---

(1) Estimated solely for purposes of calculating the registration fee in accordance with Rule 457(c) and Rule 457(g) under the Securities Act of 1933, using the average of the high and low price as reported on the Over-The-Counter Bulletin Board on February 14, 2005, which was \$1.215 per share.

(2) \$6,571.87 previously paid.

THE REGISTRANT HEREBY AMENDS THIS REGISTRATION STATEMENT ON SUCH DATE OR DATES AS MAY BE NECESSARY TO DELAY ITS EFFECTIVE DATE UNTIL THE REGISTRANT SHALL FILE A FURTHER AMENDMENT WHICH SPECIFICALLY STATES THAT THIS REGISTRATION STATEMENT SHALL THEREAFTER BECOME EFFECTIVE IN ACCORDANCE WITH SECTION 8(A) OF THE SECURITIES ACT OF 1933 OR UNTIL THE REGISTRATION STATEMENT SHALL BECOME EFFECTIVE ON SUCH DATE AS THE SECURITIES AND EXCHANGE COMMISSION, ACTING PURSUANT TO SAID SECTION 8(A), MAY DETERMINE.

PRELIMINARY PROSPECTUS SUBJECT TO COMPLETION, DATED JUNE 16, 2005

APPLIED DNA SCIENCES, INC.  
45,995,326 SHARES OF  
COMMON STOCK

This prospectus relates to the resale by the selling stockholders of up to 45,995,326 shares of our common stock, including up to 30,367,000 shares issuable upon the exercise of common stock purchase warrants and 25,628,326 shares of common stock. The selling stockholders may sell common stock from time to time in the principal market on which the stock is traded at the prevailing market price or in negotiated transactions. We will pay the expenses of registering these shares.

The following selling stockholders are deemed an "underwriter" within the meaning of the Securities Act of 1933 in connection with the sale of their common stock under this prospectus: Vertical Capital Partners, Inc., a registered broker-dealer; Michael Morris, Susan Diamond; Ronald Heineman and Michael Gochman; all of whom are employees of Vertical Capital Partners. With the exception of Vertical Capital Partners, Inc., Michael Morris, Susan Diamond, Ronald Heineman and Michael Gochman, no other underwriter or person has been engaged to facilitate the sale of shares of common stock in this offering.

Our common stock is registered under Section 12(g) of the Securities Exchange Act of 1934 and is listed on the Over-The-Counter Bulletin Board under the symbol "APDN". The last reported sales price per share of our common stock as reported by the Over-The-Counter Bulletin Board on June 14, 2005, was \$.65.

INVESTING IN THESE SECURITIES INVOLVES SIGNIFICANT RISKS. SEE "RISK FACTORS" BEGINNING ON PAGE 4.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus is \_\_\_\_\_, 2005.

The information in this Prospectus is not complete and may be changed. This Prospectus is included in the Registration Statement that was filed by Applied

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

DNA Sciences, Inc. with the Securities and Exchange Commission. The selling stockholders may not sell these securities until the registration statement becomes effective. This Prospectus is not an offer to sell these securities and is not soliciting an offer to buy these securities in any state where the sale is not permitted.

### PROSPECTUS SUMMARY

The following summary highlights selected information contained in this prospectus. This summary does not contain all the information you should consider before investing in the securities. Before making an investment decision, you should read the entire prospectus carefully, including the "risk factors" section, the financial statements and the secured convertible notes to the financial statements.

#### APPLIED DNA SCIENCES, INC.

We are a provider of proprietary DNA-embedded biotechnology security products that protect corporate and intellectual property from counterfeiting, fraud, piracy, product diversion and unauthorized intrusion. We offer a cost effective method to detect, deter, interdict and prosecute counterfeiting enterprises. We use segments of naturally occurring botanical DNA that have unique characteristics, which are one-of-a-kind sequences. Botanical DNA means the DNA, or Deoxyribonucleic acid, of plants. DNA is the molecular base of all living life forms, including animals and plants. Using various anti-counterfeit mediums, or substrates, such as ink, microchips, glue, paints and holograms, we can authenticate the unique DNA characters to ensure that the product has not been counterfeited or tampered with. Substrates are materials or substances on

Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

which the botanical DNA will interact with the anti-counterfeit solutions we utilize to determine if a product has been tampered with.

For the six months ended March 31, 2005, we did not generate any revenues and had a net loss of \$26,154,951. For the year ended September 30, 2004, we did not generate any revenues and had a net loss of \$19,358,259. As a result of recurring losses from operations and a net deficit in both working capital and stockholders' equity, our auditors, in their report dated January 11, 2005, have expressed substantial doubt about our ability to continue as going concern.

Our principal offices are located at 9229 W. Sunset Boulevard, Suite 830, Los Angeles, California 90069, and our telephone number is (310) 860-1362. We are a Nevada corporation. We maintain a website at www.adnas.com. The information contained on that website is not deemed to be a part of this prospectus.

The Offering

Common stock offered by selling stockholders..... Up to 45,995,326 shares, including the

- 25,628,326 shares of common stock;
- up to 285,000 shares of common stock and common stock purchase warrants at a price of \$1.00 per share;
- up to 5,000 shares of common stock and common stock purchase warrants at a price of \$1.00 per share;
- up to 1,500,000 shares of common stock and common stock purchase warrants at a price of \$1.00 per share;
- up to 750,000 shares of common stock and common stock purchase warrants at a price of \$1.00 per share; and
- up to 17,827,000 shares of common stock and common stock purchase warrants at a price of \$1.00 per share.

This number represents 53.51% of our current common stock.

Common stock to be outstanding after the offering..... Up to 85,958,025 shares

Use of proceeds..... We will not receive any proceeds from the offering. However, we will receive the sale price of the common stock and the proceeds received from the exercise of the common stock purchase warrants for general working capital purposes.

Over-The-Counter Bulletin Board Symbol..... APDN

The above information regarding common stock to be outstanding after the offering is based on 65,856,025 shares of common stock outstanding as of June 14, 2005 and assumes the subsequent exercise of warrants by our selling stockholders.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

### RISK FACTORS

This investment has a high degree of risk. Before you invest you should carefully consider the risks and uncertainties described below and the other information in this prospectus. If any of the following risks actually occur, our business, operating results and financial condition could be harmed and the value of our stock could go down. This means you could lose all or a part of your investment.

#### RISKS RELATING TO OUR BUSINESS:

We Have a History Of Losses Which May Continue, Which May Negatively Impact Our Ability to Achieve Our Business Objectives.

We incurred net losses of \$19,358,259 for the year ended September 30, 2004 and \$3,445,164 for the year ended December 31, 2003. For the six months ended March 31, 2005, we incurred a net loss of \$26,154,951. We cannot assure you that we can achieve or sustain profitability on a quarterly or annual basis in the future. Our operations are subject to the risks and competition inherent in the establishment of a business enterprise. There can be no assurance that future operations will be profitable. Revenues and profits, if any, will depend upon various factors, including whether we will be able to generate revenue. As a result of continuing losses, we may exhaust all of our resources prior to completing the development of our products. Additionally, as we continue to incur losses, our accumulated deficit will continue to increase, which might make it harder for us to obtain financing in the future. We may not achieve our business objectives and the failure to achieve such goals would have an adverse impact on us, which could result in reducing or terminating our operations.

If We Are Unable to Obtain Additional Funding Our Business Operations Will be Harmed and If We Do Obtain Additional Financing Our Then Existing Shareholders May Suffer Substantial Dilution.

We will require additional funds to sustain and expand our research and development activities. We anticipate that we will require up to approximately \$3,000,000 to fund our anticipated research and development operations for the next twelve months, depending on revenue from operations. Additional capital will be required to effectively support the operations and to otherwise implement our overall business strategy. Even if we do receive additional financing, it may not be sufficient to sustain or expand our research and development operations or continue our business operations.

There can be no assurance that financing will be available in amounts or on terms acceptable to us, if at all. The inability to obtain additional capital will restrict our ability to grow and may reduce our ability to continue to conduct business operations. If we are unable to obtain additional financing, we will likely be required to curtail our research and development plans. Any additional equity financing may involve substantial dilution to our then existing shareholders.

OUR INDEPENDENT AUDITORS HAVE EXPRESSED SUBSTANTIAL DOUBT ABOUT OUR ABILITY TO CONTINUE AS A GOING CONCERN, WHICH MAY HINDER OUR ABILITY TO OBTAIN FUTURE FINANCING.

In their report dated January 11, 2005, our independent auditors stated that our financial statements for the year ended December 31, 2004 were prepared assuming that we would continue as a going concern. Our ability to continue as a going concern is an issue raised due to our incurring net losses of \$22,815,034 during the period September 16, 2002 (date of inception) through September 30, 2004. In addition, we have a deficiency in stockholder's equity of \$4,706,508. We continue to experience net operating losses. Our ability to continue as a going concern is subject to our ability to generate a profit and/or obtain

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

necessary funding from outside sources, including obtaining additional funding from the sale of our securities, generating sales or obtaining loans and grants from various financial institutions where possible. Our continued net operating losses increases the difficulty in meeting such goals and there can be no assurances that such methods will prove successful.

OUR RESEARCH AND DEVELOPMENT EFFORTS FOR NEW PRODUCTS MAY BE UNSUCCESSFUL.

We will incur significant research and development expenses to develop new products and technologies. There can be no assurance that any of these products or technologies will be successfully developed or that if developed they will be

3

commercially successful. In the event that we are unable to develop commercialized products from our research and development efforts or we are unable or unwilling to allocate amounts beyond our currently anticipated research and development investment, we could lose our entire investment in these new products and this may materially and adversely affect our business operations, which would result in loss of revenues and greater operating expenses.

FAILURE TO LICENSE NEW TECHNOLOGIES COULD IMPAIR OUR NEW PRODUCT DEVELOPMENT.

To generate broad product lines, it is advantageous to sometimes license technologies from third parties rather than depend exclusively on our own employees. As a result, we believe our ability to license new technologies from third parties is and will continue to be important to our ability to offer new products.

