors may continue to constrain the levels of our auto loan originations for the remainder of 2011. See further details on our loan activities, including the covered loan portfolio, under the Loan Portfolio section below.

Mindful of the difficult business environment and the higher delinquency rates reported throughout the banking industry, we believe our loan portfolio's credit performance remained at an acceptable level at June 30, 2011. Total loans past due in excess of 30 days decreased 0.04 percent to 1.66 percent of our total loan portfolio of \$9.6 billion as of June 30, 2011 compared to 1.70 percent of total loans at March 31, 2011 mainly due to a reduction in construction loans within the 30 to 89 days past due loan category. Our non-accrual loans increased \$12.5 million to \$113.8 million, or 1.19 percent of total loans at June 30, 2011 as compared to \$101.3 million, or 1.06 percent of total loans at March 31, 2011. The increase was mostly due to an \$11.3 million increase in non-accrual commercial real estate loans to \$43.0 million, or 1.23 percent of the commercial real estate loan portfolio at June 30, 2011 as compared to the linked quarter mostly caused by five additional non-performing relationships totaling \$11.8 million (with \$442 thousand in related specific reserves included in our total allowance for loan losses) at June 30, 2011. Although the timing of collection is uncertain, we believe most of our non-accrual loans are well secured and, ultimately, collectible. Our lending strategy is based on underwriting standards designed to maintain high credit quality and we are cautiously optimistic regarding the overall future performance of our loan portfolio. However, due to the potential for future credit deterioration caused by the unpredictable direction of the economy and high levels of unemployment, management cannot provide assurance that our non-performing assets will remain at the levels reported as of June 30, 2011. See Non-performing Assets section below for further analysis of our credit quality.

Total deposits decreased \$15.9 million to approximately \$9.7 billion at June 30, 2011 from March 31, 2011. Savings, NOW and money market deposits decreased \$74.9 million to \$4.3 billion at June 30, 2011 as compared to March 31,

Table of Contents

2011 largely due to repayment of \$117.0 million in brokered money market funds entered into and used by management to partially fund investment security purchases during the first quarter of 2011. Brokered money market funds with variable rates based on the U.S. dollar one month LIBOR rate plus 5 basis points totaled \$102.9 million at June 30, 2011. Management will likely repay the remainder of this funding source from normal principal paydowns and interest from its investment securities portfolio during the remainder of 2011 based on the level of interest rates and other funding sources available for its asset/liability management strategies. Time deposits increased \$35.9 million during the second quarter mainly due to new retail three, five and six-year term certificates of deposit. Non-interest bearing deposits also increased \$23.0 million as compared to March 31, 2011 mainly due to general increases in both commercial and retail deposits.

The following table presents our annualized performance ratios for the periods indicated:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
Return on average assets	1.03%	0.93%	1.03%	0.85%
Return on average shareholders' equity	11.24	10.44	11.24	9.58
Return on average tangible shareholders' equity (ROATE)	15.22	14.16	15.24	12.96

ROATE, which is a non-GAAP measure, is computed by dividing net income by average shareholders' equity less average goodwill and average other intangible assets, as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(\$ in thousands)			
Net income	\$ 36,894	\$ 33,010	\$ 73,479	\$ 60,373
Average shareholders' equity	1,312,501	1,264,633	1,307,708	1,259,937
Less: Average goodwill and other intangible assets	(342,590)	(332,273)	(343,245)	(327,896)
Average tangible shareholders' equity	\$ 969,911	\$ 932,360	\$ 964,463	\$ 932,041
Annualized ROATE	15.22%	14.16%	15.24%	12.96%

Management believes the ROATE measure provides information useful to management and investors in understanding our underlying operational performance, our business and performance trends and the measure facilitates comparisons with the performance of others in the financial services industry. This non-GAAP financial measure should not be considered in isolation or as a substitute for or superior to financial measures calculated in accordance with U.S. GAAP.

All of the above ratios were impacted by net trading gains and losses and net gains on securities transactions recognized in non-interest income. These amounts can vary widely from period to period due to the recognition of non-cash gains or losses on the change in the fair value of our junior subordinated debentures carried at fair value and our trading securities portfolio, as well as the level of sales of our investment securities classified as available for sale. See the *Non-Interest Income* section below for more details.

Net Interest Income

Net interest income on a tax equivalent basis was \$119.0 million for the second quarter of 2011, a \$736 thousand increase from the first quarter of 2011 and an increase of \$552 thousand from the second quarter of 2010. The increase from the second quarter of 2010 was mostly attributable to lower interest expense caused by maturing high cost time deposits and FHLB borrowings, lower rates on interest bearing deposits, partially offset by lower yields on new loans and investments.

Table of Contents

Average interest earning assets increased \$90.7 million to \$12.8 billion for the second quarter of 2011 compared to the second quarter of 2010 largely due to improved loan growth. Compared to the first quarter of 2011, average interest earning assets increased \$67.4 million for the second quarter of 2011 due to increases of \$161.8 million and \$58.2 million in average loans and federal funds sold and other interest bearing deposits, respectively, partially offset by a \$152.5 million decrease in average investment securities. Average loans continued to increase quarter over quarter due to strong residential mortgage loan volumes, as well as growth in the commercial real estate loan portfolio mainly due to our focus on co-op and multifamily loan lending during 2011. Average federal funds sold and other interest bearing deposits increased due to higher excess cash balances maintained at the Federal Reserve Bank of New York during the second quarter of 2011 period partly due to investment securities sales during the period. Average investments declined from the first quarter of 2011 mainly due to the sale of \$239 million in residential mortgage-backed securities issued by U.S. government sponsored agencies that were classified as available for sale during the first quarter of 2011 and \$22.6 million in trust preferred securities (including a \$10.2 million security classified as trading) called for early redemption during April 2011.

Average interest bearing liabilities decreased \$82.8 million to \$10.3 billion for the second quarter of 2011 compared with the second quarter of 2010 mainly due to the run-off of higher cost retail time deposits and the maturity of \$206 million in long-term FHLB borrowings during 2011. The funding from the FHLB borrowings was partially replaced with lower cost deposits, including the purchase of 3 to 5 year-term brokered certificates of deposit totaling \$102.3 million during the first quarter of 2011. Compared to the first quarter of 2011, average interest bearing liabilities decreased \$2.7 million for the second quarter of 2011. Average interest bearing deposits increased \$211.6 million mainly due to brokered money market deposits used to fund the additional purchases of taxable investment securities in the first quarter of 2011 and the \$102.3 million of new brokered certificates of deposit mostly purchased during March 2011. Average short-term borrowings declined \$73.9 million from the first quarter of 2011 mainly due to lower customer repo (demand deposit sweep) balances during the second quarter of 2011. The maturing FHLB borrowings primarily caused a \$140.4 million decrease in average long-term borrowings during the second quarter of 2011.

Interest income, on a tax equivalent basis decreased \$67 thousand for the second quarter of 2011 compared to the first quarter of 2011 primarily due to lower interest income from taxable investments. Interest income from taxable investments, on a tax equivalent basis decreased \$1.4 million or 4.6 percent for the three months ended June 30, 2011 compared to the first quarter of 2011. The quarter over quarter decrease was driven by lower average taxable investments balances due to the aforementioned sales of residential mortgage-backed securities and calls of trust preferred securities, and lower yields on new investments replacing principal paydowns on higher yielding investments. Interest income from non-taxable investments also declined \$117 thousand due to lower balances. However, interest income from loans, on a tax equivalent basis increased approximately \$1.5 million as compared to the first quarter of 2011 primarily due to residential mortgage and commercial real estate loan growth and an increase of \$894 thousand in the accretion on covered loan pools during the second quarter of 2011 as these pools, on an aggregate basis, continue to perform better than expected at the acquisitions dates, partially offset by loan renewals at lower interest rates.

Interest expense decreased \$803 thousand for the second quarter of 2011 as compared to the first quarter of 2011 primarily due to the maturity of \$206 million of higher cost long-term FHLB advances during the first half of 2011, partially offset by higher interest expense on deposits due to new funding from low cost brokered money market and time deposits obtained in the latter part of the first quarter of 2011, as well as a modest increase in interest rates on our money market deposit accounts.

The net interest margin on a tax equivalent basis was 3.71 percent for the second quarter of 2011, unchanged from the linked first quarter of 2011, and a 1 basis point decline from 3.72 percent for the quarter ended June 30, 2010. The yield on average interest earning assets decreased by three basis points from the first quarter of 2011 due to a moderate decrease in yield on average loans and lower average non-taxable investment securities, partially offset by a higher yield on non-taxable investments and a greater amount of loans within the composition of interest earning assets. The cost of average interest bearing liabilities declined three basis points from the first quarter of 2011 mainly due to a one basis point decrease in the cost of average long-term borrowings due to the maturity of higher cost FHLB advances and a greater percentage of lower cost deposits to other borrowings, partially offset by a three basis point increase in the cost of average savings, NOW, and money market accounts. This increase was mainly caused by a moderate increase in our interest rates on money market deposits and a one basis point increase in the cost of average time deposits due to

Table of Contents

additional three and five year time deposits, including the brokered certificates of deposit purchased in March and February 2011.

Based on the current level of interest rates, we anticipate lower yields on new loans and investments during the third quarter of 2011 which may negatively impact our net interest income. However, we believe our second quarter loan growth, additional accretion from certain loan pools with higher forecasted cash flows than was originally expected at the acquisition dates, and the maturity of \$90 million in FHLB borrowings with a weighted average interest rate of 5.07 percent in late April 2011 should positively impact our net interest income and margin and may mitigate some of the impact of the low level of interest rates on our net interest income and margin.

The following table reflects the components of net interest income for the three months ended June 30, 2011, March 31, 2011 and June 30, 2010:

Table of Contents

Insurance commissions increased \$997 thousand and \$2.2 million for the three and six months ended June 30, 2011, respectively as compared to the same periods in 2010 mainly due to additional commissions generated from our insurance subsidiary's agency asset acquisition during December 2010. See Note 4 to the consolidated financial statements for more details.

Service charges on deposit accounts decreased \$1.0 million and \$1.6 million during the three and six months ended June 30, 2011, respectively as compared to the same periods in 2010, mainly due to a decrease in non-sufficient funds charges and overdraft protection fees. The decline in these fees reflects both better account management by our customers caused, in part, by economic uncertainty and higher savings rates, and new regulatory restrictions on overdraft charges enacted during the third quarter of 2010.

Net gains on securities transactions increased \$12.8 million and \$14.7 million for the three and six months ended June 30, 2011, respectively, as compared to the same periods in 2010. These increases were mainly due to gains on the sale of \$253.0 million in residential mortgage-backed securities issued by government agencies, perpetual preferred securities issued by Freddie Mac and Fannie Mae, and U.S. Treasury securities classified as available for sale in the second quarter of 2011. We elected to sell these securities based on a total rate of return analysis for each security. Additionally, the sales of the Freddie Mac and Fannie Mae securities reduced our exposure to these government sponsored issuers, and allowed us to reinvest the net proceeds mainly in Ginnie Mae mortgage-backed securities, which are fully guaranteed by the federal government and do not require related regulatory capital to be held by the Bank. During the second quarter of 2010, the net gains on securities transactions totaled \$3.7 million and were mainly due to the sale of \$73.9 million in U.S. Treasury securities that were classified as available for sale.

Net impairment losses on securities decreased \$2.0 million during the three months ended June 30, 2011 as compared to the same period in 2010 as no credit impairment losses on securities were recognized during the second quarter of 2011. During the six months ended June 30, 2011, we recognized \$825 thousand in additional estimated credit losses on one previously impaired pooled trust preferred security, as compared to the net impairment losses totaling \$4.6 million during the same period in 2010 due to estimated credit losses on two previously impaired trust preferred securities and three previously impaired private label mortgage-backed securities. See the Investment Securities Portfolio section of this MD&A and Note 7 to the consolidated financial statements for further details on our investment securities impairment analysis.

Net trading gains and losses represent the non-cash mark to market valuations of a small number of single-issuer trust preferred securities held in our trading securities portfolio and the non-cash mark to market valuation of our junior subordinated debentures (issued by VNB Capital Trust I) carried at fair value. Net trading gains decreased \$1.9 million to a loss of \$1.0 million for the second quarter of 2011 and increased \$4.5 million to a \$2.3 million gain for the six months ended June 30, 2011 as compared to the same periods in 2010, mainly due to the changes in the fair value of junior subordinated debentures carried at fair value.

