BENNETT Environmental Awarded Contracts

Receives Two Contracts To Treat Contaminated Soil Valued at \$12M Cdn.

Oakville, Ontario, June 12, 2003 - BENNETT Environmental Inc., a North American leader in the high temperature treatment of contaminated soils, announces that it has been awarded two new contracts with a total value of \$12 million Cdn. The first contract is part of a TERC (Total Environmental Restoration Contract) issued by the US government to treat soil from a site in the north-eastern United States. The second contract is with the Canadian Government for a variety of sites in Atlantic Canada. These projects are expected to commence shipping this summer. These contracts increase the Company's contract backlog to a record \$272 million Cdn., which does not include any increases in the commitment expected later this year under the five year agreement signed with a large Fortune 500 electrical manufacturer.

Other news from Bennett Environmental includes:

The Company recently announced a 300,000-ton, \$200 million Cdn. Contract. This is the largest in the Company's history and was received for Phase III of the Federal Creosote Superfund site in New Jersey. Shipments from this project will be received this week and this project will extend until 2005 and is subject to further extensions.

The final condition for the approval of the construction permit for the proposed new treatment facility in Belledune, New Brunswick is the submission of the Human Health Risk Assessment. This will be complied with on June 16, 2003. The construction permit is expected shortly. In the meantime, design and construction planning is proceeding on track.

The new 30,000 tonne storage facility at our Saint Ambroise, Quebec facility has been completed this week and is ready to accept shipments. This will give the Company the capability to store the ever-increasing backlog of orders and to dry and optimally blend the soil to maximize throughput.

The Company's \$30 million contract for the removal of contaminated soil at Saglek Labrador will commence as scheduled next week with the mobilization of work crews to the site. The first shipments of soil will be received at our Saint Ambroise, Quebec facility starting in late July. This project will be completed this year.