In addition, from time to time we are notified or become aware of patents held by third parties that are related to technologies we are selling or may sell in the future. After a review of these patents, we may decide to seek a license for these technologies from these third parties or discontinue our products. There can be no assurance that we will be able to continue to successfully identify new technologies developed by others. Even if we are able to identify new technologies of interest, we may not be able to negotiate a license on favorable terms, or at all. If we lose the rights to patented technology, we may need to discontinue selling certain products or redesign our products, and we may lose a competitive advantage. Potential competitors could license technologies that we fail to license and potentially erode our market share for certain products. Our licenses typically subject us to various commercializations, sublicensing, minimum payment, and other obligations. If we fail to comply with these requirements, we could lose important rights under a license. In addition, certain rights granted under the license could be lost for reasons beyond our control. We may not receive significant indemnification from a licensor against third party claims of intellectual property infringement.

WE CURRENTLY HAVE NO OR LIMITED MANUFACTURING, SALES, MARKETING OR DISTRIBUTION CAPABILITIES.

We currently have no in-house manufacturing capability. We rely on third-party vendors for this service. We do not currently have any arrangements with any distributors and we may not be able to enter into arrangements with qualified distributors on acceptable terms or at all. We currently have a limited sales and marketing team. If we are not able to develop greater sales, marketing or distribution capacity, we may not be able to generate revenue or sufficient revenue to support our operations.

WE RELY ON OUR LICENSE AGREEMENT WITH BIOWELL TECHNOLOGY FOR THE DEVELOPMENT OF OUR PRODUCTS, AND THE TERMINATION OF THE LICENSE WOULD HAVE A MATERIAL ADVERSE IMPACT ON OUR BUSINESS.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

We have executed a licensing agreement with Biowell Technology and we intend to focus our business on the products developed under this licensing agreement. We will rely upon Biowell Technology to develop, test and produce products under this licensing agreement. As a result of the license agreement, we will not incur expenses with developing products for sale, however, we will be responsible for marketing the product and building brand recognition in our licensed territories. Our license could terminate if we fail to perform any material term or covenant under the license agreement. The termination of our license agreement would have a material adverse impact on our business, such as the loss of products and services, which would reduce or eliminate most of our potential revenue source.

IF WE FAIL TO CLOSE ON OUR ACQUISITION AGREEMENT WITH BIOWELL TECHNOLOGY, BIOWELL IS LIKELY TO TERMINATE OUR LICENSE, WHICH MAY FORCE US TO CEASE OUR OPERATIONS.

We have entered into an agreement with Biowell Technology to purchase all of their intellectual property, which we currently license from them pursuant to a license agreement. In the event that we do not close on the acquisition of the Biowell technology, it is likely that we will lose our license to the technology. The termination of our license agreement would have a material adverse impact on our business, such as the loss of products and services, which would reduce or eliminate most of our potential revenue source and may force us to cease our operations.

4

IF WE FAIL TO INTRODUCE NEW PRODUCTS, OR OUR EXISTING PRODUCTS ARE NOT ACCEPTED BY POTENTIAL CUSTOMERS, WE MAY NOT GAIN OR MAY LOSE MARKET SHARE.

Rapid technological changes and frequent new product introductions are typical for the markets we serve. Our future success will depend in part on continuous, timely development and introduction of new products that address evolving market requirements. We believe successful new product introductions provide a significant competitive advantage because customers invest their time in selecting and learning to use new products, and are often reluctant to switch products. To the extent we fail to introduce new and innovative products, we may lose market share to our competitors, which will be difficult or impossible to regain. Any inability, for technological or other reasons, to successfully develop and introduce new products could reduce our growth rate or damage our business.

We may experience delays in the development and introduction of products. We cannot assure that we will keep pace with the rapid rate of change in life sciences research or that our new products will adequately meet the requirements of the marketplace or achieve market acceptance. Some of the factors affecting market acceptance of new products include:

- o Availability, quality and price relative to competitive products;
- o The timing of introduction of the product relative to competitive products;
- o Customers' opinions of the products' utility;
- o Ease of use;
- o Consistency with prior practices;
- o Scientists' opinions of the products' usefulness;
- o Citation of the product in published research; and
- o General trends in life sciences research.

We have not experienced any difficulties with the preceding factors, however, there can be no assurance that we will not experience difficulties in the future. The expenses or losses associated with unsuccessful product

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

development or lack of market acceptance of our new products could materially adversely affect our business, operating results and financial condition.

A MANUFACTURER'S INABILITY TO PRODUCE OUR GOODS ON TIME AND TO OUR SPECIFICATIONS COULD RESULT IN LOST REVENUE AND NET LOSSES

We do not own or operate any manufacturing facilities and therefore depend upon independent third parties for the manufacture of all of our products. Our products are manufactured to our specifications. The inability of a manufacturer to ship orders of our products in a timely manner or to meet our quality standards could cause us to miss the delivery date requirements of our customers for those items, which could result in cancellation of orders, refusal to accept deliveries or a reduction in purchase prices, any of which could have a material adverse effect as our revenues would decrease and we would incur net losses as a result of sales of the product, if any sales could be made. Because of our business, the dates on which customers need and require shipments of our security products from us are critical.

IF WE NEED TO REPLACE MANUFACTURERS, OUR EXPENSES COULD INCREASE RESULTING IN SMALLER PROFIT MARGINS

We compete with other companies for the production capacity of our manufacturers and import quota capacity. Some of these competitors have greater financial and other resources than we have, and thus may have an advantage in the competition for production and import quota capacity. If we experience a significant increase in demand, or if an existing manufacturer of ours must be replaced, we may have to expand our third-party manufacturing capacity. We cannot assure you that this additional capacity will be available when required on terms that are acceptable to us or similar to existing terms which we have with our manufacturers, either from a production standpoint or a financial standpoint. We do not have long-term contracts with any manufacturer. None of the manufacturers we use produces our products exclusively.

5

Should we be forced to replace one or more of our manufacturers, we may experience an adverse financial impact, or an adverse operational impact, such as being forced to pay increased costs for such replacement manufacturing or delays upon distribution and delivery of our products to our customers, which could cause us to lose customers or lose revenues because of late shipments.

IF A MANUFACTURER OF OURS FAILS TO USE ACCEPTABLE LABOR PRACTICES, WE MIGHT HAVE DELAYS IN SHIPMENTS OR FACE JOINT LIABILITY FOR VIOLATIONS, RESULTING IN DECREASED REVENUE AND INCREASED EXPENSES

While we require our independent manufacturers to operate in compliance with applicable laws and regulations, we have no control over the ultimate actions of our independent manufacturers. While our internal and vendor operating guidelines promote ethical business practices and our staff and buying agents periodically visit and monitor the operations of our independent manufacturers, we do not control these manufacturers or their labor practices. The violation of labor or other laws by an independent manufacturer of ours, or by one of our licensing partners, or the divergence of an independent manufacturer's or licensing partner's labor practices from those generally accepted as ethical in the United States, could interrupt, or otherwise disrupt the shipment of finished products to us or damage our reputation. Any of these, in turn, could have a material adverse effect on our financial condition and results of operations, such as the loss of potential revenue and incurring additional expenses.

THE FAILURE TO MANAGE OUR GROWTH IN OPERATIONS AND ACQUISITIONS OF NEW PRODUCT LINES AND NEW BUSINESSES COULD HAVE A MATERIAL ADVERSE EFFECT ON US.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

The expected growth of our operations (as to which no representation can be made) will place a significant strain on our current management resources. To manage this expected growth, we will need to improve our:

- o operations and financial systems;
- o procedures and controls; and
- o training and management of our employees.

Our future growth may be attributable to acquisitions of and new product lines and new businesses. We expect that future acquisitions, if successfully consummated, will create increased working capital requirements, which will likely precede by several months any material contribution of an acquisition to our net income.

Our failure to manage growth or future acquisitions successfully could seriously harm our operating results. Also, acquisition costs could cause our quarterly operating results to vary significantly. Furthermore, our stockholders would be diluted if we financed the acquisitions by incurring convertible debt or issuing securities.

Although we currently only have operations within the United States, if we were to acquire an international operation; we will face additional risks, including:

- o difficulties in staffing, managing and integrating international operations due to language, cultural or other differences;
- o Different or conflicting regulatory or legal requirements;
- o foreign currency fluctuations; and
- o diversion of significant time and attention of our management.

IF WE ARE UNABLE TO RETAIN THE SERVICES OF MESSRS. HUTCHISON, BROCKLESBY, BOTASH OR KLEMM, OR IF WE ARE UNABLE TO SUCCESSFULLY RECRUIT QUALIFIED MANAGERIAL AND SALES PERSONNEL HAVING EXPERIENCE IN BUSINESS, WE MAY NOT BE ABLE TO CONTINUE OUR OPERATIONS.

Our success depends to a significant extent upon the continued service of Mr. Rob Hutchison, our Chief Executive Officer, Mr. Peter Brocklesby, our President, Mr. Adrian Botash, our Chief Marketing Officer and Ms. Karin Klemm, our Chief Operating Officer and Interim Chief Financial Officer. We do not have employment agreements with Messrs. Hutchison, Brocklesby, Botash or Klemm. Loss

6

of the services of Messrs. Hutchison, Brocklesby, Botash or Klemm could have a material adverse effect on our growth, revenues, and prospective business. We do not maintain key-man insurance on the life of Messrs. Hutchison, Brocklesby, Botash or Klemm. Besides Mr. Hutchison's desire to retire within the next few months, we are not aware of any other named executive officer or director who has plans to leave us or retire. In addition, in order to successfully implement and manage our business plan, we will be dependent upon, among other things, successfully recruiting qualified managerial and sales personnel having experience in business. Competition for qualified individuals is intense. There can be no assurance that we will be able to find, attract and retain existing employees or that we will be able to find, attract and retain qualified personnel on acceptable terms.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

FAILURE TO ATTRACT AND RETAIN QUALIFIED SCIENTIFIC OR PRODUCTION PERSONNEL COULD HAVE A MATERIAL ADVERSE EFFECT ON US.