Net gains on sales of loans increased \$542 thousand and \$1.6 million for the three and six months ended June 30, 2011, respectively, primarily as a result of higher volumes of conforming residential loans sold into the secondary market in 2011 as compared to the same periods in 2010.

The Bank and the FDIC share in the losses on loans and real estate owned as part of the loss-sharing agreements entered into on both of our FDIC-assisted transactions in March 2010. The asset arising from the loss-sharing agreements is referred to as the FDIC loss-share receivable on our consolidated statements of financial condition (See Note 8 to the consolidated financial statements). Within the non-interest income category, we may recognize income or expense related to the change in the FDIC loss-share receivable resulting from (i) a change in the estimated credit losses on the pools of covered loans, (ii) income from reimbursable expenses incurred during the period, (iii) accretion of the discount resulting from the present value of the receivable recorded at the acquisition dates, and (iv) prospective recognition of decreases in the receivable attributable to better than originally expected cash flows on certain covered loan pools.

During the three months ended June 30, 2011, we recognized a \$2.7 million reduction in non-interest income attributable to changes in the FDIC loss-share receivable as compared to second quarter of 2010 mostly due to the effect of better than

Table of Contents

originally expected cash flows on certain covered loan pools. During the six months ended June 30, 2011, we recognized \$13.6 million in non-interest income attributable to changes in the FDIC loss-share receivable. This amount consisted of: (i) \$16.9 million caused by additional estimated credit losses on covered loans, (ii) \$1.6 million of reimbursable expenses under the loss sharing agreements, and (iii) \$291 thousand related to the accretion of the discount resulting from the present value of the receivable at the acquisition dates; partially offset by \$5.3 million for the prospective recognition in the loss-share receivable attributable to increased cash flows from certain loan pools in excess of originally forecasted cash flows.

Other non-interest income increased \$1.1 million during the six months ended June 30, 2011 partly due to various settlement items collected from the FDIC in connection with the FDIC-assisted transactions.

In June 2011, the Federal Reserve Board (the FRB) approved a final debit card interchange rule that will cap an issuer's base fee at 21 cents per transaction and allow an additional 5 basis point charge per transaction to help cover fraud losses. In addition, the FRB issued an interim final rule that allows a fraud prevention adjustment of 1 cent per transaction conditioned upon an issuer adopting effective fraud prevention policies and procedures. The effective date for the final and interim final rules on the pricing and routing restrictions, commonly referred to as the Durbin Amendment, is October 1, 2011. Other non-interest income includes debit card interchange fees of approximately \$1.6 million in the second quarter of 2011 and approximately \$3.0 million in the first six months of 2011. We continue to refine our estimate of the potential impact of this regulation on our non-interest income.

Non-Interest Expense

The following table presents the components of non-interest expense for the three and six months ended June 30, 2011 and 2010:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Salary and employee benefits expense	\$ 44,109	\$ 42,935	\$ 88,234	\$ 87,208
Net occupancy and equipment expense	15,467	16,088	32,653	32,029
FDIC insurance assessment	3,302	3,543	6,631	6,976
Amortization of other intangible assets	1,796	2,445	3,758	4,145
Professional and legal fees	3,020	2,613	6,793	4,732
Advertising	2,703	1,111	4,185	2,023
Other	12,683	11,238	24,655	21,214
Total non-interest expense	\$ 83,080	\$ 79,973	\$ 166,909	\$ 158,327

Salary and employee benefits expense increased \$1.2 million and \$1.0 million for the three and six months ended June 30, 2011, respectively, mainly due to normal annual increases in salary expense, as compared to the same periods in 2010.

Net occupancy and equipment expense declined \$621 thousand for the second quarter of 2011 as compared to the second quarter of 2010 mainly due to expense reductions related to the closure of five of seven branches acquired in FDIC-assisted transactions in the second quarter of 2010. The customer service for the closed branches was transferred to existing Valley branches within very close proximity of each location. For the six months ended June 30, 2011, the net occupancy and equipment expense increased \$624 thousand as compared to the same period in 2010 as a result of increased seasonal maintenance and building repairs during the first quarter of 2011, partially offset by the aforementioned decrease in acquired branch related expenses as compared to the 2010 period.

Amortization of other intangible assets decreased \$649 thousand for the second quarter of 2011 as compared to the same quarter of 2010 mainly due to the recognition of a \$631 thousand impairment charge on certain loan servicing rights in the 2010 period as compared to a \$49 thousand net valuation allowance recovery on the fair value of previously impaired loan servicing rights during the second quarter of 2011.

Table of Contents

Professional and legal fees increased \$2.1 million for the six months ended June 30, 2011 as compared to the same period in 2010 primarily due, in part, to increases in legal expenses related to assets acquired in the two FDIC-assisted transactions in March 2010, most of which we believe are reimbursable under the loss sharing agreements with the FDIC.

Advertising expense increased \$1.6 million and \$2.2 million during the three and six months ended June 30, 2011, respectively mainly due to an increase in promotional campaigns, including television and radio.

Other non-interest expense increased \$1.4 million for the quarter ended June 30, 2011, as compared to the second quarter of 2010 largely due to an \$838 thousand write down of an other real estate owned (OREO) commercial property (which is expected to be sold in the third quarter of 2011), as well as a general increase in OREO expenses. During the six months ended June 30, 2011, other non-interest expense increased \$3.4 million primarily due to a \$1.4 million increase in other real estate owned expenses caused by additional expenses related to the FDIC-assisted transactions, a \$479 thousand write down of a repossessed aircraft, as well as the aforementioned \$838 thousand write down of an OREO commercial property.

The efficiency ratio measures total non-interest expense as a percentage of net interest income plus total non-interest income. Our efficiency ratio was 54.95 percent and 53.35 percent for the three and six months ended June 30, 2011, respectively compared to 57.33 percent and 58.63 percent for the same periods in 2010. The lower efficiency ratio in the second quarter of 2011 was primarily due to a \$12.8 million increase in gains on securities transactions and no credit impairment losses on securities, partially offset by an increase in non-interest expense as compared to the second quarter in 2010. We strive to maintain a low efficiency ratio through diligent management of our operating expenses and balance sheet. We believe this non-GAAP measure provides a meaningful comparison of our operational performance and facilitates investors assessments of business performance and trends in comparison to our peers in the banking industry.

Income Taxes

Income tax expense was \$25.2 million and \$14.1 million for the second quarters of 2011 and 2010, respectively. The effective tax rate increased by 10.7 percent to 40.6 percent for the second quarter of 2011 as compared to 29.9 percent for the second quarter of 2010 largely due to an incremental tax provision of \$8.5 million related to a change in state tax case law during the second quarter of 2011, partly offset by our increased and planned investment in additional federal tax credits during 2011.

Income tax expense was \$42.3 million and \$26.3 million for the six months ended June 30, 2011 and 2010, respectively. The effective tax rate increased by 6.2 percent to 36.5 percent for the six months ended June 30, 2011 as compared to 30.3 percent for the same period of 2010 largely due to the aforementioned incremental tax provision related to a change in state tax case law during the second quarter of 2011, partly offset by our increased and planned investment in additional federal tax credits during 2011.

U.S. GAAP requires that any change in judgment or change in measurement of a tax position taken in a prior annual period be recognized as a discrete event in the quarter in which it occurs, rather than being recognized as a change in effective tax rate for the current year. Our adherence to these tax guidelines may result in volatile effective income tax rates in future quarterly and annual periods. Factors that could impact management's judgment include changes in income, tax laws and regulations, and tax planning strategies. We expect that the aforementioned tax law change will not materially impact our effective tax rate in future periods. For the remainder of 2011, we anticipate that our effective tax rate will approximate 29 percent.

Business Segments

We have four business segments that we monitor and report on to manage our business operations. These segments are consumer lending, commercial lending, investment management, and corporate and other adjustments. Our reportable segments have been determined based upon Valley's internal structure of operations and lines of business. Each business segment is reviewed routinely for its asset growth, contribution to income before income taxes and return on average interest earning assets and impairment (if events or circumstances indicate a possible inability to realize the carrying amount). Expenses related to the branch network, all other components of retail banking, along with the back

Table of Contents

office departments of our subsidiary bank are allocated from the corporate and other adjustments segment to each of the other three business segments. Interest expense and internal transfer expense (for general corporate expenses) are allocated to each business segment utilizing a pool funding methodology, whereas each segment is allocated a uniform funding cost based on each segments average earning assets outstanding for the period. The financial reporting for each segment contains allocations and reporting in line with our operations, which may not necessarily be comparable to any other financial institution. The accounting for each segment includes internal accounting policies designed to measure consistent and reasonable financial reporting, and may not necessarily conform to U.S. GAAP.

The following tables present business segments financial data for the three months ended June 30, 2011 and 2010:

	Three Months Ended June 30, 2011				Total
	Consumer Lending	Commercial Lending	Investment Management (\$ in thousands)	Corporate and Other Adjustments	
Average interest earning assets	\$ 3,383,153	\$ 6,236,806	\$ 3,208,080	\$	\$ 12,828,039
Income before income taxes	12,734	27,675	11,841	9,849	62,099
Annualized return on average interest earning assets (before tax)	1.51%	1.77%	1.48%	N/A	1.94%

	Three Months Ended June 30, 2010				Total
	Consumer Lending	Commercial Lending	Investment Management (\$ in thousands)	Corporate and Other Adjustments	
Average interest earning assets	\$ 3,313,925	\$ 6,230,439	\$ 3,192,934	\$	\$ 12,737,298
Income (loss) before income taxes	14,405	22,356	14,472	(4,142)	47,091
Annualized return on average interest earning assets (before tax)	1.74%	1.44%	1.81%	N/A	1.48%

Consumer Lending

The consumer lending segment is mainly comprised of residential mortgage loans, home equity loans and automobile loans. Residential mortgage loans, including \$15.3 million of covered loans, totaled \$2.2 billion and represented 22.6 percent of the total loan portfolio at June 30, 2011. The duration of the residential mortgage loan portfolio is subject to movements in the market level of interest rates and forecasted prepayment speeds. The weighted average life of the automobile loans within the portfolio is relatively unaffected by movements in the market level of interest rates. However, the average life may be impacted by new loans as a result of the availability of credit within the automobile marketplace and consumer demand for purchasing new or used automobiles.

Average interest earning assets for the three months ended June 30, 2011 increased \$69.2 million, as compared to the second quarter of 2010 due to the success of our refinanced residential loan program, partially offset by continued declines in our automobile and home equity loans. Our residential mortgage loans grew by over \$99.5 million during the second quarter of 2011 as we originated over \$230 million in new and refinanced residential mortgage loans during the period, as compared to residential loan originations of approximately \$160 million in the second quarter of 2010. We held over 77 percent of the second quarter of 2011 loan originations in our loan portfolio at June 30, 2011. Our decision to retain mortgage originations is based on the composition of our interest earning assets and interest bearing liabilities and our ability to manage the interest rate risk associated with certain levels of these instruments.

Income before income taxes during the three months ended June 30, 2011 decreased \$1.7 million to \$12.7 million as compared to the same quarter in 2010. The decrease was mainly caused by a \$1.0 million decline in net interest income

Table of Contents

to \$31.4 million for the second quarter of 2011 as the negative impact of lower yields on loans were only partially offset by an increase in average loans and a decrease in our cost of funds during the second quarter of 2011 as compared to the same period in 2010. Additionally, non-interest expense increased \$2.5 million to \$15.2 million for the second quarter of 2011 as compared to the same quarter in 2010. The negative impact of these items was partially offset by a \$662 thousand increase in non-interest income and a lower provision for loan losses. The provision for loan losses decreased \$1.7 million as compared to the second quarter of 2010 due, in part, to lower levels of actual and expected loan losses within the automobile loan portfolio as the used car markets have strengthened over the last several quarters.

The net interest margin decreased 19 basis points as a result of a 33 basis point decrease in interest yield caused by the historically low level of market interest rates, partially offset by a 14 basis point decrease in costs associated with our funding sources. During the second quarter of 2011, our cost of funds was positively impacted by the maturity of higher cost FHLB borrowings during the first and second quarters of 2011. The funding from the FHLB borrowings was mostly replaced with lower cost retail and brokered certificates of deposits.

