UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-Q

(Mark One)

x Quarterly Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the quarterly period ended June 30, 2008

or

o Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the transition period from _____ to _____

Commission File Number: **001-09463**

RLI Corp.

(Exact name of registrant as specified in its charter)

ILLINOIS

(State or other jurisdiction of
incorporation or organization)

9025 North Lindbergh Drive, Peoria, IL
(Address of principal executive offices)

37-0889946

(I.R.S. Employer
Identification Number)

61615
(Zip Code)

(309) 692-1000

(Registrant's telephone number, including area code)

Edgar Filing: RLI CORP - Form 10-Q

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☒

Accelerated filer ☐

Non-accelerated filer ☐
(Do not check if a smaller
reporting company)

Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

APPLICABLE ONLY TO CORPORATE ISSUERS:

As of July 15, 2008 the number of shares outstanding of the registrant's Common Stock was 21,353,408.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

A. BASIS OF PRESENTATION

The unaudited condensed consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles (GAAP) for interim financial reporting and with the instructions to Form 10-Q and Regulation S-X. Accordingly, they do not include all of the disclosures required by GAAP for complete financial statements. As such, these unaudited condensed consolidated interim financial statements should be read in conjunction with our 2007 Annual Report on Form 10-K. Management believes that the disclosures are adequate to make the information presented not misleading, and all normal and recurring adjustments necessary to present fairly the financial position at June 30, 2008 and the results of operations of RLI Corp. and Subsidiaries for all periods presented have been made. The results of operations for any interim period are not necessarily indicative of the operating results for a full year.

The preparation of the unaudited condensed consolidated financial statements requires management to make estimates and assumptions relating to the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the unaudited condensed consolidated financial statements, and the reported amounts of revenue and expenses during the period. These estimates are inherently subject to change and actual results could differ from these estimates.

B. ADOPTED ACCOUNTING STANDARDS

SFAS No. 157, Fair Value Measurements (SFAS 157)

On January 1, 2008, we partially adopted Statement of Financial Accounting Standards (SFAS) No. 157, Fair Value Measurements. As allowed under Financial Accounting Standards Board (FASB) Staff Position (FSP) FAS 157-2 (see Pending Accounting Standards), we have elected not to fully adopt SFAS 157 at this time and are deferring adoption for certain nonfinancial assets and liabilities until January 1, 2009. SFAS 157 establishes a single authoritative definition of fair value, sets out a framework for measuring fair value, and provides a hierarchical disclosure framework for assets and liabilities measured at fair value. The pronouncement describes fair value as being based on a hypothetical transaction to sell an asset or transfer a liability at a specific measurement date (an exit price), as considered from the perspective of a market participant who holds the asset or owes the liability. In addition, fair value should be viewed as a market-based measurement, not an entity-specific measurement. Therefore, fair value should be determined based on the assumptions that market participants would use in pricing an asset or liability, including all risks associated with that asset or liability. SFAS 157 became effective for fiscal years beginning after November 15, 2007. The partial adoption of SFAS 157 had no impact on our financial position or results of operations.

SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities (SFAS 159)

On January 1, 2008, we adopted SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities. The Statement permits entities to choose to measure many financial instruments and certain other items at fair value. The objective is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. This Statement is expected to expand the use of fair value measurement, which is consistent with the Board's long-term measurement objectives for accounting for financial instruments. SFAS 159 became effective for fiscal years beginning after November 15, 2007. We have elected not to implement the fair value option with respect to any existing assets or liabilities; therefore, the adoption of SFAS 159 had no impact on our financial position or results of operations.

C. PENDING ACCOUNTING STANDARDS

FSP FAS 157-2, Effective Date of FASB Statement No. 157

FASB Staff Position (FSP) FAS 157-2 delays the effective date of FAS 157, Fair Value Measurements, to fiscal years beginning after November 15, 2008 for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis. The delay is intended to allow the Board and constituents additional time to consider the effect of various implementation issues that have arisen, or that may arise, from the application of FAS 157. Partial deferral of FAS 157 would apply to our goodwill.

D. INTANGIBLE ASSETS

In accordance with SFAS 142, Goodwill and Other Intangible Assets, the amortization of goodwill and indefinite-lived intangible assets is not permitted. Goodwill and indefinite-lived intangible assets remain on the balance sheet and are tested for impairment on an annual basis, or earlier if there is reason to suspect that their values may have been diminished or impaired. Goodwill, which relates to our surety segment, is listed separately on the balance sheet and totaled \$26.2 million at June 30, 2008 and December 31, 2007. Annual impairment testing was performed during the second quarter of 2008, pursuant to the requirements of SFAS 142. Based upon this review, this asset was not impaired.