Recruiting and retaining qualified scientific and production personnel to perform research and development work and product manufacturing is critical to our success. Because the industry in which we compete is very competitive, we face significant challenges attracting and retaining a qualified personnel base. Although we believe we have been and will be able to attract and retain these personnel, there is no assurance that we will be able to continue to successfully attract qualified personnel. In addition, our anticipated growth and expansion into areas and activities requiring additional expertise, such as clinical testing, government approvals, production, and marketing will require the addition of new management personnel and the development of additional expertise by existing management personnel. The failure to attract and retain these personnel or, alternatively, to develop this expertise internally would adversely affect our business as our ability to conduct research and development will be reduced or eliminated, resulting in fewer or no products for sale and lower revenues. We generally do not enter into employment agreements requiring these employees to continue in our employment for any period of time.

WE NEED TO EXPAND OUR SALES AND SUPPORT ORGANIZATIONS TO INCREASE MARKET ACCEPTANCE OF OUR PRODUCTS.

We currently have a small customer service and support organization and will need to increase our staff to support new customers and the expanding needs of existing customers. The employment market for sales personnel, and customer service and support personnel in this industry is very competitive, and we may not be able to hire the kind and number of sales personnel, customer service and support personnel we are targeting. Our inability to hire qualified sales, customer service and support personnel may materially adversely affect our business, operating results and financial condition.

THE BIOMEDICAL RESEARCH PRODUCTS INDUSTRY IS VERY COMPETITIVE, AND WE MAY BE UNABLE TO CONTINUE TO COMPETE EFFECTIVELY IN THIS INDUSTRY IN THE FUTURE.

We are engaged in a segment of the biomedical research products industry that is highly competitive. We compete with many other suppliers and new competitors continue to enter the market. Many of our competitors, both in the United States and elsewhere, are major pharmaceutical, chemical and biotechnology companies, and many of them have substantially greater capital resources, marketing experience, research and development staff, and facilities than we do. Any of these companies could succeed in developing products that are more effective than the products that we have or may develop and may be more successful than us in producing and marketing their products. It is impossible to quantify the number of competitors since they include both the companies we attempt to sell our products and services to through their use of internal security and various other security product companies. Some of the anti-counterfeiting and fraud protection competitors that we are aware of include: Authentix, InkSure, DNA Technologies, Inc., Art Guard International, Theft Protection Systems, Tracetag and November AG. Although it is impossible to determine the total market size and market data information because companies are secretive about what security methods they utilize and how much they spend on such measures, we have determined that annual sales by some of our competitors have been as follows:

Authentix -	\$4.7 million
Inksure -	\$2.0 million
DNA Technologies, Inc. -	\$26 million
Suretrace -	\$4.3 million
November AG -	\$7 million

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

We expect this competition to continue and intensify in the future. Competition in our markets is primarily driven by:

- o Product performance, features and liability;
- o Price;
- o Timing of product introductions;
- o Ability to develop, maintain and protect proprietary products and technologies;
- o Sales and distribution capabilities;
- o Technical support and service;
- o Brand loyalty;
- o Applications support; and
- o Breadth of product line.

If a competitor develops superior technology or cost-effective alternatives to our products, our business, financial condition and results of operations could be materially adversely affected.

OUR TRADEMARK AND OTHER INTELLECTUAL PROPERTY RIGHTS MAY NOT BE ADEQUATELY PROTECTED OUTSIDE THE UNITED STATES, RESULTING IN LOSS OF REVENUE.

We believe that our trademarks, whether licensed or owned by us, and other proprietary rights are important to our success and our competitive position. In the course of our international expansion, we may, however, experience conflict with various third parties who acquire or claim ownership rights in certain trademarks. We cannot assure that the actions we have taken to establish and protect these trademarks and other proprietary rights will be adequate to prevent imitation of our products by others or to prevent others from seeking to block sales of our products as a violation of the trademarks and proprietary rights of others. Also, we cannot assure you that others will not assert rights in, or ownership of, trademarks and other proprietary rights of ours or that we will be able to successfully resolve these types of conflicts to our satisfaction. In addition, the laws of certain foreign countries may not protect proprietary rights to the same extent, as do the laws of the United States.

INTELLECTUAL PROPERTY LITIGATION COULD HARM OUR BUSINESS.

Litigation regarding patents and other intellectual property rights is extensive in the biotechnology industry. In the event of an intellectual property dispute, we may be forced to litigate. This litigation could involve proceedings instituted by the U.S. Patent and Trademark Office or the International Trade Commission, as well as proceedings brought directly by affected third parties. Intellectual property litigation can be extremely expensive, and these expenses, as well as the consequences should we not prevail, could seriously harm our business.

If a third party claims an intellectual property right to technology we use, we might need to discontinue an important product or product line, alter our products and processes, pay license fees or cease our affected business activities. Although we might under these circumstances attempt to obtain a license to this intellectual property, we may not be able to do so on favorable terms, or at all. We are currently not aware of any intellectual property rights that are being infringed nor have we received notice from a third party that we may be infringing on any of their patents.

Furthermore, a third party may claim that we are using inventions covered by the third party's patent rights and may go to court to stop us from engaging in our normal operations and activities, including making or selling our product candidates. These lawsuits are costly and could affect our results of operations and divert the attention of managerial and technical personnel. There is a risk that a court would decide that we are infringing the third party's patents and

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

would order us to stop the activities covered by the patents. In addition, there is a risk that a court will order us to pay the other party damages for having violated the other party's patents. The biotechnology industry has produced a proliferation of patents, and it is not always clear to industry participants, including us, which patents cover various types of products or methods of use. The coverage of patents is subject to interpretation by the courts, and the interpretation is not always uniform. If we are sued for patent infringement, we would need to demonstrate that our products or methods of use either do not infringe the patent claims of the relevant patent and/or that the patent claims are invalid, and we may not be able to do this. Proving invalidity, in

8

particular, is difficult since it requires a showing of clear and convincing evidence to overcome the presumption of validity enjoyed by issued patents.

Because some patent applications in the United States may be maintained in secrecy until the patents are issued, because patent applications in the United States and many foreign jurisdictions are typically not published until eighteen months after filing, and because publications in the scientific literature often lag behind actual discoveries, we cannot be certain that others have not filed patent applications for technology covered by our licensors' issued patents or our pending applications or our licensors' pending applications or that we or our licensors were the first to invent the technology. Our competitors may have filed, and may in the future file, patent applications covering technology similar to ours. Any such patent application may have priority over our or our licensors' patent applications and could further require us to obtain rights to issued patents covering such technologies. If another party has filed a United States patent application on inventions similar to ours, we may have to participate in an interference proceeding declared by the United States Patent and Trademark Office to determine priority of invention in the United States. The costs of these proceedings could be substantial, and it is possible that such efforts would be unsuccessful, resulting in a loss of our United States patent position with respect to such inventions.

Some of our competitors may be able to sustain the costs of complex patent litigation more effectively than we can because they have substantially greater resources. In addition, any uncertainties resulting from the initiation and continuation of any litigation could have a material adverse effect on our ability to raise the funds necessary to continue our operations.

ACCIDENTS RELATED TO HAZARDOUS MATERIALS COULD ADVERSELY AFFECT OUR BUSINESS.

Some of our operations require the controlled use of hazardous materials. Although we believe our safety procedures comply with the standards prescribed by federal, state, local and foreign regulations, the risk of accidental contamination of property or injury to individuals from these materials cannot be completely eliminated. In the event of an accident, we could be liable for any damages that result, which could seriously damage our business and results of operations.

POTENTIAL PRODUCT LIABILITY CLAIMS COULD AFFECT OUR EARNINGS AND FINANCIAL CONDITION.

We face a potential risk of liability claims based on our products and services, and we have faced such claims in the past. We currently do not have any product liability coverage but are attempting to obtain coverage which we will believe to be adequate. We cannot assure, however, that we will be able to obtain or maintain this insurance at reasonable cost and on reasonable terms. We also cannot assure that this insurance, if obtained, will be adequate to protect us against a product liability claim, should one arise. In the event that a product liability claim is successfully brought against us, it could result in a

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

significant decrease in our liquidity or assets, which could result in the reduction or termination of our business.

### RISKS RELATING TO OUR COMMON STOCK:

THERE ARE A LARGE NUMBER OF SHARES UNDERLYING OUR WARRANTS THAT MAY BE AVAILABLE FOR FUTURE SALE AND THE SALE OF THESE SHARES MAY DEPRESS THE MARKET PRICE OF OUR COMMON STOCK AND WILL CAUSE IMMEDIATE AND SUBSTANTIAL DILUTION TO OUR EXISTING STOCKHOLDERS.

As of June 14, 2005, we had 65,856,025 shares of common stock issued and outstanding and outstanding warrants to purchase 20,367,000 shares of common stock. All of the shares issuable upon exercise of our warrants may be sold without restriction. The sale of these shares may adversely affect the market price of our common stock. The issuance of shares upon exercise of warrants will cause immediate and substantial dilution to the interests of other stockholders since the selling stockholders may convert and sell the full amount issuable on exercise.

IF WE FAIL TO REMAIN CURRENT ON OUR REPORTING REQUIREMENTS, WE COULD BE REMOVED FROM THE OTC BULLETIN BOARD WHICH WOULD LIMIT THE ABILITY OF BROKER-DEALERS TO SELL OUR SECURITIES AND THE ABILITY OF STOCKHOLDERS TO SELL THEIR SECURITIES IN THE SECONDARY MARKET.

9

Companies trading on the OTC Bulletin Board, such as us, must be reporting issuers under Section 12 of the Securities Exchange Act of 1934, as amended, and must be current in their reports under Section 13, in order to maintain price quotation privileges on the OTC Bulletin Board. If we fail to remain current on our reporting requirements, we could be removed from the OTC Bulletin Board. As a result, the market liquidity for our securities could be severely adversely affected by limiting the ability of broker-dealers to sell our securities and the ability of stockholders to sell their securities in the secondary market. Prior to May 2001 and new management, we were delinquent in our reporting requirements, having failed to file our quarterly and annual reports for the years ended 1998 - 2000 (except the quarterly reports for the first two quarters of 1999). We have been current in our reporting requirements for the last three years, however, there can be no assurance that in the future we will always be current in our reporting requirements.

OUR COMMON STOCK IS SUBJECT TO THE "PENNY STOCK" RULES OF THE SEC AND THE TRADING MARKET IN OUR SECURITIES IS LIMITED, WHICH MAKES TRANSACTIONS IN OUR STOCK CUMBERSOME AND MAY REDUCE THE VALUE OF AN INVESTMENT IN OUR STOCK.