Commercial Lending

The commercial lending segment is mainly comprised of floating rate and adjustable rate commercial and industrial loans, as well as fixed rate owner occupied and commercial real estate loans. Due to the portfolio's interest rate characteristics, commercial lending is Valley's most sensitive business segment to movements in market interest rates. Commercial and industrial loans, including \$97.7 million of covered loans, totaled approximately \$1.9 billion and represented 20 percent of the total loan portfolio at June 30, 2011. Commercial real estate loans, including \$189.0 million of covered loans, totaled \$4.1 billion and represented 42.6 percent of the total loan portfolio at June 30, 2011.

For the three months ended June 30, 2011, income before income taxes increased \$5.3 million to \$27.7 million compared with the same quarter in 2010 primarily due to an increase in net interest income and a decline in the provision for loan losses, partially offset by a decrease in non-interest income. Net interest income increased \$4.0 million due to higher yields on average balances which increased \$6.4 million as compared to the same quarter of 2010, coupled with our lower cost of funds. The provision for loan losses decreased \$4.7 million to \$4.2 million for the second quarter of 2011 as compared to \$8.9 million for the same quarter in 2010 mainly due to a stabilization of the credit environment and our delinquency trends as compared to the second quarter of 2010. Non-interest income decreased \$3.4 million during the quarter ended June 30, 2011 as compared to the same quarter in 2010. This decrease was partially caused by a \$2.7 million reduction in our non-interest income attributable to a change in our FDIC loss-share receivable reflecting the effect of better than originally expected cash flows on certain covered loan pools.

The net interest margin increased 26 basis points during the second quarter of 2011 mainly as a result of a 12 basis point increase in yield on average loans and 14 basis points decrease in the costs of our funding sources as compared to the same quarter in 2010.

Investment Management

The investment management segment generates a large portion of our income through investments in various types of securities. These securities are mainly comprised of fixed rate investments, trading securities, and depending on our liquid cash position, federal funds sold and interest-bearing deposits with banks (primarily the Federal Reserve Bank of New York), as part of our asset/liability management strategies.

The fixed rate investments are one of Valley's least sensitive assets to changes in market interest rates. However, as we continue to shift the composition of the investment portfolio to shorter-duration securities, the sensitivity to market interest rates will increase. Net gains and losses on the change in fair value of trading securities and net impairment losses on securities are reflected in the corporate and other adjustments segment.

For the three months ended June 30, 2011, income before income taxes decreased \$2.6 million to \$11.8 million as compared to \$14.5 million for the same quarter one year ago mainly due to a \$2.3 million decrease in the net interest income and a \$384 thousand increase in the internal transfer expense during the second quarter of 2011. The decline in the net interest income was mainly as a result of lower market yields on new investment securities, including our increased holdings of residential mortgage-backed securities issued by Ginnie Mae and municipal bonds over the last

Table of Contents

twelve months, replacing normal principal paydowns and sales proceeds from higher yielding securities. The decrease in interest income was partially offset by a 14 basis points decrease in costs associated with our funding sources.

Corporate Segment

The corporate and other adjustments segment represents income and expense items not directly attributable to a specific segment, including net trading and securities gains (losses), and net impairment losses on securities not reported in the investment management segment above, interest expense related to the junior subordinated debentures issued to capital trusts, the change in fair value of Valley's junior subordinated debentures carried at fair value, interest expense related to \$100 million in subordinated notes, as well as income and expense from derivative financial instruments.

The income before income taxes for the corporate segment increased \$13.9 million to \$9.8 million income for the three months ended June 30, 2011 from a \$4.1 million pre-tax loss for the same quarter in 2010 mainly due to an increase of \$13.6 million in non-interest income attributable to a \$12.8 million increase in net gains on securities transactions for the second quarter of 2011. The increase in net gains on securities transactions was mainly due to gains on the sale of \$253.0 million in residential mortgage-backed securities, preferred securities, and U.S. Treasury securities classified as available for sale in the second quarter of 2011.

The following tables present business segments financial data for the six months ended June 30, 2011 and 2010:

	Six Months Ended June 30, 2011				Total
	Consumer Lending	Commercial Lending	Investment Management (\$ in thousands)	Corporate and Other Adjustments	
Average interest earning assets	\$ 3,344,247	\$ 6,195,280	\$ 3,255,001	\$	\$ 12,794,528
Income before income taxes	28,300	53,787	23,201	10,499	115,787
Annualized return on average interest earning assets (before tax)	1.69%	1.74%	1.43%	N/A	1.81%

	Six Months Ended June 30, 2010				Total
	Consumer Lending	Commercial Lending	Investment Management (\$ in thousands)	Corporate and Other Adjustments	
Average interest earning assets	\$ 3,354,486	\$ 6,129,115	\$ 3,258,649	\$	\$ 12,742,250
Income (loss) before income taxes	30,979	44,698	27,335	(16,358)	86,654
Annualized return on average interest earning assets (before tax)	1.85%	1.46%	1.68%	N/A	1.36%

Consumer Lending

Average interest earning assets for the six months ended June 30, 2011 decreased \$10.2 million, as compared to the same period in 2010. This decrease reflects the continued low level of new automobile and home equity loan originations as compared to loan repayments, partially offset by an increase in our residential mortgage portfolio.

Income before income taxes during the six months ended June 30, 2011 decreased \$2.7 million to \$28.3 million as compared to the same period in 2010. The decrease was mainly caused by a \$3.4 million decline in net interest income to \$62.5 million for the first half of 2011 as the negative impact of lower yields on loans were only partially offset by a decrease in our cost of funds during the period. Additionally, non-interest expense increased \$4.4 million to \$29.1

Table of Contents

million for the six months ended June 30, 2011 as compared to the same period one year ago. The negative impact of these items was partially offset by a \$2.0 million increase in non-interest income and a lower provision for loan losses. The provision for loan losses decreased \$3.6 million as compared to the six months ended June 30, 2010 due, in part, to lower levels of loan charge-offs in the automobile loan portfolio.

The net interest margin decreased 19 basis points as a result of a 32 basis point decrease in interest yield, partially offset by a 13 basis point decrease in costs associated with our funding sources. The decrease in our cost of funds was mainly due to the aforementioned decline in our higher cost long-term borrowings.

Commercial Lending

Average interest earning assets for the six months ended June 30, 2011 increased \$66.2 million as compared to the same period in 2010. This increase mainly reflects higher commercial real estate loan volume due to our increased emphasis on co-op and multifamily loan lending in our markets, as well as a moderate increase in loan demand from new and existing commercial customers as compared to the six months ended June 30, 2010.

For the six months ended June 30, 2011, income before income taxes increased \$9.1 million to \$53.8 million compared with the same period one year ago primarily due to increases in non-interest income and net interest income, partially offset by increases in non-interest expense and the provision for loan losses. Non-interest income increased \$12.2 million during the first half of 2011 to \$15.8 million as compared to \$3.6 million for the same period in 2010. This increase was driven by an increase in our FDIC loss-share receivable principally due to additional estimated credit losses on certain covered loan pools. Higher average loan balances, increased yields on loans (including accretion on certain covered loan pools performing better than originally expected at acquisition), and a lower cost of funds all contributed to an \$9.7 million increase in net interest income as compared to the 2010 period. The provision for loan losses increased \$8.7 million during the first six months of 2011 mainly due to an increase in the provision for losses on covered loans caused by the aforementioned additional estimated credit losses on certain covered loan pools.

The net interest margin increased 26 basis points during the six months ended June 30, 2011 mainly as a result of an 13 basis point increase in the yield on average loans and a 13 basis points decrease in the costs of our funding sources as compared to the same period in 2010.

Investment Management

Average investments decreased \$3.6 million during the six months ended June 30, 2011 as compared to the same period one year ago, primarily due to the lower liquid interest bearing cash balances held at the Federal Reserve Bank.

For the six months ended June 30, 2011, income before income taxes decreased \$4.1 million to \$23.2 million for the six months ended June 30, 2011 compared to \$27.3 million for the same period of 2010 primarily due to a \$3.8 million decrease in net interest income coupled with an increase of \$553 thousand increase in the internal transfer expense, partially offset by a \$275 thousand increase in non-interest income.

The net interest margin decreased 24 basis point during the first half of 2011 as compared to the same period one year ago as a result of a 37 basis points decrease in yield on investments, partially offset by a 13 basis points decrease in costs associated with our funding sources. Our net interest margin was negatively impacted by normal principal paydowns and sales of certain higher yielding securities mostly replaced with securities yielding lower current market interest rates.

Corporate Segment

The income before income taxes for the corporate segment increased \$26.9 million to \$10.5 million for the six months ended June 30, 2011 from a loss of \$16.4 million for the same period one year ago. Non-interest income increased \$25.7 million during the first six months of 2011 mainly due to a \$14.7 million increase in net gains on securities transactions and a \$4.5 million increase in net trading gains mainly due to non-cash mark to market gains on our trust preferred debentures carried at fair value.

Table of Contents**ASSET/LIABILITY MANAGEMENT*****Interest Rate Sensitivity***

Our success is largely dependent upon our ability to manage interest rate risk. Interest rate risk can be defined as the exposure of our interest rate sensitive assets and liabilities to the movement in interest rates. Our Asset/Liability Management Committee is responsible for managing such risks and establishing policies that monitor and coordinate our sources and uses of funds. Asset/Liability management is a continuous process due to the constant change in interest rate risk factors. In assessing the appropriate interest rate risk levels for us, management weighs the potential benefit of each risk management activity within the desired parameters of liquidity, capital levels and management's tolerance for exposure to income fluctuations. Many of the actions undertaken by management utilize fair value analysis and attempts to achieve consistent accounting and economic benefits for financial assets and their related funding sources. We have predominately focused on managing our interest rate risk by attempting to match the inherent risk and cash flows of financial assets and liabilities. Specifically, management employs multiple risk management activities such as the level of lower yielding new residential mortgage originations retained in our mortgage portfolio through sales in the secondary market, change in product pricing levels, change in desired maturity levels for new originations, change in balance sheet composition levels as well as several other risk management activities.

We use a simulation model to analyze net interest income sensitivity to movements in interest rates. The simulation model projects net interest income based on various interest rate scenarios over a twelve and twenty-four month period. The model is based on the actual maturity and re-pricing characteristics of rate sensitive assets and liabilities. The model incorporates certain assumptions which management believes to be reasonable regarding the impact of changing interest rates and the prepayment assumptions of certain assets and liabilities as of June 30, 2011. The model assumes changes in interest rates without any proactive change in the composition or size of the balance sheet by management. In the model, the forecasted shape of the yield curve remains static as of June 30, 2011. The impact of interest rate derivatives, such as interest rate swaps and caps, is also included in the model.

Our simulation model is based on market interest rates and prepayment speeds prevalent in the market as of June 30, 2011. Although the size of Valley's balance sheet is forecasted to remain constant as of June 30, 2011 in our model, the composition is adjusted to reflect new interest earning assets and interest bearing liability originations and rate spreads utilizing our actual originations during the second quarter of 2011. The model utilizes an immediate parallel shift in the market interest rates at June 30, 2011.

The following table reflects management's expectations of the change in our net interest income over the next twelve months period in light of the aforementioned assumptions:

Changes in Interest Rates (in basis points)	Estimated Change in Future Net Interest Income	
	Dollar Change	Percentage Change
	(\$ in thousands)	
+200	\$ 6,491	1.42%
+100	(300)	(0.07)
-100	(6,171)	(1.35)

The assumptions used in the net interest income simulation are inherently uncertain. Actual results may differ significantly from those presented in the table above, due to the frequency and timing of changes in interest rates, and changes in spreads between maturity and re-pricing categories. Overall, our net interest income is affected by changes in interest rates and cash flows from our loan and investment portfolios. We actively manage these cash flows in conjunction with our liability mix, duration and interest rates to optimize the net interest income, while structuring the balance sheet in response to actual or potential changes in interest rates. Additionally, our net interest income is impacted by the level of competition within our marketplace. Competition can negatively impact the level of interest

Table of Contents

rates attainable on loans and increase the cost of deposits, which may result in downward pressure on our net interest margin in future periods. Other factors, including, but not limited to, the slope of the yield curve and projected cash flows will impact our net interest income results and may increase or decrease the level of asset sensitivity of our balance sheet.