Intangible assets with definite lives continue to be amortized over their estimated useful lives. Definite-lived intangible assets that were amortized under SFAS 142 during the periods presented relate to our purchase of customer-related and marketing-related intangibles. These intangibles had useful lives ranging from five to 10 years. Amortization of intangible assets was \$0.1 million for the first six months of 2007. There is no amortization expense in 2008 as these assets were fully amortized in 2007.

E. EARNINGS PER SHARE

Edgar Filing: RLI CORP - Form 10-Q

Basic earnings per share (EPS) excludes dilution and is computed by dividing income available to common shareholders by the weighted-average number of common shares outstanding for the period. Diluted EPS reflects the dilution

that could occur if securities or other contracts to issue common stock or common stock equivalents were exercised or converted into common stock. When inclusion of common stock equivalents increases the earnings per share or reduces the loss per share, the effect on earnings is anti-dilutive. Under these circumstances, the diluted net earnings or net loss per share is computed excluding the common stock equivalents.

Pursuant to disclosure requirements contained in SFAS 128, Earnings Per Share, the following represents a reconciliation of the numerator and denominator of the basic and diluted EPS computations contained in the condensed consolidated financial statements.

(in thousands, except per share data)	For the Three-Month Period Ended June 30, 2008			For the Three-Month Period Ended June 30, 2007		
	Income (Numerator)	Shares (Denominator)	Per Share Amount	Income (Numerator)	Shares (Denominator)	Per Share Amount

Income available to common shareholders	\$ 64,109	22,036	\$ 2.91	\$ 82,370	24,562	\$ 3.35

2. INVESTMENTS

The following tables are used as part of our impairment analysis and illustrate the total value of securities that were in an unrealized loss position as of June 30, 2008 and December 31, 2007. They segregate the securities based on type, noting the fair value, cost (or amortized cost), and unrealized loss on each category of investment as well as in total. The tables further classify the securities based on the length of time they have been in an unrealized loss position. As of June 30, 2008 and December 31, 2007,

unrealized losses, as shown in the following tables, were 2% and 1%, respectively, of total invested assets. Unrealized losses have increased in 2008, reflective of recent market volatility.

Edgar Filing: RLI CORP - Form 10-Q

The following table shows the composition of the fixed income securities in unrealized loss positions at June 30, 2008 by the National Association of Insurance Commissioners (NAIC) rating and the generally equivalent Standard & Poor's (S&P) and Moody's ratings. Not all of the securities are rated by S&P and/or Moody's.

NAIC Rating	Equivalent S&P Rating	Equivalent Moody's Rating	(dollars in thousands)			
			Book Value	Fair Value	Unrealized Loss	Percent to Total
1	AAA/AA/A	Aaa/Aa/A	\$ 599,389	\$ 585,687	\$ (13,702)	80.3%
2	BBB	Baa	57,078	53,725	(3,353)	19.7%
3	BB	Ba				
4	B	B				
5	CCC or lower	Caa or lower				
6						
		Total	\$ 656,467	\$ 639,412	\$ (17,055)	100.0%

The fixed income portfolio contained 381 unrealized loss positions as of June 30, 2008. The \$17.1 million in associated unrealized losses for these 381 securities is 1.2% of the fixed income portfolio's cost basis. Of these 381 securities, 61 have been in an unrealized loss position for more than 12 consecutive months and these collectively represent \$6.8 million in unrealized losses. All fixed income securities in the investment portfolio continue to pay the expected coupon payments under the contractual terms of the securities. The fixed income unrealized losses can primarily be attributed to an increase in medium and long-term interest rates since the purchase of many of these fixed income securities. We continually monitor the credit quality of our fixed income investments to gauge our ability to be repaid principal and interest. We consider price declines of securities in our other-than-temporary-impairment analysis where such price declines provide evidence of declining credit quality, and we distinguish between price changes caused by credit deterioration, as opposed to rising interest rates.

Factors that we consider in the evaluation of credit quality include:

1. Credit ratings from major rating agencies, including Moody's and S&P,
2. Business and operating performance trends,
3. Management quality/turnover,
4. Industry competitive analysis, and
5. Changes in business model/strategy.

As of June 30, 2008, we held 34 common stock positions that were in unrealized loss positions. Unrealized losses on these securities totaled \$16.7 million. Of the 34 common stock positions that were in an unrealized loss position, 2 have been in an unrealized loss position for more than 12 consecutive months and these collectively represent \$6.5 million in unrealized losses. We continue to believe the common stock positions in unrealized loss positions will appreciate to their cost basis within a reasonable period of time.