The Securities and Exchange Commission has adopted Rule 15g-9 which establishes the definition of a "penny stock," for the purposes relevant to us, as any equity security that has a market price of less than \$5.00 per share or with an exercise price of less than \$5.00 per share, subject to certain exceptions. For any transaction involving a penny stock, unless exempt, the rules require:

- o that a broker or dealer approve a person's account for transactions in penny stocks; and
- o the broker or dealer receive from the investor a written agreement to the transaction, setting forth the identity and quantity of the penny stock to be purchased.

In order to approve a person's account for transactions in penny stocks, the broker or dealer must:

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

- o obtain financial information and investment experience objectives of the person; and
- o make a reasonable determination that the transactions in penny stocks are suitable for that person and the person has sufficient knowledge and experience in financial matters to be capable of evaluating the risks of transactions in penny stocks.

The broker or dealer must also deliver, prior to any transaction in a penny stock, a disclosure schedule prescribed by the Commission relating to the penny stock market, which, in highlight form:

- o sets forth the basis on which the broker or dealer made the suitability determination; and
- o that the broker or dealer received a signed, written agreement from the investor prior to the transaction.

Generally, brokers may be less willing to execute transactions in securities subject to the "penny stock" rules. This may make it more difficult for investors to dispose of our common stock and cause a decline in the market value of our stock.

Disclosure also has to be made about the risks of investing in penny stocks in both public offerings and in secondary trading and about the commissions payable to both the broker-dealer and the registered representative, current quotations for the securities and the rights and remedies available to an investor in cases of fraud in penny stock transactions. Finally, monthly statements have to be sent disclosing recent price information for the penny stock held in the account and information on the limited market in penny stocks.

10

### USE OF PROCEEDS

This prospectus relates to shares of our common stock that may be offered and sold from time to time by the selling stockholders. We will not receive any proceeds from the sale of shares of common stock in this offering. However, we will receive the sale price of any common stock we sell to the selling stockholders upon exercise of the warrants. We expect to use the proceeds received from the exercise of the warrants, if any, for general working capital purposes.

### MARKET FOR COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our Common Stock is traded over-the-counter on the Over the Counter Bulletin Board maintained by the National Association of Securities Dealers under the symbol "APDN". There is no certainty assurance that the Common Stock will continue to be quoted or that any liquidity exists for our shareholders.

The following table sets forth the quarterly quotes of high and low prices for our Common Stock on the OTC Bulletin Board during the fiscal years September 30, 2003 and September 30, 2004. In February of 2003, we changed our year end to September 30. We changed our fiscal year end in connection with a reverse merger we entered into in December 2002, in which the acquirer for accounting purposes had a fiscal year end of September 30. For ease of fiscal reporting, we adopted the same fiscal year end.

Year ended 9/30/03*	High	Low
December 31, 2002	\$2.55	\$0.02
March 31, 2003	\$2.85	\$2.00

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

June 30, 2003	\$2.85	\$2.25
September 30, 2003	\$2.80	\$2.40
Year ended 9/30/04	High	Low
December 31, 2003	\$3.54	\$2.45
March 31, 2004	\$3.55	\$1.51
June 30, 2004	\$2.55	\$0.71
September 30, 2004	\$0.96	\$0.43
Year ended 9/30/05	High	Low
December 31, 2004	\$2.39	\$0.42
March 31, 2005	\$1.83	\$0.78
June 30, 2005 (1)	\$1.01	\$0.61

(1) As of June 14, 2005.

\* We have disclosed the numbers with years ending on September 30 for comparative purposes. Effective January 31, 2003, we changed our fiscal year from December 31 to September 30.

### HOLDERS

As of June 14, 2005, we had approximately 589 holders of our common stock. The number of record holders was determined from the records of our transfer agent and does not include beneficial owners of common stock whose shares are held in the names of various security brokers, dealers, and registered clearing agencies. The transfer agent of our common stock is American Stock Transfer & Trust Company, 6201 15th Avenue, Brooklyn, New York 11219.

11

We have never declared or paid any cash dividends on our common stock. We do not anticipate paying any cash dividends to stockholders in the foreseeable future. In addition, any future determination to pay cash dividends will be at the discretion of the Board of Directors and will be dependent upon our financial condition, results of operations, capital requirements, and such other factors as the Board of Directors deem relevant.

### EQUITY COMPENSATION PLAN INFORMATION

#### STOCK OPTION PLAN

In November of 2002, we created a special compensation plan to pay the founders, consultants and professionals that had been contributing valuable services to us during the previous nine months. The plan is called the Professional/Employee/Consultant Compensation Plan. Share and option issuances from the Compensation Plan were to be staggered over the following six to eight months, and consultants that were to continue providing services thereafter either became employees or received renewed contracts from us in July of 2003, which contracts contained a more traditional cash compensation component. The Compensation Plan was designed by the Board to meet our important team building objectives in our early stages, and to be temporary. As of December 31, 2004, a total of 1,440,003 shares have been issued from the Compensation Plan and 560,000 options, 264,000 of which were exercised as of as of December 31, 2004.

Each qualified and eligible recipient of shares and/or options under the Compensation Plan received securities in lieu of cash payment for services. Each recipient agreed, in his or her respective consulting contract with us, to sell a limited number of shares monthly. We feel that this carefully designed

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

Compensation Plan was successful in attracting and retaining a strong team at a time when we had no established revenue stream and limited or no outside financing.

In our financial statements, shares that were issued from November 2002 through June 30, 2003 that were valued at \$0.065 per share were shares issued from this Compensation Plan created in November of 2002 on the basis of contracts executed at that time for previously rendered services. Common Stock disclosed as being issued in exchange for cash at \$1.00 per share represents options that were exercised under this Plan. In December of 2004, we adjusted the exercise price to \$0.60 per share.

Any other unrestricted shares that were issued either before or after July 1, 2003 were valued at the fair market value.

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights	Weighted Average Exercise Price of Outstanding Options, Warrants and Rights	Number of Shares Remaining Available for Future Issuance
	(a)	(b)	(c)
Professional/Consultant/ Employee Stock and Stock Option Compensation Plan	2,000,000	\$177,600	-0-
<b>Total</b>	<b>2,000,000</b>	<b>\$177,600</b>	<b>-0-</b>

As of December 31, 2004, a total of 1,440,000 shares have been issued from the Compensation Plan and 560,000 options have been issued, 264,000 of which were exercised as of that date.

On January 26, 2005, the majority stockholders approved the 2005 Stock Incentive Plan and authorized 16,000,000 shares of Common Stock for issuance of stock awards and stock options thereunder. We filed a preliminary information statement with the Securities and Exchange Commission on February 3, 2005 containing the information on the 2005 Stock Incentive Plan, which shall become effective 20 days after the mailing of the definitive information statement.

12

### MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND PLAN OF OPERATIONS

Some of the information in this Form SB-2 contains forward-looking statements that involve substantial risks and uncertainties. You can identify these statements by forward-looking words such as "may," "will," "expect," "anticipate," "believe," "estimate" and "continue," or similar words. You should read statements that contain these words carefully because they:

- o discuss our future expectations;
- o contain projections of our future results of operations or of our financial condition; and
- o state other "forward-looking" information.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

We believe it is important to communicate our expectations. However, there may be events in the future that we are not able to accurately predict or over which we have no control. Our actual results and the timing of certain events could differ materially from those anticipated in these forward-looking statements as a result of certain factors, including those set forth under "Risk Factors," "Business" and elsewhere in this prospectus. See "Risk Factors."

### PLAN OF OPERATIONS

#### BUSINESS STRATEGY AND APPROACH

We have established integrated business operations addressing and servicing the needs of the global security marketplace on the part of corporations and governments for; anti-counterfeiting, fraud prevention, product authentication, brand protection, supply chain management and protection.

#### INTELLECTUAL PROPERTY DEVELOPMENT, PRODUCT OPERATIONS & Partnerships

We have proprietary DNA security technology, and develop security solutions that protect corporate and intellectual property from counterfeiting, fraud, piracy and product diversion using botanical DNA as an encrypted/code molecule that can be embedded in inks, paper, substrates, liquids, textiles, thread, plastics, holograms and microchips.

We produce security solutions customized to our customer's needs. We market and sell DNA anti-counterfeit and fraud prevention solutions that integrate into, and layer with, existing security solutions. These DNA security features are integrated at the original equipment manufacturer level with ink, paper, liquids, thread and hologram producers, who in turn sell/supply finished security products such as primary and secondary product packaging for pharmaceuticals, beauty products, textiles, currency, passports, ID cards, etc. We have strict protocols for specifying, integrating, testing, shipping and confirming the presence of DNA in any given product. We believe that we use highly reputable outside labs to provide independent third party validation testing to assure maximum quality control, objectivity and strict security procedures in handling and shipping. The outside lab we use for the validation testing is the Idaho National Laboratory, a part of the U.S. National Laboratory System. No compromise can enter the security chain of our product(s).

We plan to develop new product lines that will address specific new challenges in the security marketplace, and bring these advances to target industries, customers and countries.

Additionally, we will identify strategic partnerships and co-marketing ventures, and licensees to work with us to develop, market and sell our biotechnological security products. This will include sub-licensing the technology to key partners in specific sectors with an established base of customers. These partners will be able to enhance their product lines and client services by adding our technology to the existing security matrix in their products, providing an enhanced solution to deter fraud and counterfeiting.

13

#### CONSULTANT & ENFORCEMENT OPERATIONS

We will consult with our clients on a total security service offering; how to protect their brands, intellectual property, products and physical security access and how to reduce risk exposure, product liability exposure and product recall liabilities. We plan to offer worldwide DNA analysis services supporting the authentication of products and the detection, interdiction, deterrence and prosecution of counterfeiters and related crimes, through our subcontractors,

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

sub-licensees and security industry collaborative partners.

### INTERNATIONAL SUB-LICENSE OPERATIONS

This division will oversee the activities of all international sub-licensees and partnerships. This division will also develop a corporate policy for all marketing and promotional activities.