Convexity is a measure of how the duration of a financial instrument changes as market interest rates change. Potential movements in the convexity of bonds held in our investment portfolio, as well as the duration of the loan portfolio may have a positive or negative impact to our net interest income in varying interest rate environments. As a result, the increase or decrease in forecasted net interest income may not have a linear relationship to the results reflected in the table above. Management cannot provide any assurance about the actual effect of changes in interest rates on our net interest income.

As noted in the table above, we are more susceptible to a decrease in interest rates under a scenario with an immediate parallel change in the level of market interest rates than an increase in interest rates under the same assumptions. However, we believe that a 100 basis point decrease in interest rates as of June 30, 2011 is unlikely given current interest rate levels. A 100 basis point immediate increase in interest rates is projected to minimally decrease net interest income over the next twelve months by only 0.07 percent. The lack of balance sheet sensitivity to such a move in interest rates, is due, in part, to the fact that many of our adjustable rate loans are tied to the Valley prime rate (set by management) which currently exceeds the U.S. prime rate by 125 basis points. Additional information regarding our use of these prime rates can be found under the Net Interest Income section included in Part II Item 7 of Valley's Annual Report on Form 10-K for the year ended December 31, 2010. Other factors, including, but not limited to, the slope of the yield curve and projected cash flows will impact our net interest income results and may increase or decrease the level of asset sensitivity of our balance sheet.

Although we do not expect our Valley prime rate loan portfolio to have an immediate benefit to our interest income in a rising interest rate environment, we have positioned a large portion of our investment portfolio in short-duration securities and residential mortgage-backed securities that will allow us to benefit from a potential rise in interest rates. Specifically, we expect interest income on many of our residential mortgage-backed securities with unamortized purchase premiums to improve if interest rates were to move upward and prepayment speeds on the underlying mortgages decline. The decline in prepayments will lengthen the expected life of each security and reduce the amount of premium amortization expense recognized against interest income each period.

Our interest rate caps designated as cash flow hedging relationships, are designed to protect us from upward movements in interest rates on certain deposits and short-term borrowings based on the prime and effective federal funds rates. Our interest rate swaps designated as cash flow hedging relationships, are designed to protect us from upward movements in interest rates on certain deposits based on the prime rate. We have interest rate caps with a \$200 million notional value, which protect us from upward increases in interest rates on certain deposits and short-term borrowings, and are accounted for as cash flow hedges. During the fourth quarter of 2010, Valley entered into two cash flow hedge interest rate swaps with a notional amount of \$200 million that are forward starting (October 2011) with pay fixed and receive floating rates. The floating rate leg of the transaction is indexed to the prime rate as reported by the Federal Reserve Bank. Additionally, we utilize interest rate swaps at times to effectively convert fixed rate loans and deposits to floating rate instruments. Most of these actions are expected to benefit our net interest income in a rising interest rate environment. However, due to the current low level of interest rates, the strike rate of these instruments, and the forward effective date applicable to the swaps, the cash flow hedge interest rate caps and swaps are expected to have little immediate impact on our net interest income should market interest rates begin to rise during the remainder of 2011. See Note 14 and 17 to the consolidated financial statements for additional information concerning our derivative transactions.

Liquidity***Bank Liquidity***

Liquidity measures the ability to satisfy current and future cash flow needs as they become due. A bank's liquidity reflects its ability to meet loan demand, to accommodate possible outflows in deposits and to take advantage of interest

Table of Contents

rate opportunities in the marketplace. Liquidity management is monitored by our Asset/Liability Management Committee and the Investment Committee of the Board of Directors of Valley National Bank, which review historical funding requirements, current liquidity position, sources and stability of funding, marketability of assets, options for attracting additional funds, and anticipated future funding needs, including the level of unfunded commitments. Our goal is to maintain sufficient asset-based liquidity to cover potential funding requirements in order to minimize our dependence on volatile and potentially unstable funding markets.

Valley National Bank has no required regulatory liquidity ratios to maintain; however, it adheres to an internal liquidity policy. The current policy maintains that we may not have a ratio of loans to deposits in excess of 120 percent and non-core funding (which generally includes certificates of deposits \$100 thousand and over, federal funds purchased, repurchase agreements and Federal Home Loan Bank advances) greater than 50 percent of total assets. At June 30, 2011, the Bank was in compliance with the foregoing policies.

On the asset side of the balance sheet, we have numerous sources of liquid funds in the form of cash and due from banks, interest bearing deposits with banks (including the Federal Reserve Bank of New York), investment securities held to maturity maturing within one year, investment securities available for sale, trading securities, loans held for sale, and, from time to time, federal funds sold. The residential mortgage-backed securities portfolio is a significant source of our liquidity through the monthly cash flow of principal and interest. The liquid assets totaled approximately \$1.6 billion and \$1.7 billion as of June 30, 2011 and December 31, 2010, respectively, representing 12.4 percent and 13.5 percent of earning assets at June 30, 2011 and December 31, 2010, respectively. Of the \$1.6 billion of liquid assets at June 30, 2011, approximately \$498 million of various investment securities were pledged to counterparties to support our earning asset funding strategies.

Additional liquidity is derived from scheduled loan payments of principal and interest, as well as prepayments received. Loan principal payments are projected to be approximately \$3.3 billion over the next twelve months. As a contingency plan for significant funding needs, liquidity could also be derived from the sale of conforming residential mortgages from our loan portfolio, or from the temporary curtailment of lending activities.

On the liability side of the balance sheet, we utilize multiple sources of funds to meet liquidity needs. Our core deposit base, which generally excludes certificates of deposit over \$100 thousand as well as brokered certificates of deposit, represents the largest of these sources. Core deposits averaged approximately \$8.6 billion for the quarter ended June 30, 2011 and \$8.3 billion for the year ended December 31, 2010, representing 67.2 percent and 65.8 percent of average earning assets for the same periods in 2011 and 2010, respectively. The level of interest bearing deposits is affected by interest rates offered, which is often influenced by our need for funds and the need to match the maturities of assets and liabilities.

Additional funding may be provided from short-term liquidity borrowings through deposit gathering networks and in the form of federal funds purchased obtained through our well established relationships with several correspondent banks. While there are no firm lending commitments currently in place, management believes that we could borrow approximately \$1.0 billion for a short time from these banks on a collective basis. Valley National Bank is also a member of the Federal Home Loan Bank of New York and has the ability to borrow from them in the form of FHLB advances secured by pledges of residential mortgage-backed securities and a blanket assignment of qualifying residential mortgage loans. Furthermore, we are able to obtain overnight borrowings from the Federal Reserve Bank via the discount window as a contingency for additional liquidity. At June 30, 2011, our borrowing capacity under the Fed's discount window was approximately \$939 million as compared to \$948 million at December 31, 2010.

We also have access to other short-term and long-term borrowing sources to support our asset base, such as securities sold under agreements to repurchase (repos), treasury tax and loan accounts, and FHLB advances. Our short-term borrowings decreased \$21.2 million to \$171.1 million at June 30, 2011 as compared to \$192.3 million at December 31, 2010 as a result of decreases in customer repo balances and treasury tax and loan accounts totaling \$16.8 million and \$4.4 million, respectively. At June 30, 2011, all short-term repos represent customer deposit balances being swept into this vehicle overnight.

Table of Contents*Corporation Liquidity*

Valley's recurring cash requirements primarily consist of dividends to common shareholders and interest expense on junior subordinated debentures issued to capital trusts. These cash needs are routinely satisfied by dividends collected from Valley National Bank, along with cash flows from investment securities held at the holding company. Projected cash flows from these sources are expected to be adequate to pay common dividends, if declared, and interest expense payable to capital trusts, given the current capital levels and current profitable operations of the bank subsidiary.

As part of our on-going asset/liability management strategies, Valley could use cash to repurchase shares of its outstanding common stock under its share repurchase program, using Valley's own funds and/or dividends received from the Bank, as well as new borrowed funds or capital issuances.

Investment Securities Portfolio

As of June 30, 2011, we had approximately \$2.0 billion, \$863.2 million, and \$22.1 million in held to maturity, available for sale and trading securities, respectively. During the quarter ended June 30, 2011, Valley recognized gross gains on sales transactions of \$16.5 million mainly due to the sale of \$253.0 million in residential mortgage-backed securities issued by government agencies, perpetual preferred securities issued by Freddie Mac and Fannie Mae, and U.S. Treasury securities that were classified as available for sale.

At June 30, 2011, our investment portfolio was comprised of U.S. Treasury securities, U.S. government agencies, tax-exempt issues of states and political subdivisions, residential mortgage-backed securities (including 19 private label mortgage-backed securities), single-issuer trust preferred securities principally issued by bank holding companies (bank issuers) (including 3 pooled securities), corporate bonds (most of which were purchased prior to the financial crisis in 2008 and 2009) primarily issued by banks, and perpetual preferred and common equity securities issued by banks. There were no securities in the name of any one issuer exceeding 10 percent of shareholders' equity, except for residential mortgage-backed securities issued by U.S. government sponsored agencies, including Fannie Mae, Freddie Mac and Ginnie Mae.

Among other securities, our investments in the private label mortgage-backed securities, trust preferred securities, perpetual preferred securities, equity securities, and bank issued corporate bonds may pose a higher risk of future impairment charges to us as a result of the persistently weak U.S. economy and its potential negative effect on the future performance of these bank issuers and/or the underlying mortgage loan collateral.

Other-Than-Temporary Impairment Analysis

We may be required to record impairment charges on our investment securities if they suffer a decline in value that is considered other-than-temporary. Numerous factors, including lack of liquidity for re-sales of certain investment securities, absence of reliable pricing information for investment securities, adverse changes in business climate, adverse actions by regulators, or unanticipated changes in the competitive environment could have a negative effect on our investment portfolio and may result in other-than-temporary impairment on our investment securities in future periods.

Other-than-temporary impairment means we believe the security's impairment is due to factors that could include its inability to pay interest or dividends, its potential for default, and/or other factors. As a result of the current authoritative accounting guidance, when a held to maturity or available for sale debt security is assessed for other-than-temporary impairment, we have to first consider (i) whether we intend to sell the security, and (ii) whether it is more likely than not that we will be required to sell the security prior to recovery of its amortized cost basis. If one of these circumstances applies to a security, an other-than-temporary impairment loss is recognized in the statement of income equal to the full amount of the decline in fair value below amortized cost. If neither of these circumstances applies to a security, but we do not expect to recover the entire amortized cost basis, an other-than-temporary impairment loss has occurred that must be separated into two categories: (i) the amount related to credit loss, and (ii) the amount related to other factors. In assessing the level of other-than-temporary impairment attributable to credit loss, we compare the present value of cash flows expected to be collected with the amortized cost basis of the security. As discussed above, the portion of the total other-than-temporary impairment related to credit loss is recognized in earnings, while the amount related to other

Table of Contents

factors is recognized in other comprehensive income. The total other-than-temporary impairment loss is presented in the statement of income, less the portion recognized in other comprehensive income. The amount of an additional other-than-temporary impairment related to credit losses recognized during the period, may be recorded as a reclassification adjustment from the accumulated other comprehensive income. When a debt security becomes other-than-temporarily impaired, its amortized cost basis is reduced to reflect the portion of the total impairment related to credit loss.

To determine whether a security's impairment is other-than-temporary, Valley considers several factors that include, but are not limited to the following:

The severity and duration of the decline, including the causes of the decline in fair value, such as credit problems, interest rate fluctuations, or market volatility;

Adverse conditions specifically related to the security, an industry, or geographic area;

Failure of the issuer of the security to make scheduled interest or principal payments;

Any changes to the rating of the security by a rating agency or, if applicable, any regulatory actions impacting the security issuer;

Recoveries or additional declines in fair value after the balance sheet date;

Our ability and intent to hold equity security investments until they recover in value, as well as the likelihood of such a recovery in the near term; and

Our intent to sell debt security investments, or if it is more likely than not that we will be required to sell such securities before recovery of their individual amortized cost basis.