As of June 30, 2008, we held 34 preferred stock positions that were in unrealized loss positions. Unrealized losses on these securities totaled \$6.8 million. Of the 34 preferred stock positions that were in an unrealized loss position, 11 have been in an unrealized loss position for more than 12 consecutive months and these collectively represent \$4.3 million in unrealized losses. We continue to believe the preferred stock positions in unrealized

loss positions will appreciate to their cost basis within a reasonable period of time.

3. FAIR VALUE MEASUREMENTS

Assets and Liabilities Recorded at Fair Value on a Recurring Basis

Effective January 1, 2008, we determined the fair values of certain financial instruments based on the fair value hierarchy established in SFAS 157. SFAS 157 requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The standard describes three levels of inputs that may be used to measure fair value.

Level 1: quoted price (unadjusted) in active markets for identical assets

Level 2: inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the instrument

Level 3: inputs to the valuation methodology are unobservable for the asset or liability

SFAS 157 defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date.

To measure fair value, we obtain quoted market prices for our investment securities. If a quoted market price is not available, we use quoted market prices of similar securities.

Assets measured at fair value on a recurring basis are summarized below:

(\$ in 000s) Description	As of June 30, 2008, Fair Value Measurements Using			Total
	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
Trading securities	\$	\$ 15,309	\$	\$ 15,309
Available-for-sale securities	348,660	1,337,760		1,686,420
Total	\$ 348,660	\$ 1,353,069	\$	\$ 1,701,729

Edgar Filing: RLI CORP - Form 10-Q

As noted in the above table, we do not have any assets measured at fair value on a recurring basis using significant unobservable inputs (Level 3) during the period.

Assets and Liabilities Recorded at Fair Value on a Non-recurring Basis

As allowed under *FSP FAS 157-2, Effective Date of FASB Statement No. 157*, as of January 1, 2008, we have elected not to fully adopt SFAS 157 and are deferring adoption for certain nonfinancial assets and liabilities until January 1, 2009. On our balance sheet, this deferral would apply to goodwill.

In accordance with SFAS 142, goodwill relating to our surety segment is listed separately on the balance sheet and totaled \$26.2 million at June 30, 2008.

4. STOCK BASED COMPENSATION

During 2005, our shareholders approved the RLI Corp. Omnibus Stock Plan (omnibus plan). The purpose of the omnibus plan is to promote our interests and those of our shareholders by providing our key personnel an opportunity to acquire a proprietary interest in the company and reward them for achieving a high level of corporate performance and to encourage our continued success and growth. Awards under the omnibus plan may be in the form of restricted stock, stock options (both incentive and nonqualified), stock appreciation rights, performance units, as well as other stock based awards. Eligibility under the omnibus plan is limited to our employees or employees of any affiliate and to individuals or entities who are not employees but who provide services to us or an affiliate, including services provided in the capacity of consultant, advisor or director. The granting of awards under the plan is solely at the discretion of the Board of Directors, based on the recommendation of the Executive Resources Committee and the Nominating/Corporate Governance Committee of our Board of Directors. The total number of shares of common stock available for distribution under the omnibus plan may not exceed 1,500,000 shares (subject to adjustment for changes in our capitalization). Since 2005, we have granted 911,850 stock options under this plan, including 230,750 thus far in 2008.

Under the omnibus plan, we grant stock options for shares with an exercise price equal to the fair market value of the shares at the date of grant. Options generally vest and become exercisable ratably over a five-year period and have a ten-year life. The related compensation expense is recognized over the requisite service period. In most instances, the requisite service period and vesting period will be the same. For participants who are retirement eligible, defined by the plan as those individuals whose age and years of service equals 75, the requisite service period is deemed to be met and options are immediately expensed on the date of grant. For participants who will become retirement eligible during the vesting period, the requisite service period over which expense is recognized is the period between the grant date and the attainment of retirement eligibility. Shares issued upon option exercise are newly issued shares.