We intend to establish alliances with existing anti-counterfeit experts, agencies and companies in each market. This collaborative security consortium will employ DNA technology to detect illegal activities, counterfeiting and fraud, and provide a high standard in security for corporations and government agencies.

These operations will provide multiple security solutions. Each sub-licensee or collaborative partnership will produce separate revenue streams and be operational via integrated organizational structures.

Our management and advisory board and strategic consultants have the knowledge, experience, contacts and skills to provide a comprehensive DNA security business, with advanced anti-counterfeit and fraud prevention systems for the protection and tracking of currency, documents, consumer products, and intellectual property.

Strong Security Knowledge Base -- Our executives and consultants have the requisite experience to provide solutions that address the security needs of major companies in such diverse markets as pharmaceuticals, automotive, cosmetics, apparel and accessories, aerospace, luxury goods, among others.

Developing Technology - We plan to acquire all rights, title and interest in all patents, patents pending, developing, DNA anti-counterfeit, and fraud prevention technologies created by Biowell. We also have an in-depth understanding of DNA microchip design and applications. We will jointly develop DNA-holograms and DNA-Hologram-RFID devices, DNA-inks, DNA-dyes and DNA-security labels with leading OEM's in these specialist fields.

Strategic Corporate Relationships - Our management has personal and corporate relationships with leaders in key industries such as: pharmaceuticals, cosmetics/beauty, fashion, retail, computers, entertainment, automobiles, petroleum, fine arts and collectibles.

We will utilize our existing relationships and develop new ones to introduce our anti-counterfeiting technology to generate business. Each industry has unique requirements and needs for their anti-counterfeit solutions, and we believe our DNA technology will provide maximum security technologies. For example, our smart packaging solutions with DNA security markers in ink, paper and holograms has widespread application in packaging for pharmaceuticals, cosmetics, automotive markets, passports, ID's and currency. Our proprietary technology offers immediate and affordable detection and security for their brands and products.

Strong Technology Alliances - Our technology can also provide advanced security dimensions to:

- o Electronics security: access and physical/plant security (biometric security cards enhanced with DNA)
- o Security Holograms (DNA enhanced)
- o Radio Frequency Identification systems (DNA + RFID)
- o Security papers and printing o Holograms (DNA holograms)
- o Other security-related products and systems

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

Law Enforcement Expertise - The resources of our collaborative partners in the security industry include former federal law enforcement, security, and intelligence officers who provide the company with extensive contacts and hands-on experience in:

- o Intellectual property investigation
- o Counter-intelligence
- o Personal security services
- o Anti-counterfeit technologies
- o Secure communications and data management

### CRITICAL ACCOUNTING POLICIES

The preparation of our consolidated financial statements in conformity with accounting principles generally accepted in the United States requires us to make estimates and judgments that affect our reported assets, liabilities, revenues, and expenses, and the disclosure of contingent assets and liabilities. We base our estimates and judgments on historical experience and on various other assumptions we believe to be reasonable under the circumstances. Future events, however, may differ markedly from our current expectations and assumptions. While there are a number of significant accounting policies affecting our consolidated financial statements; we believe the following critical accounting policy involve the most complex, difficult and subjective estimates and judgments:

- o stock-based compensation

### STOCK-BASED COMPENSATION

In December 2002, the FASB issued SFAS No. 148 - Accounting for Stock-Based Compensation - Transition and Disclosure. This statement amends SFAS No. 123 - Accounting for Stock-Based Compensation, providing alternative methods of voluntarily transitioning to the fair market value based method of accounting for stock based employee compensation. FAS 148 also requires disclosure of the method used to account for stock-based employee compensation and the effect of the method in both the annual and interim financial statements. The provisions of this statement related to transition methods are effective for fiscal years ending after December 15, 2002, while provisions related to disclosure requirements are effective in financial reports for interim periods beginning after December 31, 2003.

We elected to continue to account for stock-based compensation plans using the intrinsic value-based method of accounting prescribed by APB No. 25, "Accounting for Stock Issued to Employees," and related interpretations. Under the provisions of APB No. 25, compensation expense is measured at the grant date for the difference between the fair value of the stock and the exercise price.

From its inception, the Company has incurred significant costs in connection with the issuance of equity-based compensation, which is comprised primarily of our common stock and warrants to acquire our common stock, to non-employees. The Company anticipates continuing to incur such costs in order to conserve its limited financial resources. The determination of the volatility, expected term and other assumptions used to determine the fair value of equity based compensation issued to non-employees under SFAS 123 involves subjective judgment and the consideration of a variety of factors, including our historical stock price, option exercise activity to date and the review of assumptions used by comparable enterprises.

We account for equity based compensation, issued to non-employees in exchange for goods or services, in accordance with the provisions of SFAS No.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

123 and EITF No. 96-18, "Accounting for Equity Instruments That are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services".

### REVENUES

From our inception on September 16, 2002, we have not generated revenues from operations. We believe we will begin generating revenues from operations in the fiscal year as the Company transitions from a development stage enterprise to that of an active growth and acquisition stage company.

15

### COSTS AND EXPENSES

From our inception through March 31, 2005, we have incurred losses of \$48,969,986. These expenses were associated principally with equity-based compensation to employees and consultants, product development costs and professional services. We record the equity-based compensation expense in the period the services are rendered based upon the value of the fair value of our shares issued.

### RECENT ACCOUNTING PRONOUNCEMENTS

In April 2003, the FASB issued Statement of Financial Accounting Standards (SFAS) No. 149, Amendment of Statement No. 133 on Derivative Instruments and Hedging Activities. SFAS 149 amends SFAS No. 133 to provide clarification on the financial accounting and reporting of derivative instruments and hedging activities and requires that contracts with similar characteristics be accounted for on a comparable basis. The provisions of SFAS 149 are effective for contracts entered into or modified after June 30, 2003, and for hedging relationships designated after June 30, 2003. The adoption of SFAS 149 did not have a material impact on the Company's results of operations or financial position.

In May 2003, the FASB issued SFAS No. 150, Accounting for Certain Financial Instruments with Characteristics of Both Liabilities and Equity. SFAS 150 establishes standards on the classification and measurement of certain financial instruments with characteristics of both liabilities and equity. The provisions of SFAS 150 are effective for financial instruments entered into or modified after May 31, 2003 and to all other instruments that exist as of the beginning of the first interim financial reporting period beginning after June 15, 2003. The adoption of SFAS 150 did not have a material impact on the Company's results of operations or financial position.

In December 2003, the FASB issued a revision of SFAS No. 132, "Employers' Disclosures About Pensions And Other Postretirement Benefits." This pronouncement, SFAS No. 132-R, expands employers' disclosures about pension plans and other post-retirement benefits, but does not change the measurement or recognition of such plans required by SFAS No. 87, No. 88, and No. 106. SFAS No. 132-R retains the existing disclosure requirements of SFAS No. 132, and requires certain additional disclosures about defined benefit post-retirement plans. Except as described in the following sentence, SFAS No. 132-R is effective for foreign plans for fiscal years ending after June 15, 2004; after the effective date, restatement for some of the new disclosures is required for earlier annual periods. Some of the interim-period disclosures mandated by SFAS No. 132-R (such as the components of net periodic benefit cost, and certain key assumptions) are effective for foreign plans for quarters beginning after December 15, 2003; other interim-period disclosures will not be required for the Company until the first quarter of 2005. Since the Company does not have any defined benefit post-retirement plans, the adoption of this pronouncement did not have any impact on the Company's results of operations or financial condition.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

In November 2004, the Financial Accounting Standards Board (FASB) issued SFAS 151, Inventory Costs-- an amendment of ARB No. 43, Chapter 4. This Statement amends the guidance in ARB No. 43, Chapter 4, "Inventory Pricing," to clarify the accounting for abnormal amounts of idle facility expense, freight, handling costs, and wasted material (spoilage). Paragraph 5 of ARB 43, Chapter 4, previously stated that ". . . under some circumstances, items such as idle facility expense, excessive spoilage, double freight, and rehandling costs may be so abnormal as to require treatment as current period charges. . . ." This Statement requires that those items be recognized as current-period charges regardless of whether they meet the criterion of "so abnormal." In addition, this Statement requires that allocation of fixed production overheads to the costs of conversion be based on the normal capacity of the production facilities. This Statement is effective for inventory costs incurred during fiscal years beginning after June 15, 2005. Management does not believe the adoption of this Statement will have any immediate material impact on the Company.

In December 2004, the FASB issued SFAS No.152, "Accounting for Real Estate Time-Sharing Transactions--an amendment of FASB Statements No. 66 and 67" ("SFAS 152) The amendments made by Statement 152 This Statement amends FASB Statement No. 66, Accounting for Sales of Real Estate, to reference the financial accounting and reporting guidance for real estate time-sharing transactions that is provided in AICPA Statement of Position (SOP) 04-2, Accounting for Real Estate Time-Sharing Transactions. This Statement also amends FASB Statement No.

16

67, Accounting for Costs and Initial Rental Operations of Real Estate Projects, to state that the guidance for (a) incidental operations and (b) costs incurred to sell real estate projects does not apply to real estate time-sharing transactions. The accounting for those operations and costs is subject to the guidance in SOP 04-2. This Statement is effective for financial statements for fiscal years beginning after June 15, 2005. with earlier application encouraged. The Company does not anticipate that the implementation of this standard will have a material impact on its financial position, results of operations or cash flows.

On December 16, 2004, the Financial Accounting Standards Board ("FASB") published Statement of Financial Accounting Standards No. 123 (Revised 2004), Share-Based Payment ("SFAS 123R"). SFAS 123R requires that compensation cost related to share-based payment transactions be recognized in the financial statements. Share-based payment transactions within the scope of SFAS 123R include stock options, restricted stock plans, performance-based awards, stock appreciation rights, and employee share purchase plans. The provisions of SFAS 123R are effective as of the first interim period that begins after June 15, 2005. Accordingly, the Company will implement the revised standard in the third quarter of fiscal year 2005. Currently, the Company accounts for its share-based payment transactions under the provisions of APB 25, which does not necessarily require the recognition of compensation cost in the financial statements. Management is assessing the implications of this revised standard, which may materially impact the Company's results of operations in the third quarter of fiscal year 2005 and thereafter.