For debt securities, the primary consideration in determining whether impairment is other-than-temporary is whether or not we expect to collect all contractual cash flows.

The investment grades in the table below reflect the most current independent analysis performed by third parties of each security as of the date presented and not necessarily the investment grades at the date of our purchase of the securities. For many securities, the rating agencies may not have performed an independent analysis of the tranches owned by us, but rather an analysis of the entire investment pool. For this and other reasons, we believe the assigned investment grades may not accurately reflect the actual credit quality of each security and should not be viewed in isolation as a measure of the quality of our investment portfolio.

Table of Contents

The following table presents the held to maturity and available for sale investment securities portfolios by investment grades at June 30, 2011.

	Amortized Cost	June 30, 2011		Fair Value
		Gross Unrealized Gains (in thousands)	Gross Unrealized Losses	
Held to maturity				
Investment grades:*				
AAA Rated	\$ 1,399,049	\$ 44,555	\$ (1,231)	\$ 1,442,373
AA Rated	137,081	4,265	(74)	141,272
A Rated	85,047	2,229	(179)	87,097
BBB Rated	137,634	7,927	(4,237)	141,324
Non-investment grade	9,487		(554)	8,933
Not rated	234,352	99	(53,091)	181,360
Total investment securities held to maturity	\$ 2,002,650	\$ 59,075	\$ (59,366)	\$ 2,002,359
Available for sale				
Investment grades:*				
AAA Rated	\$ 603,549	\$ 24,955	\$ (591)	\$ 627,913
AA Rated	14,975	546	(276)	15,245
A Rated	47,269	985	(8,911)	39,343
BBB Rated	57,702	1,099	(3,232)	55,569
Non-investment grade	97,438	4,737	(2,865)	99,310
Not rated	25,464	425	(73)	25,816
Total investment securities available for sale	\$ 846,397	\$ 32,747	\$ (15,948)	\$ 863,196

* Rated using external rating agencies (primarily S&P and Moody's). Ratings categories include the entire range. For example, A rated includes A+, A, and A-. Split rated securities with two ratings are categorized at the higher of the rating levels.

The held to maturity portfolio includes \$234.4 million in investments not rated by the rating agencies with aggregate unrealized losses of \$53.1 million at June 30, 2011. The unrealized losses for this category relate mainly to 7 single-issuer bank trust preferred securities, of which \$40.0 million in unrealized losses relate to securities issued by one bank holding company with a combined amortized cost of \$55.0 million. However, the issuer's principal subsidiary bank reported, in its most recent regulatory filing, that it meets the regulatory capital minimum requirements to be considered a well-capitalized institution as of June 30, 2011 (see the Held to Maturity section of Note 7 to the consolidated financial statements for further information regarding our analysis of this bank issuer). Based on this information, management believes that we will receive all principal and interest contractually due on both security issuances. We will continue to closely monitor the credit risk of this issuer and may be required to recognize other-than-temporary impairment on such securities in future periods. All other single-issuer bank trust preferred securities classified as held to maturity or available for sale are paying in accordance with their contractual terms and have no deferrals of interest or defaults. Additionally, we analyze the performance of each issuer on a quarterly basis, including a review of performance data from the issuer's most recent bank regulatory report to assess the company's credit risk and the probability of impairment of the contractual cash flows of the applicable security. Based upon our quarterly review, all of the issuers appear to meet the regulatory capital minimum requirements to be considered a well-capitalized financial institution and/or have maintained performance levels adequate to support the contractual cash flows of the security.

Although all but one majority of these financial institutions were current in their debt service payments at June 30, 2011, there can be no assurance that the current economic conditions or bank regulatory actions will not impair the institutions' future ability to repay our investment in the trust preferred securities, which may result in significant other-

Table of Contents

than-temporary impairment charges to our future earnings. Over the past several years, many banking institutions have been required to defer trust preferred payments and a growing number of banking institutions have been put in receivership by the FDIC. A deferral event by a bank holding company for which we hold trust preferred securities may require us to recognize an other-than-temporary impairment charge if we determine that we no longer expect to collect all contractual interest and principal. A FDIC receivership for any single-issuer would result in a significant loss. See Note 7 to the consolidated financial statements for further details on our trust preferred securities portfolios.

The available for sale portfolio includes investments with non-investment grade ratings with amortized costs and fair values totaling \$97.4 million and \$99.3 million, respectively, at June 30, 2011. The \$2.9 million in unrealized losses for this category mainly relate to 2 pooled trust preferred securities and 2 private mortgage-backed securities. We have found three of the four securities to be temporarily impaired in previous quarters. During the six months ended June 30, 2011, we recorded additional credit impairment charges on one of the pooled trust preferred securities as discussed further in the *Other-than-temporarily impaired securities* section below and Note 7 to the consolidated financial statements.

Other-Than-Temporarily Impaired Securities

Other-than-temporary impairment is a non-cash charge and not necessarily an indicator of a permanent decline in value. Security valuations require significant estimates, judgments and assumptions by management and are considered a critical accounting policy of Valley. See the *Critical Accounting Policies and Estimates* section included in this MD&A for further discussion of this policy.

The following table provides information regarding our other-than-temporary impairment charges on securities recognized in earnings for the three and six months ended June 30, 2011 and 2010.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2011	2010	2011	2010
	(in thousands)			
Available for sale:				
Residential mortgage-backed securities	\$	\$ 2,049	\$	\$ 2,265
Trust preferred securities			825	2,377
Net impairment losses on securities recognized in earnings	\$	\$ 2,049	\$ 825	\$ 4,642

There were no net impairment losses on securities recognized in earnings during the second quarter of 2011 compared to \$2.0 million for the same period in 2010. During the second quarter of 2010, Valley recognized additional estimated credit losses on three previously impaired private label mortgage-backed securities.

For the six months ended June 30, 2011, Valley recognized net impairment losses on securities in earnings totaling \$825 thousand due to additional estimated credit losses on one of the two previously impaired pooled trust preferred securities. For the six months ended June 30, 2010, Valley recognized impairment charges on a total of five individual private label mortgage-backed securities and two previously impaired pooled trust preferred securities.

At June 30, 2011, the five previously impaired private label mortgage-backed securities had a combined amortized cost of \$47.0 million and fair value of \$47.2 million, while the two previously impaired pooled trust preferred securities had a combined amortized cost and fair value of \$5.4 million and \$4.1 million, respectively, after recognition of all credit impairments.

Loan Portfolio

Over 63 percent of Valley's loan portfolio consists of non-covered commercial real estate and residential mortgage loans at June 30, 2011. Valley has no internally planned changes that will significantly impact the current composition of our loan portfolio by loan type. However, many external factors outlined in Item 1A of our Annual Report on Form 10-K for the year ended December 31, 2010 and discussed in this MD&A may impact our ability to maintain the current composition of our loan portfolio.

Table of Contents

The following table presents our loan portfolio segments by state as a percentage of each applicable segment and our percentage of total loans by state at June 30, 2011:

	June 30, 2011 Percentage of Loan Portfolio Segment:				% of Total Loans
	Commercial and Industrial	Real Estate	Residential	Consumer	
New Jersey	52%	65%	81%	66%	66%
New York	32	30	10	18	25
Pennsylvania	2	1	4	13	3
Florida	2	1	2	1	1
Other*	12	3	3	2	5
Total	100%	100%	100%	100%	100%

* Includes states with less than 1 percent of loans in each loan portfolio segment, except for California, which represented 1.89 percent of commercial and industrial loan portfolio as of June 30, 2011.

The following table reflects the composition of the loan portfolio as of the dates presented:

	June 30, 2011	March 31, 2011	December 31, 2010	September 30, 2010	June 30, 2010
	(\$ in thousands)				
Non-covered loans					
Commercial and industrial	\$ 1,825,782	\$ 1,859,626	\$ 1,825,066	\$ 1,824,014	\$ 1,760,071
Commercial real estate:					
Commercial real estate	3,486,597	3,457,768	3,378,252	3,406,089	3,444,169
Construction	413,951	418,304	428,232	440,929	437,115
Total commercial real estate	3,900,548	3,876,072	3,806,484	3,847,018	3,881,284
Residential mortgage	2,147,362	2,047,898	1,925,430	1,890,439	1,911,466
Consumer:					
Home equity	484,812	492,328	512,745	531,168	545,607
Automobile	807,489	827,485	850,801	877,298	866,313
Other consumer	116,606	106,184	88,614	84,724	80,909
Total consumer loans	1,408,907	1,425,997	1,452,160	1,493,190	1,492,829
Total non-covered loans	9,282,599	9,209,593	9,009,140	9,054,661	9,045,650
Covered loans ⁽¹⁾	308,424	336,576	356,655	377,036	385,326
Total loans ⁽²⁾	\$ 9,591,023	\$ 9,546,169	\$ 9,365,795	\$ 9,431,697	\$ 9,430,976

As a percent of total loans:

Commercial and industrial	19.0%	19.5%	19.5%	19.4%	18.7%
Commercial real estate	40.7	40.6	40.6	40.8	41.2
Residential mortgage	22.4	21.5	20.6	20.0	20.2
Consumer loans	14.7	14.9	15.5	15.8	15.8

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Covered loans	3.2	3.5	3.8	4.0	4.1
Total	100.0%	100.0%	100.0%	100.0%	100.0%

- (1) Covered loans primarily consist of commercial real estate loans and commercial and industrial loans.
- (2) Total loans are net of unearned discount and deferred loan fees totaling \$7.7 million, \$7.3 million, \$9.3 million, \$9.0 million, and \$9.2 million at June 30, 2011, March 31, 2011, December 31, 2010, September 30, 2010, and June 30, 2010, respectively.

Non-covered Loans

Non-covered loans are loans not subject to loss-sharing agreements with the FDIC. Non-covered loans increased \$73.0 million to \$9.3 billion at June 30, 2011 from March 31, 2011 and increased \$273.5 million from December 31, 2010. The linked quarter increase was mainly comprised of increases in residential mortgage, commercial real estate, and other consumer loans of \$99.5 million, \$28.8 million, and \$10.4 million, respectively, partially offset by decreases of \$33.8 million, \$20.0 million and \$7.5 million in commercial and industrial loans, and automobile and home equity loans, respectively.

Commercial and industrial loans declined due to several factors including a seasonal decline in line of credit usage within asset-based lending, somewhat softer loan demand coupled with strong competition for quality credits, and increased prepayments during the second quarter including the \$10.7 million payoff in full of a performing, but internally criticized loan.

Commercial real estate loans increased during the second quarter partly due to increased co-op and multifamily loan lending as we increased our business emphasis on this type of lending within our primary markets during the first half of 2011.

Residential mortgage loans continued to increase during the second quarter due to the success of our \$499 refinance program, including our television and radio ad campaigns during the first half of 2011, and the current low level of market interest rates. We originated over \$230 million and \$550 million in new and refinanced residential mortgage loans during the three and six months ended June 30, 2011, respectively. We continued to retain a large majority of our residential mortgage loan originations (77 percent in the second quarter of 2011 compared to 73 percent in the first

Table of Contents

quarter of 2011) and hold them for investment purposes rather than sell the loans in the secondary market. Our decision to retain certain mortgage originations is based on credit criteria and loan to value levels, the composition of our interest earning assets and interest bearing liabilities and our ability to manage the interest rate risk associated with certain levels of these instruments.

Consumer loans declined \$17.1 million, or 4.8 percent on an annualized basis, from the linked quarter ended March 31, 2011. Home equity loans continued to decline during the quarter, in part, due to customer paydowns made in conjunction with first mortgage refinance activity. Automobile loan balances have also continued to decline due to several factors, including our high credit standards, acceptable loan to collateral value levels, and high unemployment levels. Additionally, in an attempt to build market share, some large competitors have continued to offer rates and terms that are less than Valley's profitability thresholds. These factors may continue to constrain the levels of our auto loan originations for the remainder of 2011. Other consumer loan balances increased approximately \$10.4 million to \$116.6 million at June 30, 2011 mainly due to higher usage of personal lines of credit by certain commercial customers and an increase in loans collateralized by life insurance policies.

Despite the overall loan growth in the second quarter of 2011, we may experience declines in the loan portfolio for the remainder of 2011 and beyond due to a slow economic recovery cycle, increases in market interest rates, high unemployment, increased competition for new and existing borrowers, or a change in asset/liability management strategy.

Covered Loans

Loans for which the Bank will share losses with the FDIC are referred to as covered loans, and consist of loans acquired from LibertyPointe Bank and The Park Avenue Bank as a part of two FDIC-assisted transactions during the first quarter of 2010. Our covered loans consist primarily of commercial real estate loans and commercial and industrial loans and totaled \$308.4 million at June 30, 2011 as compared to \$356.7 million at December 31, 2010. Under ASC Subtopic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality, the covered loans were aggregated and accounted for as pools of loans based on common risk characteristics. A pool is accounted for as one asset with a single composite interest rate, an aggregate fair value and expected cash flows.

The difference between contractually required payments due and the cash flows expected to be collected, considering the impact of prepayments, is referred to as the non-accretable difference. The contractually required payments due represents the total undiscounted amount of all uncollected principal and interest payments, adjusted for the effect of estimated prepayments. Contractually required payments due increase or decrease when the contractual terms of the loan agreement are modified or principal and/or interest are paid. The Bank estimates the undiscounted cash flows expected to be collected by incorporating several key assumptions including probability of default rates, loss given default assumptions and the amount and timing of prepayments. The non-accretable difference, which is neither accreted into income nor recorded on our consolidated balance sheet, reflects estimated future credit losses expected to be incurred over the life of the loans. The excess of cash flows expected to be collected over the carrying value of the covered loans net of impairment is referred to as the accretable yield. This amount is not recorded on our consolidated balance sheet, but is accreted into interest income over the remaining life of the loans, or pool of loans, using the effective yield method. The accretable yield is affected by changes in interest rate indices for variable rate loans, changes in prepayment assumptions, and changes in expected principal and interest payments over the estimated lives of the loans. Prepayments affect the estimated life of covered loans and could change the amount of interest income, and possibly principal, expected to be collected.

The Bank periodically evaluates the estimates of cash flows expected to be collected. These evaluations, performed quarterly, require the continued use of key assumptions and estimates, similar to the initial estimate of fair value. Changes in the estimated cash flows expected to be collected may result in changes in the accretable yield and non-accretable difference or reclassifications between accretable yield and the non-accretable difference. During the quarter ended June 30, 2011, on an aggregate basis the acquired pools of covered loans performed better than originally expected, and based on our current estimates, we expect to receive more future cash flows than originally modeled at the acquisition dates. For these pools with better than expected cash flows, the forecasted increase is recorded as an additional accretable yield that is recognized as a

Table of Contents

prospective increase to our interest income on loans. Additionally, we prospectively reduce the FDIC loss-share receivable by the guaranteed portion of the additional amount expected to be received and recognize that amount as a reduction to our non-interest income.

The following table presents changes in the accretable yield for covered loans for the three and six months ended June 30, 2011:

	Three Months Ended June 30, 2011	Six Months Ended June 30, 2011
	(in thousands)	
Balance at the beginning of the period	\$ 109,435	\$ 101,052
Accretion	(8,706)	(16,518)
Net reclassification from non-accretable difference	788	16,983
Balance at the end of the period	\$ 101,517	\$ 101,517

Valley reclassified \$788 thousand and \$17.0 million from the non-accretable difference for covered loans because of increases in expected cash flows for certain pools of covered loans during the three and six months ended June 30, 2011, respectively. This amount will be recognized prospectively as an adjustment to yield over the life of the individual pools.

FDIC Loss-Share Receivable Related to Covered Loans and Foreclosed Assets

The receivable arising from the loss sharing agreements (referred to as the FDIC loss-share receivable on our consolidated statements of financial condition) is measured separately from the covered loan pools because the agreements are not contractually part of the covered loans and are not transferable should the Bank choose to dispose of the covered loans. As of the acquisition dates for the two FDIC-assisted transactions, we recorded an aggregate FDIC loss-share receivable of \$108.0 million, consisting of the present value of the expected future cash flows the Bank expected to receive from the FDIC under the loss sharing agreements. The FDIC loss-share receivable is reduced as the loss sharing payments are received from the FDIC for losses realized on covered loans and other real estate owned acquired in the FDIC-assisted transactions. Actual or expected losses in excess of the acquisition date estimates will result in an increase in the FDIC loss-share receivable and the immediate recognition of non-interest income in our financial statements. However, reductions in the FDIC loss-share receivable due to actual or expected losses that are less than the acquisition date estimates are recognized prospectively over the shorter of (i) the estimated life of the applicable pools of covered loans or (ii) the term of the loss sharing agreements with the FDIC.

The following table presents changes in the FDIC loss-share receivable for the six months ended June 30, 2011:

	(in thousands)
Balance at December 31, 2010	\$ 89,359
Accretion, net*	(4,987)
Increase due to impairment on covered loans*	16,932
Other reimbursable expenses*	1,621
Reimbursements from the FDIC	(22,746)
Balance at June 30, 2011	\$ 80,179

* Valley recognized \$13.6 million in non-interest income for the six months ended June 30, 2011 representing the net effect on the FDIC loss-share receivable of additions for reimbursable expenses and impairment of certain covered loan pools, less a reduction for net accretion. During the six months ended June 30, 2011, there was a \$16.9 million net increase in the FDIC loss-share receivable reflecting (i) \$17.7 million of the additional credit impairment on certain covered loan pools recognized during the first quarter less a \$748 thousand reduction in the credit

impairment estimate during the second quarter of 2011; (ii) \$291

Table of Contents

thousand increase related to the accretion of the discount resulting from the present value of the receivable at the acquisition dates, and (iii) \$1.6 million increase for other reimbursable expenses from the FDIC. These increases in the FDIC loss-share receivable were partially offset by (i) \$5.3 million for the prospective recognition of the effect on the loss-share receivable attributable to an accretable yield adjustment for increased cash flows from certain loan pools in excess of originally forecasted cash flows, which are also recognized on a prospective basis, and (ii) quarterly receipts of our claims under the loss-sharing agreements of \$22.7 million.

See Notes 4 and 8 to the consolidated financial statements for further details on our covered loans, FDIC loss-share receivable, and the FDIC-assisted transactions.

Credit Risk Management and Underwriting Approach

Credit risk management. For all loan types, Valley adheres to a credit policy designed to minimize credit risk while generating the maximum income given the level of risk. Management reviews and approves these policies and procedures on a regular basis with subsequent approval by the Board of Directors annually. Credit authority relating to a significant dollar percentage of the overall portfolio is centralized and controlled by the Credit Risk Management Division and by a Credit Committee. A reporting system supplements the review process by providing management with frequent reports concerning loan production, loan quality, concentrations of credit, loan delinquencies, non-performing, and potential problem loans. Loan portfolio diversification is an important factor utilized by Valley to manage its risk across business sectors and through cyclical economic circumstances.

Our historical and current loan underwriting practice prohibits the origination of payment option ARMs which allow for negative interest amortization and subprime loans. At June 30, 2011, our residential loan portfolio included approximately \$23 million of loans that could be identified by us as non-conforming loans commonly referred to as either alt-A, stated income, or no doc loans. These loans were mostly originated prior to 2008 and had a weighted average loan-to-value ratio of 70 percent at the date of origination. Virtually all of our loan originations in recent years have conformed to rules requiring documentation of income, assets sufficient to close the transactions and debt to income ratios that support the borrower's ability to repay under the loan's proposed terms and conditions. These rules are applied to all loans originated for retention in our portfolio or for sale in the secondary market.

Loan documentation. Loans are well documented in accordance with stringent underwriting policies and verification procedures. General underwriting guidance is consistent across all loan types with variations in procedures and due diligence dictated by the specifics of each loan request. Due diligence standards require acquisition and verification of sufficient financial information to determine a borrower's or guarantor's credit worthiness, capital support, capacity to repay, collateral support, and character. Credit worthiness is generally verified using personal or business credit reports from independent credit reporting agencies. Capital support is determined by acquisition of independent verifications of deposits, investments or other assets. Capacity to repay the loan is based on verifiable liquidity and earnings capacity as shown on financial statements and/or tax returns, banking activity levels, operating statements, rent rolls or independent verification of employment. Finally, collateral valuation is determined via appraisals from independent, professionally designated property appraisers or readily available market resources.

Types of collateral. Loan collateral, when required, may consist of any one or a combination of the following asset types depending upon the loan type and intended purpose: commercial or residential real estate; general business assets including working assets such as accounts receivable, inventory, or fixed assets such as equipment or rolling stock; marketable securities or other forms of liquid assets such as bank deposits or cash surrender value of life insurance; automobiles; or other assets for wherein adequate protective value can be established and/or verified by reliable outside independent appraisers. In addition to these types of collateral, Valley, in many cases, will obtain the personal guarantee of the borrower's principals to mitigate the risk of certain commercial and industrial loans and commercial real estate loans.

Many times, we will underwrite loans to legal entities formed for the limited purpose of the business which is being financed. Credit granted to these entities and the ultimate repayment of such loans is primarily based on the cash flow generated from the property securing the loan or the business that occupies the property. The underlying real property securing the loans is considered a secondary source of repayment, and normally such loans are also supported by guarantees of the legal entity members. Absent such guarantees or approval by our credit committee, our policy

Table of Contents

requires that the loan to value ratio (at origination) be 50 percent or less of the estimated market value of the property as established by an independent licensed appraiser.

Reevaluation of collateral values. Commercial loan renewals, refinancing and other subsequent transactions that include the advancement of new funds or result in the extension of the amortization period beyond the original term, require a new or updated appraisal. Renewals, refinancing and other subsequent transactions that do not include the advancement of new funds (other than for reasonable closing costs) or, in the case of commercial loans, the extension of the amortization period beyond the original term, do not require a new appraisal unless management believes there has been a material change in market conditions or the physical aspects of the property which may negatively impact collectability of our loan. In general, the period of time an appraisal continues to be relevant will vary depending upon the circumstances affecting the property and the marketplace. Examples of factors that could cause material changes to reported values include the passage of time, the volatility of the local market, the availability of financing, the inventory of competing properties, new improvements to, or lack of maintenance of, the subject or competing surrounding properties, changes in zoning and environmental contamination.

Certain impaired loans are reported at the fair value of the underlying collateral if repayment is expected solely from the collateral and are commonly referred to as collateral dependent impaired loans. Collateral values for such loans are typically estimated using individual appraisals performed, on average, every 12 months. Between scheduled appraisals, property values are monitored within the commercial portfolio by reference to recent trends in commercial property sales as published by leading industry sources. Property values are monitored within the residential mortgage portfolio by reference to available market indicators, including real estate price indices within Valley's primary lending areas.

All refinanced residential mortgage loans require new appraisals for both loans held in our loan portfolio and loans originated for sale. Additionally, all loan types are assessed for full or partial charge-off when they are between 90 and 120 days past due based upon their estimated net realizable value.

See Note 8 to our consolidated financial statements for additional information concerning our loan portfolio risk elements, credit risk management and our loan charge-off policy.

Loan Renewals and Modifications

In the normal course of our lending business, we may renew loans to existing customers upon maturity of the existing loan. These renewals are granted provided that the new loan meets our standard underwriting criteria for such loan type. While our traditional underwriting approach has always been conservative, the underwriting criteria for certain loan types are stricter in light of the current economic environment.

Additionally, on a case-by-case basis, we may extend, restructure, or otherwise modify the terms of existing loans from time to time to remain competitive and retain certain profitable customers, as well as assist other customers who may be experiencing financial difficulties. If the borrower is experiencing financial difficulties and a concession has been made at the time of such modification, the loan is classified as a troubled debt restructured loan. Substantially all of our loan modifications that are considered troubled debt restructured loans involve lowering the monthly payments on such loans through either a reduction in interest rate below a market rate, an extension of the term of the loan without a corresponding adjustment to the risk premium reflected in the interest rate, or a combination of these two methods. These modifications rarely result in the forgiveness of principal or accrued interest. In addition, we frequently obtain additional collateral or guarantor support when modifying such loans. If the borrower has demonstrated performance under the previous terms and our underwriting process shows the borrower has the capacity to continue to perform under the restructured terms, the loan will continue to accrue interest. Non-accruing restructured loans may be returned to accrual status when there has been a sustained period of repayment performance (generally six consecutive months of payments) and both principal and interest are deemed collectible.