On December 16, 2004, FASB issued Statement of Financial Accounting Standards No. 153, Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29, Accounting for Non-monetary Transactions (" SFAS 153"). This statement amends APB Opinion 29 to eliminate the exception for non-monetary exchanges of similar productive assets and replaces it with a general exception for exchanges

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

of non-monetary assets that do not have commercial substance. Under SFAS 153, if a non-monetary exchange of similar productive assets meets a commercial-substance criterion and fair value is determinable, the transaction must be accounted for at fair value resulting in recognition of any gain or loss. SFAS 153 is effective for non-monetary transactions in fiscal periods that begin after June 15, 2005. The Company does not anticipate that the implementation of this standard will have a material impact on its financial position, results of operations or cash flows.

### LIQUIDITY AND CAPITAL RESOURCES

As of March 31, 2005, we had working capital of \$682,834. For the six months ended March 31, 2005, we generated a net cash flow deficit from operating activities of (\$5,312,817).

Cash used in investing activities totaled \$28,288, which was utilized for patent filings and, facility lease deposits. Cash provided by financing activities totaled \$8,314,300

We expect capital expenditures to be nominal for fiscal 2005. These anticipated expenditures are for continued investments in property and equipment used in our business.

While we have raised capital to meet our working capital and financing needs in the past, additional financing is required within the next 12 months in order to meet our current and projected cash flow deficits from operations and development. We have sufficient funds to conduct our operations for several months, but not for 12 months or more. There can be no assurance that financing will be available in amounts or on terms acceptable to us, if at all.

By adjusting our operations and development to the level of capitalization, we believe we have sufficient capital resources to meet projected cash flow deficits. However, if during that period or thereafter, we are not successful in generating sufficient liquidity from operations or in raising sufficient capital resources, on terms acceptable to us, this could have a material adverse effect on our business, results of operations liquidity and financial condition.

Our registered independent certified public accountants have stated in their report dated January 11, 2005, that we have incurred operating losses in the last two years, and that we are dependent upon management's ability to develop profitable operations. These factors among others may raise substantial doubt about our ability to continue as a going concern.

To obtain funding for our ongoing operations, we sold \$1,465,000 in convertible promissory notes to 13 investors in December 2004. Each promissory

17

note was automatically convertible into shares of our common stock, at a price of \$0.50 per share, upon the closing of a private placement for \$1 million or more. On January 28, 2005, we closed upon a private placement transaction in excess of \$1 million, and on February 2, 2005, the promissory notes were converted into an aggregate of 2,930,000 shares of common stock. This prospectus includes the resale of the common stock issued upon conversion of the promissory notes. In connection with the sale of the convertible promissory notes, we issued 2,930,000 warrants to purchase shares of common stock. The warrants are exercisable until three years from the date of issuance at a purchase price of \$0.75 per share.

To obtain funding for our ongoing operations, we conducted a private placement offering in January and February 2005, in which we sold \$7,371,000 of 10% Secured Convertible Promissory Notes to 61 investors. The 10% Secured

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

Convertible Promissory Notes automatically convert into shares of our common stock, at a price of \$0.50 per share, upon the filing of this registration statement. This prospectus includes the resale of the common stock to be issued upon conversion of the 10% Secured Convertible Promissory Notes. In connection with the private placement offering, we have issued 15,242,000 warrants. The warrants are exercisable until five years from the date of issuance at a purchase price of \$0.75 per share.

Since the conversion price will be less than the market price of the common stock at the time the secured convertible notes are issued, we anticipate recognizing a charge relating to the beneficial conversion feature of the secured convertible notes during the quarter in which they are issued, including the first quarter of fiscal 2005 when \$1,465,000 of secured convertible notes were issued and the second quarter of fiscal 2005 when \$7,361,000 of secured convertible notes were issued.

We will still need additional investments in order to continue operations to cash flow break even. Additional investments are being sought, but we cannot guarantee that we will be able to obtain such investments. Financing transactions may include the issuance of equity or debt securities, obtaining credit facilities, or other financing mechanisms. However, the trading price of our common stock and the downturn in the U.S. stock and debt markets could make it more difficult to obtain financing through the issuance of equity or debt securities. Even if we are able to raise the funds required, it is possible that we could incur unexpected costs and expenses, fail to collect significant amounts owed to us, or experience unexpected cash requirements that would force us to seek alternative financing. Further, if we issue additional equity or debt securities, stockholders may experience additional dilution or the new equity securities may have rights, preferences or privileges senior to those of existing holders of our common stock. If additional financing is not available or is not available on acceptable terms, we will have to curtail our operations.

18

### BUSINESS

#### HISTORY

We are a Nevada corporation, which was initially formed under the laws of the state of Florida as Datalink Systems, Inc. in 1983. We changed names and then was redomesticated to Nevada in 1998, and in 1999, became ProHealth Medical Technologies, Inc. In November of 2002, we changed our corporation name to Applied DNA Sciences, Inc. in connection with a reverse merger. As a result of the reverse merger, we changed our business to that of our acquirer, which involves researching, developing and selling security and anti-counterfeiting products that utilize plant DNA for verification purposes. During this time, most of our efforts have been focused on research and development and the execution of an exclusive license, as described further herein.

#### OVERVIEW

We are a provider of proprietary DNA-embedded biotechnology security products that protect corporate and intellectual property from counterfeiting, fraud, piracy, product diversion and unauthorized intrusion. We offer a cost effective method to detect, deter, interdict and prosecute counterfeiting enterprises. We provide proprietary DNA-embedded biotechnology solutions to companies to protect corporate and intellectual property from counterfeiting, fraud, piracy, product diversion and unauthorized intrusion. We use segments of naturally occurring botanical DNA that have unique characteristics, which are one-of-a-kind sequences. Using various anti-counterfeit mediums, or substrates, such as ink, microchips, glue, paints and holograms, we can authenticate the

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

unique DNA characters to ensure that the product has not been counterfeited or tampered with.

Sectors of commerce that could benefit from our products include: corporations, federal government agencies, information technology, security and surveillance, entertainment media, the arts, cosmetics, pharmaceutical and biometrics, as well as vertical retail markets. Our applications can also enhance capabilities of product origination, identification verification, and validation of the source of components for critical manufacturing, defense, medical and other highly-integrity or secure products.

Our mission is to become the recognized standard in providing total security solutions to protect corporate and intellectual property from counterfeiting and fraud. We intend to deliver our products to a global market via existing and emerging strategic business development agreements with recognized leaders in the security industry and through collaborations with leading security consultancy companies.

We have acquired the exclusive license to sell, market, and sub-license all of Biowell Technology, Inc's DNA anti-counterfeit and fraud prevention biotechnology and products in North America (U.S. and Canada), Latin America and Europe. Biowell Technology Inc. is a Taiwan company, formed in October 1999, with its headquarters in Chung-Ho City, Taiwan and currently has over 600 shareholders, with no shareholder holding 20% or more of the outstanding shares. To date, Biowell products have only been offered within Asia, with limited sales made. The exclusive license also gives us the initial rights to future biotechnologies developed by Biowell and also new applications for the existing technology that may be developed for the marketplace. Biowell has selected us to be its marketing and licensing partner to introduce the DNA biotechnology products to the world's largest consumer markets. In addition to marketing the DNA products in our territories, we will develop DNA production laboratories in the United States, as well as develop capabilities in DNA authentication, analysis and detection products with ongoing relationships with the Department of Energy's national laboratory system.

We believe that we have a very seasoned and experienced management team. This was a key factor in establishing the partnership with Biowell. Our combined executive team has extensive professional experience in the areas of anti-counterfeiting technology, microchip development, security, printing, marketing, and corporate sub-licensing development. Lawrence Lee has 10 years of experience in microchip design and anti-counterfeiting technology with Boeing, Hughes and Applied DNA Sciences. Paul Reep, our Chief Technology Officer, has 35 years experience security, energy and aerospace technologies, corporate development and marketing, working for or with Lockheed Martin, the U.S. Department of Energy, U.S. Department of Agriculture, U.S. Department of Defense, Rockwell International, InVision, The National Institute of Justice, Applied DNA Sciences and EG&G. Peter Brocklesby has 20 years experience with security and defense intelligence as an officer in the Royal Air Force and

19

working for e-Systems, Air America and Applied DNA Sciences. Rob Hutchison has 15 years experience with anti-counterfeiting and security, working with eCharge Corporation, Powerhouse Technologies and Applied DNA Sciences. Ron Erickson has 20 years experience in anti-counterfeiting with an emphasis on software piracy with Egghead Software Inc., Globaltel Resources, 2Charge and Applied DNA Sciences. We believe that our management team has also been active in the International Anti-Counterfeiting Coalition, Homeland Security technology communities, and the anti-fraud investigation industry. We have signed an agreement with Holomex to co-own IP created utilizing our technology. In addition, we have research and development agreements with the Department of Energy, United States Department of Agriculture and Department of Defense.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

### LICENSE AGREEMENT WITH BIOWELL TECHNOLOGY

We entered into exclusive license agreement with Biowell in October 2002, which was amended in July 2003. Our territories under the license agreement are the United States, the European Union, Canada, Mexico, Colombia, Saudi Arabia and the United Arab Emirates. It has an initial term of five years with an automatic ten-year renewal upon the meeting of certain minimum-guarantee objectives. Thereafter, the license is renewable for successive three-year terms upon the successful completion of certain minimum-guarantee objectives.

The minimum guarantees that we must meet each year of the license agreement to retain the exclusive license for the technologies are as follows:

YEAR	MINIMUM GUARANTEE
1st year	\$50,000 gross purchase orders or payment of \$25,000
2nd year	\$300,000 gross purchase orders or payment of \$50,000
3rd year	\$360,000 gross purchase orders
4th year	\$432,000 gross purchase orders
5th year	\$518,400 gross purchase orders

The minimum guarantee payment requirement has been suspended by Biowell. In consideration for the granting of the exclusive license to us, Biowell received 1.5 million shares of our common stock, with the option to purchase another 500,000 shares. In return, we received the option to purchase 500,000 shares of Biowell common stock. We have not exercised the option to purchase the Biowell shares.