Loans Originated by Third Parties

From time to time, the Bank purchases residential mortgage and automobile loans originated by, and sometimes serviced by, other financial institutions based on several factors, including current secondary market rates, excess liquidity and other asset/liability management strategies. Purchased residential mortgage loans and automobile loans totaled approximately \$274.5 million and \$88.5 million, respectively, at June 30, 2011 representing 12.8 percent and 11.0 percent of our total residential mortgage and automobile loan portfolios, respectively. Of the \$274.5 million in purchased residential mortgage loans, \$207.6 million were originated by board-approved independent mortgage bankers. The underwriting documentation for such loans is carefully reviewed on an individual loan-by-loan basis by Valley prior to purchase to ensure each loan meets Valley's normal credit underwriting standards. All of the purchased automobile loans are also selected using Valley's normal underwriting criteria at the time of purchase. At June 30, 2011, the independent mortgage banker originated mortgage loans had loans past due 30 days or more totaling 1.6 percent of these loans as compared to 2.1 percent for our total residential mortgage portfolio, including all

delinquencies. Overall, the purchased residential mortgage and automobile portfolios had loans past due 30 days or more totaling 5.0 percent and 0.3 percent of the total loans within each respective portfolio at June 30, 2011.

Non-performing Assets

Non-performing assets (not including covered loans) include non-accrual loans, OREO, and other repossessed assets which consist of automobiles, as well as one aircraft at June 30, 2011. Loans are generally placed on non-accrual status when they become past due in excess of 90 days as to payment of principal or interest. Exceptions to the non-accrual policy may be permitted if the loan is sufficiently collateralized and in the process of collection. OREO is acquired

Table of Contents

through foreclosure on loans secured by land or real estate. OREO and other repossessed assets are reported at the lower of cost or fair value, less cost to sell at the time of acquisition and at the lower of fair value, less estimated costs to sell, or cost thereafter. See Note 8 to the consolidated financial statements for details about our impaired and non-accrual loan accounting policies. Given the persistently weak economy, and relative to many of our peers, the level of non-performing assets remained relatively low as a percentage of the total loan portfolio at June 30, 2011 even though it has moderately increased since March 31, 2011 and as compared to the prior periods in 2010 as shown in the table below.

The following table sets forth by loan category, accruing past due and non-performing assets on non-covered loans on the dates indicated in conjunction with our asset quality ratios:

	June 30, 2011	March 31, 2011	December 31, 2010 (\$ in thousands)	September 30, 2010	June 30, 2010
Accruing past due loans:⁽¹⁾					
30 to 89 days past due:					
Commercial and industrial	\$ 10,915	\$ 11,007	\$ 13,852	\$ 9,917	\$ 14,262

Other real estate owned (OREO ⁽²⁾)	10,797	10,904	10,498	4,698	4,633
Other repossessed assets	929	960	1,707	1,849	1,666
Total non-performing assets (NPAs)	\$ 125,477	\$ 113,154	\$ 117,260	\$ 112,149	\$ 109,809
Performing troubled debt restructured loans					
Performing troubled debt restructured loans	\$ 101,444	\$ 91,673	\$ 89,696	\$ 48,229	\$ 47,959
Total non-accrual loans as a % of loans	1.19%	1.06%	1.12%	1.12%	1.10%
Total NPAs as a % of loans and NPAs	1.29	1.17	1.24	1.18	1.15

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Total accruing past due and non-accrual loans as a % of loans	1.66	1.70	1.77	1.70	1.71
Allowance for losses on non-covered loans as a % of non-accrual loans	105.41	118.18	112.63	107.75	106.89

- (1) Past due loans and non-accrual loans exclude loans that were acquired as part of the LibertyPointe Bank and The Park Avenue Bank FDIC-assisted transactions. These loans are accounted for on a pool basis.
- (2) This table excludes OREO that is related to the LibertyPointe Bank and The Park Avenue Bank FDIC assisted transactions. OREO related to the FDIC-assisted transactions, which totaled \$6.7 million at June 30, 2011 and March 31, 2011; and \$7.8 million, \$12.5 million, and \$12.6 million at December 31, 2010, September 30, 2010, and June 30, 2010, respectively, is subject to the loss-sharing agreements with the FDIC.

Total non-performing assets (NPAs) totaled \$125.5 million, or 1.29 percent of loans and NPAs at June 30, 2011 compared to \$113.2 million, or 1.17 percent of loans and NPAs at March 31, 2011. The \$12.3 million increase in non-performing assets was mostly due to a \$11.3 million increase in non-accrual commercial real estate loans to \$43.0 million, or 1.23 percent of commercial real estate loan portfolio at June 30, 2011. The increase was mostly due to five additional non-performing relationships totaling \$11.8 million (with \$442 thousand in related specific reserves included in our total allowance for loan losses) at June 30, 2011.

Non-accrual loans increased to \$113.8 million at June 30, 2011 as compared to \$101.3 million at March 31, 2011 mainly due to the aforementioned increase in non-accrual commercial real estate loans. Although the timing of collection is uncertain, management believes that most of the non-accrual loans are well secured and largely collectible

Table of Contents

based on, in part, our quarterly review of impaired loans. Our impaired loans, mainly consisting of non-accrual and troubled debt restructured commercial and industrial and commercial real estate loans, totaled \$173.5 million at June 30, 2011 and had \$17.9 million in related specific reserves included in our total allowance for loan losses. Other repossessed assets and OREO (consisting of 12 commercial and residential properties), excluding OREO subject to loss-sharing agreements with the FDIC, totaled a combined \$11.7 million at June 30, 2011 as compared to \$11.9 million at March 31, 2011.

Loans past due 90 days or more and still accruing increased to \$2.7 million at June 30, 2011 compared to \$1.8 million at March 31, 2011 primarily due to the addition of one commercial real estate loan, partly offset by moderate declines in residential mortgage and consumer loans within this delinquency category.

Performing troubled debt restructured loans (restructured loans) with modified terms and not reported as loans 90 days or more past due and still accruing or as non-accrual loans, are performing restructured loans to customers experiencing financial difficulties where a concession has been granted. Our performing restructured loan balances totaled \$101.4 million at June 30, 2011 and consisted of 50 loans (primarily in the commercial and industrial loan and commercial real estate portfolios) as compared to 43 loans totaling \$91.7 million at March 31, 2011. On an aggregate basis, the \$101.4 million in performing restructured loans at June 30, 2011 had a weighted average modified interest rate of approximately 5.06 percent as compared to a yield of 5.62 percent on the entire loan portfolio for the second quarter of 2011.

Allowance for Credit Losses

The allowance for credit losses consists of the allowance for losses on non-covered loans, the allowance for unfunded letters of credit, and the allowance for losses on covered loans related to credit impairment of certain covered loan pools subsequent to acquisition. Management maintains the allowance for credit losses at a level estimated to absorb probable losses inherent in the loan portfolio and unfunded letters of credit commitments at the balance sheet dates, based on ongoing evaluations of the loan portfolio. Our methodology for evaluating the appropriateness of the allowance for non-covered loans includes:

segmentation of the loan portfolio based on the major loan categories, which consist of commercial, commercial real estate (including construction), residential mortgage and other consumer loans;

tracking the historical levels of classified loans and delinquencies;

assessing the nature and trend of loan charge-offs;

providing specific reserves on impaired loans; and

applying economic outlook factors, assigning specific incremental reserves where necessary.

Additionally, the volume of non-performing loans, concentration risks by size, type, and geography, new markets, collateral adequacy, credit policies and procedures, staffing, underwriting consistency, loan review and economic conditions are taken into consideration when evaluating the adequacy of the allowance for credit losses. Allowance for credit losses methodology and accounting policy are fully described in Part II, Item 7 and Note 1 to the consolidated financial statements in Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

While management utilizes its best judgment and information available, the ultimate adequacy of the allowance for credit losses is dependent upon a variety of factors largely beyond our control, including the view of the Office of the Comptroller of the Currency (OCC) toward loan classifications, performance of the loan portfolio, and the economy. The OCC may require, based on their judgments about information available to them at the time of their examination, that certain loan balances be charged off or require that adjustments be made to the allowance for loan losses when their credit evaluations differ from those of management.

Table of Contents

The following table summarizes the relationship among loans, loans charged-off, loan recoveries, the provision for credit losses and the allowance for credit losses for the periods indicated:

	June 30, 2011	Three Months Ended March 31, 2011	June 30, 2010 (\$ in thousands)	Six Months Ended June 30, 2011	June 30, 2010

Provision for unfunded letters of credit	392	75	62	467	194

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Provision for credit losses	\$ 6,026	\$ 24,162	\$ 12,438	\$ 30,188	\$ 25,049
Ratio of net charge-offs of non-covered loans to average loans outstanding	0.26%	0.16%	0.22%	0.21%	0.34%
Ratio of total net charge-offs to average loans outstanding	0.29	0.38	0.22	0.33	0.34
Allowance for non-covered loan losses as a % of non-covered loans	1.29	1.30	1.22	1.29	1.22
Allowance for credit losses as a % of total loans	1.47	1.48	1.19	1.47	1.19

* Include \$639 thousand and \$5.1 million of covered loan charge-offs for the three months ended June 30, 2011 and March 31, 2011. These charge-offs are substantially offset by reimbursements under the FDIC loss-sharing agreements.

Net loan charge-offs decreased \$2.1 million to \$6.9 million for the three months ended June 30, 2011 compared with the first quarter of 2011 mainly due to \$5.1 million in charge-offs on impaired covered loans (primarily included in the commercial and industrial loan category of loans charged-off in the table above) during the first quarter of 2011 as compared to charge-offs totaling \$639 thousand in the second quarter of 2011. The charge-offs on impaired covered loans are substantially covered by loss-sharing agreements with the FDIC. During the second quarter of 2011, charge-offs within the commercial real estate loan portfolio increased mostly due to a \$3.3 million partial charge-off of one impaired loan acquired through a prior non-covered bank acquisition.

The provision for credit losses decreased \$18.1 million to \$6.0 million for the second quarter of 2011 as compared to \$24.1 million for the first quarter of 2011 mainly due to a \$19.6 million decrease in the provision for losses on covered loans, partially offset by an increase of \$1.5 million in the provision in non-covered loans and unfunded letters of credit.

Table of Contents

During the second quarter of 2011, we recorded a \$788 thousand reduction in our provision for losses on covered loans (i.e., loans subject to our loss-sharing agreements with the FDIC), as compared to a provision of \$18.9 million in the first quarter of 2011, due to the slightly lower level of estimated credit impairment within certain pools of covered loans. The \$1.5 million increase in the provision for non-covered loans and unfunded letters of credit reflects, among other factors, the higher level of net charge-offs and non-performing loans during the second quarter of 2011 and our overall analysis of the portfolio.

The following table summarizes the allocation of the allowance for credit losses to specific loan portfolio categories and the allocations as a percentage of each loan category:

	June 30, 2011		March 31, 2011		December 31, 2010	
	Allowance Allocation	Allocation as a % of Loan Category	Allowance Allocation	Allocation as a % of Loan Category	Allowance Allocation	Allocation as a % of Loan Category

Total allowance for credit losses	\$ 140,893	1.47	\$ 141,722	1.48	\$ 126,504	1.35

* Includes the reserve for unfunded letters of credit.

The allowance for losses on non-covered loans (including the reserve for unfunded letters of credit) as a percentage of non-covered loans at June 30, 2011 was 1.32 percent, and remained unchanged from March 31, 2011. During the second quarter of 2011, loss experience and the outlook for the automobile portfolio continued to improve within consumer loans but was mostly negated by increased reserves for commercial and industrial and commercial real estate loans caused, in part, by the weak economy and high unemployment. Our allocated reserves for the commercial real estate loan portfolio increased \$1.0 million from March 31, 2011, mainly as a result of higher loan delinquencies and charge-offs. Management believes that the unallocated allowance is appropriate given the uncertain economic outlook, the size of the loan portfolio and level of loan delinquencies at June 30, 2011.

The allowance for losses on covered loans decreased to \$18.7 million at June 30, 2011, as compared to \$20.1 million at March 31, 2011 due to \$788 thousand reduction in the provision for losses on covered loans and loan charge-offs totaling \$639 thousand during the second quarter of 2011. The charge-offs on loans in impaired covered loan pools are substantially covered by loss-sharing agreements with the FDIC. See Note 8 to the consolidated financial statements for more details.