The license agreement may be terminated by Biowell if:

- 1) we sell, assign, attempt to sell or assign, or cease to carry on our business;
- 2) we fail to make the minimum payment guarantees;
- 3) there is a change in control of our company;
- 4) we become insolvent, commence bankruptcy proceedings or make an assignment for the benefit of creditors; or
- 5) upon 60 days written notice of a breach of a material obligation, such breach is not cured.

In the event that we fail to make the minimum payment guarantees or we are unable to cure a breach within the 60 day period, we have the option, in our sole discretion, prior to termination by Biowell, including during any time when we are in breach of this agreement, to elect to change the agreement whereby we are a non-exclusive manufacturer in our territories.

In connection with our contemplated acquisition of Biowell's technology, as described below in greater detail, Biowell and we have agreed to suspend all payments due or to become due under the license agreement have been suspended, pursuant to a letter agreement, dated November 2, 2004. The fees have been suspended in contemplation of the acquisition and will become due and payable if the acquisition is terminated.

Under the license, we would submit orders to Biowell and Biowell would fulfill such orders. We would generate income by charging a higher price to our customer than our cost for the goods from Biowell. The aggregate minimum of \$2,000,000 in the first five years was not an indication of the anticipated market for the products. It was a level established in goodwill between the

parties at a minimum level of performance because of the risks, costs and

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

potential problems associated with undertaking a new business product.

### BIOWELL TECHNOLOGY ACQUISITION AGREEMENT

On January 28, 2005, we entered into a stock purchase agreement with Biowell Technology Inc., whereby a to-be-formed wholly-owned subsidiary of the Company would acquire a company to be formed which would own all of the intellectual property of Biowell in exchange for 36,000,000 shares of the Company's common stock to be issued to the shareholders of Biowell. The parties have agreed to amend the agreement, with such amendment to be executed and take effect upon closing, which is scheduled to occur during June 2005.

The closing of the acquisition is subject to numerous terms and conditions, including:

- 1) due diligence review of Biowell's intellectual property by our intellectual property counsel and the issuance of a report and opinion by such counsel satisfactory to us;
- 2) release of encumbrances on the assets to be acquired;
- 3) the formation of and sale of the assets to be acquired from Biowell to a British Virgin Islands company;
- 4) amendments to an agreement between us and Giuliani Partners LLC;
- 5) reorganization of our Board of Directors of the Company;
- 6) formation of a wholly-owned subsidiary of ours in the British Virgin Islands; and
- 7) such other customary representations, warranties and conditions customary to transactions of this nature.

As of the date of this filing, all of the above terms and conditions to closing have occurred except for the approval by the shareholders of Biowell Technology and the reorganization of our board of directors. In connection with the closing, if it occurs, we will reorganize our board to establish the board at seven members, with Biowell having the right to appoint three of the initial seven members.

In the event that the closing has not occurred on or prior to July 31, 2005, either party may terminate the agreement. In addition, the agreement may be terminated by the written consent of both parties or unilaterally by either party upon a material violation or breach by the other party that has not been cured within 10 business days of notice of such violation or breach.

In connection with the closing, the parties will also enter into a license agreement, whereby we will grant Biowell an exclusive license to market and sell our products in selected Asian countries, a consulting agreement with Biowell for the services of key employees of Biowell and non-competition agreements.

In the event that we do not close on the acquisition of the Biowell technology, it is likely that we will lose our license to the technology. We are currently in default of the license agreement for failure to make our royalty payments, although our requirement to make royalty payments has been suspended since November in contemplation of this acquisition. If the acquisition does not occur, we are required to make all royalty payments owed, including those that were suspended, within 30 days of the acquisition being called off.

### SUB-LICENSING AGREEMENT

In July of 2003, Applied DNA, Biowell and G. A. Corporate Finance Ltd. entered into a Sub-License Agreement for the United Kingdom in exchange for \$3,000,000. G. A. Corporate Finance Ltd. paid \$25,000 upon its execution of the Agreement, and the remaining \$2,975,000 is subject to an interest bearing promissory note, payable in twenty (20) consecutive quarterly installments of Principal and Interest in the amount equal to the lower of \$185,937.50 or 35% of

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

Gross Revenues for that quarter due on the final day of the quarter.

The minimum guarantees that G. A. Corporate Finance, LLC must meet each year of the license agreement to retain the exclusive license for the technologies are as follows:

21

YEAR	MINIMUM GUARANTEE
1st year	\$50,000 gross purchase orders
2nd year	\$150,000 gross purchase orders
3rd year	\$300,000 gross purchase orders
4th year	\$360,000 gross purchase orders
5th year	\$432,000 gross purchase orders

Due to the lack of marketable products since execution of this agreement, we suspended the payment under the note and the minimum guarantees owed to us. We are currently in negotiations with this sub-licensee to either amend or terminate this agreement.

As with our Exclusive License Agreement with Biowell, our UK Sub-Licensee will have the opportunity to apply for new product licenses, which can remain exclusive in its territory for the first eighteen months.

### Biowell DNA Technologies

-----

Every living thing has a unique DNA code in its cellular composition. By taking the DNA from a plant material, Biowell is able to create a group of DNA codes that can be turned into a unique and traceable marking for any product.

In the early 1980's the primary emphasis in DNA research was applied to pharmaceutical applications. There was very little focus in the living biotechnology arena. During the 1990's, a group of elite scientists, led by Dr. Sheu Jun-Jei of Taiwan, focused on the first research and development of a DNA based anti-counterfeit biotechnology. In the late 1990's, Dr. Sheu made a major breakthrough in biotechnology, and patents with commercial applications were filed. Biowell was formed in Taiwan in October of 1999 to hold these pending patents and continues to advance in the areas of DNA anti-counterfeiting biotechnology.

The key to this exclusive biotechnology is the ability to mix or attach scientifically selected and processed DNA to specific media such as paint, glue, polymer, and ink. In doing this, the characteristics of DNA are used to distinguish genuine products from counterfeits. This technology can also be used to authenticate microchips and circuit boards that contain them. The DNA AC (anti-counterfeit) biochip is a Biowell product in which DNA is embedded into a microchip. When biochips are embedded into circuitry, the biological data can be read electronically and the component can be authenticated. Without authentication, the device will not operate.

### Intellectual Property

-----

Key to our success is ongoing research and development. Biowell has over 10 patents pending and we have filed two new patent applications. While patents are an important asset, they are not the only instruments used to sequester a competitive position for us. We are developing numerous tools to maintain technical superiority, which includes licensing other component and complementary technologies that will keep pace with our speed to market efforts.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

We regard our trade secrets and other intellectual property as an integral component of our success. We rely on patent law, trademark law, trade secret protection and confidentiality and/or license agreements with employees, customers, partners and others to protect our intellectual property. Effective patent, trademark and trade secret protection may not be available in every country in which our products are available. We cannot be certain that we have taken adequate steps to protect our intellectual property, especially in countries where the laws may not protect our rights as fully as in the United States. In addition, if our third-party confidentiality agreements are breached there may not be an adequate remedy available to us. If our trade secrets become publicly known, we may lose our competitive position.

Additionally, litigation regarding patents and other intellectual property rights is extensive in the biotechnology industry. In the event of an intellectual property dispute, we may be forced to litigate. This litigation could involve proceedings instituted by the U.S. Patent and Trademark Office or the International Trade Commission, as well as proceedings brought directly by affected third parties. Intellectual property litigation can be extremely expensive, and these expenses, as well as the consequences should we not prevail, could seriously harm our business.

22

If a third party claims an intellectual property right to technology we use, we might need to discontinue an important product or product line, alter our products and processes, pay license fees or cease our affected business activities. Although we might under these circumstances attempt to obtain a license to this intellectual property, we may not be able to do so on favorable terms, or at all.

### Global Market Penetration

-----

We have redirected our sales and marketing strategy to place a premium on business-to-business opportunities. In order to effectively service our products globally, we may enter into both exclusive and non-exclusive agreements. Each of these agreements will have time limits and have very specific revenue targets set against them. In the case of an exclusive agreement, we may further limit our relationship to certain products that are offered for sale in a specific region. All exclusive agreements will have time limits with specific targets for revenue to be derived out of a given region. Additionally, we have and will retain the right to allow certain global partners (as we decide from time to time) to sell into a restricted exclusive market with the provision that a fee be paid to the exclusive licensee in a given region for products sold in that region that are covered under their exclusive license. This provision was adopted to allow for certain Fortune 50 companies to pursue selling our products and services globally without restrictions and encumbrances with specific geographical regions.

### Our Products

With our exclusive licensing of Biowell's DNA technologies, we will be working to provide complete DNA anti-counterfeit and fraud prevention solutions. We will offer comprehensive and price-competitive products and solutions. The key characteristics of the DNA biotechnology are as follows:

UNIQUE AND IMPOSSIBLE TO REPLICATE DNA CODES -- specially processed DNA fragments, with unique characteristics and one-of-a-kind sequences, are used. The embedded DNA concentration is extremely small (3-5 micron) and cannot be analyzed unless proprietary biochemistry and reagents are used, along with our proprietary DNA reader systems.

EASY TO CUSTOMIZE -- We can tailor the DNA tagging to meet the customer's

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

product requirements. For example, the DNA codes can be generated based on one or more DNA sources and one or more anti-counterfeit technologies.

EASY AND QUICK TO USE -- With the DNA instant verification kit or scanner, instant verification can be obtained at the point-of-purchase. Hence, the authentication process can be performed quickly. Traditional anti-counterfeit technology analysis requires anywhere from 24 to 48 hours. Our technology will achieve an effective and timesaving deterrent against counterfeiters.

BROAD APPLICATIONS -- DNA anti-counterfeiting technology can be applied to almost any product on the market. The DNA ink is edible and can be used on tablets or capsules ensuring against counterfeiting pharmaceuticals.

### DNA MARKER

Our first anti-counterfeiting product is the DNA Marker, an agent that can be used to authenticate textile products. The DNA Marker can be applied at any point in the manufacturing process, from the freshly cut raw fibers through to the finished garment. As the DNA Marker can be applied to any fabric from cotton to wool, this will help textile vendors and governments determine the origin of thread, yarn and fabric through to the high-end garment manufacturers who suffer lost sales at the hands of counterfeiters. DNA Marker protection will also help preserve jobs at the legitimate textile and clothing manufacturers as well as ensuring that the proper taxes are collected on textiles and garments from authorities.