Capital Adequacy

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

A significant measure of the strength of a financial institution is its shareholders' equity. At both June 30, 2011 and December 31, 2010, shareholders' equity totaled approximately \$1.3 billion, or 9.1 percent and 9.2 percent of total assets, respectively. During the six months ended June 30, 2011, total shareholders' equity moderately increased mainly due to net income of \$73.5 million, \$4.2 million in net proceeds from 308 thousand shares of treasury stock reissued under our dividend reinvestment plan, and increases attributable to the effect of our stock incentive plan, partially offset

Table of Contents

by cash dividends on common stock totaling \$58.1 million and a \$4.6 million increase in our accumulated other comprehensive loss.

Included in shareholders' equity as a component of accumulated other comprehensive loss at June 30, 2011 was an \$11.0 million net unrealized gain on investment securities classified as available for sale, net of deferred tax as compared to a \$13.4 million net unrealized gain, net of deferred tax at December 31, 2010. Also, included as a component of accumulated other comprehensive loss at June 30, 2011 was a charge of \$17.8 million, net of deferred tax, representing the unfunded portion of Valley's various pension obligations, and a \$3.0 million unrealized loss on derivatives, net of deferred tax, used in cash flow hedging relationships.

In 2007, Valley's Board of Directors approved a publicly announced repurchase plan, which allows for the repurchase of up to 4.5 million common shares. Purchases may be made from time to time in the open market or in privately negotiated transactions generally not exceeding prevailing market prices. Repurchased shares are held in treasury and are expected to be used for general corporate purposes or issued under the dividend reinvestment plan. The repurchase plan has no stated expiration date and has approximately 3.9 million shares available for repurchase as of June 30, 2011. Under this repurchase plan, Valley made no purchases of its outstanding shares during the quarter ended June 30, 2011. Valley also purchases shares directly from its employees in connection with employee elections to withhold taxes related to the vesting of restricted stock awards. During the six months ended June 30, 2011, Valley purchased approximately 11 thousand shares of its outstanding common stock at an average price of \$13.13 related to stock awards.

Risk-based capital guidelines define a two-tier capital framework. Tier 1 capital consists of common shareholders' equity and eligible long-term borrowing related to VNB Capital Trust I and GCB Capital Trust III, less disallowed intangibles and adjusted to exclude unrealized gains and losses, net of deferred tax. Total risk-based capital consists of Tier 1 capital, Valley National Bank's subordinated borrowings and the allowance for credit losses up to 1.25 percent of risk-adjusted assets. Risk-adjusted assets are determined by assigning various levels of risk to different categories of assets and off-balance sheet activities.

Table of Contents

The following table presents Valley's and Valley National Bank's actual capital positions and ratios under risk-based capital guidelines at June 30, 2011 and December 31, 2010.

	Actual		Minimum Capital Requirements		To Be Well Capitalized Under Prompt Corrective Action Provision	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
(\$ in thousands)						
As of June 30, 2011

Valley	1,166,423	8.4	557,755	4.0	N/A	N/A
Valley National Bank	1,105,799	7.9	556,748	4.0	695,935	5.0
As of December 31, 2010						
Total Risk-based Capital						
Valley	\$ 1,349,832	12.9%	\$ 836,268	8.0%	\$ N/A	N/A%
Valley National Bank	1,291,928	12.4	834,728	8.0	1,043,410	10.0
Tier 1 Risk-based Capital						
Valley	1,143,328	10.9	418,134	4.0	N/A	N/A
Valley National Bank	1,085,424	10.4	417,364	4.0	626,046	6.0
Tier 1 Leverage Capital						
Valley	1,143,328	8.3	550,665	4.0	N/A	N/A
Valley National Bank	1,085,424	7.9	549,860	4.0	687,325	5.0

Valley's Tier 1 capital position included \$176.3 million of its outstanding trust preferred securities issued by capital trusts as of June 30, 2011 and December 31, 2010. In compliance with U.S. GAAP, Valley does not consolidate its capital trusts. The Dodd-Frank Act was signed into law on July 21, 2010 and imposes new capital requirements on bank and thrift holding companies, including the phase out (through January 2016) of trust preferred securities being permitted in Tier 1 capital for holding companies with consolidated assets of \$15 billion or more. Based on our current interpretation of the Dodd-Frank Act, holding companies with less than \$15 billion in consolidated assets, such as Valley, will continue to be permitted to include trust preferred securities issued before May 19, 2010 in Tier 1 capital within regulatory limits even if its total assets exceed \$15 billion in the future. Based on this final law and regulatory guidelines, Valley included all of its outstanding trust preferred securities in Tier 1 capital at June 30, 2011.

Book value per share was \$7.72 and \$7.64 at June 30, 2011 and December 31, 2010, respectively. Tangible book value per share amounted to \$5.71 and \$5.61 at June 30, 2011 and December 31, 2010, respectively. Tangible book value, which is a non-GAAP measure, is computed by dividing shareholders' equity less goodwill and other intangible assets by common shares outstanding, as follows:

	June 30, 2011	December 31, 2010
(\$ in thousands except for share data)		
Common shares outstanding	169,851,372	169,533,626
Shareholders' equity	\$ 1,311,218	\$ 1,295,205
Less: Goodwill and other intangible assets	341,893	343,541
Tangible shareholders' equity	\$ 969,325	\$ 951,664

Edgar Filing: VALLEY NATIONAL BANCORP - Form 10-Q/A

Tangible book value per common share	\$	5.71	\$	5.61
Book value per share	\$	7.72	\$	7.64

75

Table of Contents

Management believes the tangible book value per share ratio provides information useful to management and investors in understanding our underlying operational performance, our business and performance trends and facilitates comparisons with the performance of others in the financial services industry. This non-GAAP financial measure should not be considered in isolation or as a substitute for or superior to financial measures calculated in accordance with U.S. GAAP.

Typically, our primary source of capital growth is through retention of earnings. Our rate of earnings retention is derived by dividing undistributed earnings per common share by earnings (or net income available to common stockholders) per common share. Our retention ratio was approximately 20.9 percent for the six months ended June 30, 2011, and it was negatively impacted by higher income tax expense due to the incremental tax provision and by a non-cash net impairment losses on securities, partially offset by net gains on securities transactions and net trading gains (mainly consisting of non-cash mark to market gains on the fair value of junior subordinated debentures).

While we expect that our rate of earnings retention to remain at acceptable levels in future periods, potential future mark to market losses on trading securities and our junior subordinated debentures, net impairment losses on securities, and other deterioration in earnings and our balance sheet resulting from the continued recessionary economic conditions may negatively impact our future earnings and ability to maintain our dividend at current levels.

Cash dividends declared amounted to \$0.34 per common share for both the six months ended June 30, 2011 and 2010. The Board continued the cash dividend, which remained unchanged for the second quarter of 2011 but, consistent with its conservative philosophy, the Board is committed to examine and weigh relevant facts and considerations, including its commitment to shareholder value, each time it makes a cash dividend decision in this economic environment. Under Bank Interagency Guidance, the OCC has cautioned banks to carefully consider the dividend payout ratio to ensure they maintain sufficient capital to be able to lend to credit worthy borrowers.

Off-Balance Sheet Arrangements, Contractual Obligations and Other Matters

For a discussion of Valley's off-balance sheet arrangements and contractual obligations see information included in Valley's Annual Report on Form 10-K for the year ended December 31, 2010 in the MD&A section Off-Balance Sheet Arrangements and Notes 13 and 14 to the consolidated financial statements included in this report.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Market risk refers to potential losses arising from changes in interest rates, foreign exchange rates, equity prices, and commodity prices. Valley's market risk is composed primarily of interest rate risk. See page 59 for a discussion of interest rate sensitivity.

Item 4. Controls and Procedures

Valley's Chief Executive Officer (CEO) and Chief Financial Officer (CFO), with the assistance of other members of Valley's management, have evaluated the effectiveness of Valley's disclosure controls and procedures (as defined in Rule 13a-15(e) or Rule 15d-15(e) under the Exchange Act) as of the end of the period covered by this Quarterly Report on Form 10-Q. Based on such evaluation, Valley's CEO and CFO have concluded that Valley's disclosure controls and procedures are effective.

Valley's CEO and CFO have also concluded that there have not been any changes in Valley's internal control over financial reporting during the quarter ended June 30, 2011 that have materially affected, or are reasonably likely to materially affect, Valley's internal control over financial reporting.

Valley's management, including the CEO and CFO, does not expect that our disclosure controls and procedures or our internal controls will prevent all error and all fraud. A control system, no matter how well conceived and operated, provides reasonable, not absolute, assurance that the objectives of the control system are met. The design of a control system reflects resource constraints and the benefits of controls must be considered relative to their costs. Because there are inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within Valley have been or will be detected.

Table of Contents

These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns occur because of simple error or mistake. Controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls is based in part upon certain assumptions about the likelihood of future events. There can be no assurance that any design will succeed in achieving its stated goals under all future conditions. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with the policies or procedures. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

PART II OTHER INFORMATION**Item 1. Legal Proceedings**

In the normal course of business, we may be a party to various outstanding legal proceedings and claims. There have been no material changes in the legal proceedings previously disclosed under Part I, Item 3 of Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

Item 1A. Risk Factors

An investment in our securities is subject to risks inherent in our business. Before making an investment decision, you should carefully consider the risks and uncertainties described below, in addition to the risk factors previously disclosed under Part I, Item 1A of Valley's Annual Report on Form 10-K for the year ended December 31, 2010.

Downgrade of U.S. credit rating and uncertain political, credit and financial market conditions may reduce our net income, capital levels, liquidity and increase our future borrowing costs.

As a result of the uncertain domestic political, credit and financial market conditions, investments in these types of financial instruments pose risks arising from liquidity and credit concerns. Given that future deterioration in the United States credit and financial markets is a possibility, no assurance can be made that losses or significant deterioration in the fair value of our investments will not occur. At June 30, 2011, we had approximately \$200.3 million, \$84.9 million and \$1.6 billion invested in U.S. Treasury securities, U.S. government agency securities, and residential mortgage-backed securities issued or guaranteed by Ginnie Mae and GSEs, respectively. On August 5, 2011, Standard and Poor's downgraded the United States credit rating from its AAA rating to AA+. This downgrade could affect the stability of securities issued or guaranteed by the federal government. These factors could affect the liquidity or valuation of our current portfolio of such investment securities in the future, and could result in our counterparties requiring additional collateral for our borrowings. Further, unless and until the current United States political, credit and financial market conditions have been sufficiently resolved, it may increase our future borrowing costs.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

During the quarter, we did not sell any equity securities not registered under the Securities Act of 1933, as amended. Purchases of equity securities by the issuer and affiliated purchasers during the three months ended June 30, 2011 were as follows:

ISSUER PURCHASES OF EQUITY SECURITIES

Period	Total Number of Shares Purchased	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans ⁽¹⁾	Maximum Number of Shares that May Yet Be Purchased Under the Plans ⁽¹⁾
April 1, 2011 to April 30, 2011	—	\$		3,916,633
May 1, 2011 to May 31, 2011	1,628 ⁽²⁾	13.64		3,916,633
June 1, 2011 to June 30, 2011	1,233 ⁽²⁾	13.04		3,916,633

Total 2,861

- (1) On January 17, 2007, Valley publicly announced its intention to repurchased up to 4.5 million outstanding common shares in the open market or in privately negotiated transactions. The repurchase plan has no stated expiration date. No repurchase plans or programs expired or terminated during the three months ended June 30, 2011.
- (2) Represents repurchases made in connection with the vesting of employee stock awards.

Item 6. Exhibits

- (2) Plan of acquisition, reorganization, arrangement, liquidation or succession.
 - A. Agreement and Plan of Merger, dated April 28, 2011, between Valley National Bancorp and State Bancorp, Inc., incorporated herein by reference to the Registrant's Form 8-K Current Report filed on May 4, 2011.
- (3) Articles of Incorporation and By-laws
 - A. Restated Certificate of Incorporation of the Registrant, incorporated herein by reference to the Registrant's Form 8-K Current Report filed on May 20, 2011.