The DNA Marker will remain effective into the 22nd century and will be detectable throughout the different manufacturing stages without degrading. It can be detected in a variety of manners from inspection under infrared light to laboratory forensic analysis that authenticates it to a certainty of 99.9999 percent

23

Driven by market needs, this is the first of what is expected to be a number of products and services based upon the DNA marker technology. We will continuously assess the anti-counterfeit needs of markets, companies and governmental organizations and will develop proprietary technologies, solutions and products for these opportunities.

### INKS

DNA anti-counterfeit ink has been developed as two major applications. The first ink is Biowell's unique anti-counterfeit ink (covert ink), which can be authenticated at a forensic-science level of certainty, in a lab, with detailed DNA analysis. The second application is an enhanced version of the first, integrating into the original anti-counterfeit ink an additional instant detection function for on-site authentication (overt ink).

This instant verification process has been designed to allow sampling at any point in the product supply chain. By swabbing testing fluid containing a special activation buffer across the authentic DNA ink surface, a biochemical reaction occurs between the coating of the DNA molecules in the ink and the buffer fluid. This reaction manifests as a reversible color change, with the ink changing color from blue to pink, and back to blue within seconds. Testing can be repeated at various checkpoints throughout the product supply chain.

Proprietary production techniques are used to manufacture DNA with the unique property for integration with ink. The key to utilizing DNA for

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

anti-counterfeit purposes lies in the preservation of DNA. The system of production ensures that DNA can survive for over 100 years. In addition, special materials are used to shield purified DNA from environmental variation, which allows perpetual preservation of DNA and permanent proof of authenticity for genuine products.

DNA ink can be applied to:

- o GENERAL COMPANY USE: trade marks, patents, company logos, important documents
- o FINANCIAL INDUSTRY: currency, stocks, checks, bills, bonds, checks
- o RETAIL: event tickets, VIP tickets, clothing labels
- o MEDICINES: capsule and pill surface printing
- o INNER PACKAGE: foil blister packs
- o OUTER PACKAGE: boxes, bottles
- o ARTS: paintings, artifacts, collectibles and memorabilia
- o OTHERS: lottery tickets, stamps, custom seals, passports, visas, etc.

Virtually any item that can be duplicated now can be protected with any of these DNA ink applications. These applications are cost-effective and can be adapted to any company's current branding, product tracking, or other anti-counterfeiting program.

### DNA LABELS

DNA anti-counterfeit ink can be applied to garment labels. It can also be printed onto logos or on any other surface. Labels are printed with the proprietary ink containing the specific authentication DNA code for a manufacturer. The labels can then be easily tested for authenticity.

Knowledge that the labels are DNA-imprinted and can be quickly and easily verified serves as a deterrent to counterfeiters. We believe this in itself will create a demand for the proprietary DNA ink-impregnated label technology.

### DNA CHIP

Computer and electronic signals constitute most of the corporate security systems. These systems are of similar function and design, and are susceptible to duplication and counterfeit. The polymorphism of DNA is significantly more complex than electronic signals, and better suited for security systems.

24

The DNA chip card is intended for both authentication of the card and identification of the individual. For that purpose, a set of DNA chip cards are assigned with specific DNA (group ID), along with the individual's identification information and recorded in the chip's memory. A reader module is configured to recognize (and therefore verify) only the chip carrying the correct group ID. Any DNA chip card with different group ID, or indeed any other chip card, will be rejected.

The DNA chip uses artificially constructed DNA, with each user group having the same DNA code. Individuals are differentiated in the system by identification codes stored in the chip's memory. In addition, the DNA chip can be configured for the customer to have a particular person have their own DNA as the source DNA for that user group. The DNA chip generates unique signals and will not function properly once removed from the casing. The empty chip is not available anywhere else on the market, thus making it impossible to counterfeit. Once the imbedded DNA chip is sabotaged or removed the chip will cease functioning, thus preventing data on the chip from being duplicated.

The signal of a DNA chip is generated through an interaction between DNA

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

and a specially devised mechanism known as a DNA chip reader. A real DNA chip will generate an analogical signal and be received by the reader after the chip is stimulated. An LCD display screen provides immediate authentication by reading the unique DNA signals embedded in the chip.

The DNA chip function is versatile, which allows it to be integrated into the form of slot reader, slide through reader, or contact point reader for instant authentication. Biowell has also developed a portable, lightweight, hand-held scanner that can be used to authenticate the DNA chips. The cost of the DNA chip, card, and reader system is comparable to existing smart card systems. Above all, the reader can be linked externally with existing card readers to save replacement costs.

We believe that the DNA chip system is more secure than all other systems; since it cannot be copied or hacked, and works with specially configured readers.

The DNA biochip can be applied to many products. For example:

- o Security ID cards
- o Passports o Licenses
- o Credit and ATM cards o Debit cards
- o Consumer merchandise (CDs, VCDs, DVDs, notebook computers, PDAs, handbags, etc.)
- o Other applications where authentication is required (antiques, paintings, etc.,)

### DEMANDS FOR SECURITY AND POSITIVE IDENTIFICATION

As nations are threatened by terrorism and corporations try to prevent corporate fraud and espionage, the need for secure anti-counterfeiting and identification systems increases. Our technology can provide important and cost-effective support for local, state, and federal governments as well as corporations doing business with highly sensitive information. Our anti-counterfeiting technology can be used for the following types of identification and important government documents:

- o Passports
- o Green cards
- o Visas
- o Driver's licenses
- o Social Security cards
- o Student visas
- o Military ID's
- o Other important Identity cards and official documents

25

We will explore contracting with consultants in Washington D.C. that will assist with identifying and securing potential Government contracts that will utilize the DNA technology for identity and authentication. In 2004, we won the "Best of New technology" prize at the Security Industry Association conference in Washington D.C. in competition against some of the world's largest corporations. Shortly thereafter, we were inducted into the InteGuard Alliance, a consortium of 29 major companies providing security services and security technology to the US Government.

We intend to work in collaboration with Biowell and other security organizations in order to continue to research and develop new product lines derived from, but not limited to, DNA technology. Research and development of new product lines is an ongoing commitment of our and is currently underway in the Biowell labs.

## Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

### BUSINESS STRATEGY AND APPROACH

Our goal is to establish three integrated business operations addressing and servicing the needs of the marketplace for anti-counterfeit, fraud prevention, and homeland security solutions.

#### Intellectual Property Development, Product Operations & Partnerships

-----

We are a developer of security solutions that protects corporate and intellectual property from counterfeiting, fraud, piracy and product diversion using a proprietary line of DNA embedded biotechnology products accompanied by monitoring and enforcement support, we produce solutions customized to their customer's need. We intend to market and sell DNA anti-counterfeit and fraud prevention products and oversee laboratory facilities where consumer and corporate products can be tested for authenticity. We will oversee the development of new product lines that will address specific and individual customer needs. Additionally, this division will identify strategic licensees and partnerships in multiple sectors that will license and sell our products and biotechnologies. This will include sub-licensing the technology to key partners in each sector with an established base of customers. These new partners will be able to enhance their client services by adding our technology to the existing product line or current security methods to deter fraud and counterfeiting.

#### Consultant & Enforcement Operations

-----

As a service to our clients, we will consult with them on how to best protect their intellectual property and products. We will offer worldwide investigative and DNA analysis services for the enforcement and prosecution of counterfeiters and fraud itself and through our subcontractors or sub-licensees.

#### International Sub-License Operations

-----

This division will oversee the activities of all international sub-license alliances and partnerships. This division will also develop a corporate policy for all marketing and promotional activities.

We intend to seek alliances with existing anti-counterfeit networks in each market. We will train these networks to use our technology to detect and monitor counterfeit and fraud, and we will use our own anti-counterfeit and security experts to help detect counterfeiting attempts against corporations and government agencies.

By combining our three operations, we will provide multiple security solutions. Each division will produce separate revenue streams and integrated organizational structures that we believe will make us a leader in the field of anti-counterfeit and fraud prevention services.

We believe our management team and advisory board have a unique combination of skills for providing integrated DNA anti-counterfeit and fraud prevention systems for the protection and tracking of documents, products, and intellectual property:

- STRONG SECURITY KNOWLEDGE BASE --We believe that our team has the experience to analyze and provide solutions that address the security needs of companies in such diverse market segments as pharmaceuticals, designer clothing, luxury goods and cosmetics, aerospace, defense, diamonds, automotive, holography and chip

Edgar Filing: APPLIED DNA SCIENCES INC - Form SB-2/A

area of security and we believe they are recognized globally as experts in their fields.

- LEADING TECHNOLOGY -- We have exclusive rights to all patent pending, leading DNA anti-counterfeit, and fraud prevention technologies created by Biowell. We also have an agreement in place with HoloMex, Inc., a leading security hologram manufacturer, to create DNA-holograms, a new generation security product. We believe our management also has an in-depth understanding of microchip design and applications.
  
- STRATEGIC CORPORATE RELATIONSHIPS -- Our management has personal and corporate relationships with leaders in key industries such as: high-end fashion retail, computers, entertainment, automobiles, aerospace, defense and pharmaceuticals. We will utilize these existing relationships to introduce our anti-counterfeiting products and generate contracts, although no discussions have yet been held. Each industry has multiple facets for the anti-counterfeit DNA technology. For example, fashion retail can use our anti-counterfeit chip in its high-end fashion handbags, while a company producing fine wines can take advantage of our DNA-embedded label. Our proprietary technologies offer immediate and affordable detection and security for all of their trademarks and products.
  
- STRONG TECHNOLOGY ALLIANCES -- Our products can also work with and supplement products in key anti-fraud and security industries, such as:
  - o Electronics security
  - o Hologram manufacturing
  - o Radio Frequency Identification (RFID) systems
  - o Isotopic Markers
  - o Security papers and printing
  - o Other security-related products, systems, and services
  
- LAW ENFORCEMENT EXPERTISE -- Our management includes former federal law enforcement, security, and intelligence officers who we believe provide us with extensive hands-on experience in:
  - o Intellectual property investigation
  - o Counter-intelligence
  - o Personal security services
  - o Anti-counterfeit technologies
  - o Secure communications and data management