The following tables summarize option activity for the periods ended June 30, 2008 and 2007:

	Number of Options Outstanding	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life	Aggregate Intrinsic Value (in 000 s)
Outstanding options at January 1, 2008	1,605,252	\$ 36.34		
Options granted	230,750	\$ 50.26		
Options exercised	(90,158)	\$ 23.87		\$ 2,432
Options canceled/forfeited	(3,120)	\$ 51.42		
Outstanding options at June 30, 2008	1,742,724	\$ 38.80	6.13	\$ 18,588
Exercisable options at June 30, 2008	1,192,473	\$ 32.54	4.78	\$ 20,188

	Number of Options Outstanding	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life	Aggregate Intrinsic Value (in 000 s)
Outstanding options at January 1, 2007	1,632,019	\$ 31.29		
Options granted	216,300	\$ 56.10		
Options exercised	(68,191)	\$ 22.88		\$ 2,315
Options canceled/forfeited	(4,580)	\$ 50.30		
Outstanding options at June 30, 2007	1,775,548	\$ 34.59	5.83	\$ 37,931
Exercisable options at June 30, 2007	1,394,687	\$ 29.40	4.85	\$ 37,033

The majority of our options are granted annually at our regular board meeting in May. Thus far in 2008, 230,750 options were granted with an average exercise price of \$50.26 and an average fair value of \$12.51. We recognized \$0.7 million of expense in the second quarter of 2008, and \$1.2 million in the first six months of 2008, related to options vesting. Since options granted under our plan are non-qualified, we recorded a tax benefit of \$0.2 million in the second quarter of 2008, and \$0.4 million in the first six months of 2008, related to this compensation expense. Total unrecognized compensation expense relating to outstanding and unvested options was \$5.0 million, which will be recognized over the remainder of the vesting period.

The fair value of options was estimated using a Black-Scholes based option pricing model with the following weighted average grant-date assumptions and weighted average fair values as of June 30:

	2008	2007
Weighted-average fair value of grants	\$ 12.51	\$ 15.12
Risk-free interest rates	3.27%	4.60%
Dividend yield	1.53%	1.47%
Expected volatility	23.76%	21.72%
Expected option life	6.34 years	6.34 years

The risk-free rate is determined based on U.S. treasury yields that most closely approximate the option's expected life. The dividend yield is calculated based on the average annualized dividends paid during the most recent five-year period. The expected volatility is calculated by computing the weighted average of the most recent one-year volatility, the most recent volatility based on expected life and the median of the rolling volatilities based on the expected life of RLI stock. The expected option life is determined based on historical exercise behavior and the assumption that all outstanding options will be exercised at the midpoint of the current date and remaining contractual term, adjusted for the demographics of the current year's grant.

5. OPERATING SEGMENT INFORMATION - Selected information by operating segment is presented in the table below. Additionally, the table reconciles segment totals to total earnings and total revenues.

SEGMENT DATA (in thousands)

SEGMENT DATA (in thousands)	For the Three-Month Period Ended June 30, REVENUES		For the Six-Month Period Ended June 30, REVENUES	
	2008	2007	2008	2007

A detailed discussion of earnings and results by segment is contained in management's discussion and analysis of financial condition and results of operations.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

SAFE HARBOR STATEMENT UNDER THE PRIVATE SECURITIES LITIGATION REFORM ACT OF 1995: This discussion and analysis may contain forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934 that are not historical facts, and involve risks and uncertainties that could cause actual results to differ materially from those expected and projected. Various risk factors that could affect future results are listed in our filings with the Securities and Exchange Commission, including the Annual Report on Form 10-K for the year ended December 31, 2007.

OVERVIEW

We underwrite selected property and casualty insurance through major subsidiaries collectively known as RLI Insurance Group (the Group). We conduct operations principally through three insurance companies. RLI Insurance Company, our principal subsidiary, writes multiple lines insurance on an admitted basis in all 50 states, the District of Columbia and Puerto Rico. Mt. Hawley Insurance Company, a subsidiary of RLI Insurance Company, writes surplus lines insurance in all 50 states, the District of Columbia, Puerto Rico, the Virgin Islands and Guam. RLI Indemnity Company, a subsidiary of Mt. Hawley Insurance Company, has authority to write multiple lines of insurance

on an admitted basis in 49 states and the District of Columbia. We are an Illinois corporation that was organized in 1965. We have no material foreign operations.

As a niche company, we offer specialty insurance coverages designed to meet specific insurance needs of targeted insured groups and underwrite particular types of coverage for certain markets that are underserved by the insurance industry, such as our commercial earthquake coverage or oil and gas surety bonds. We also provide types of coverages not generally offered by other companies, such as our stand-alone personal umbrella policy. The excess and surplus market, which unlike the standard admitted market is less regulated and more flexible in terms of policy forms and premium rates, provides an alternative for customers with hard-to-place risks. When we underwrite within the surplus lines market, we are selective in the line of business and type of risks we choose to write. Using our nonadmitted status in this market allows us to tailor terms and conditions to manage these exposures more effectively than our admitted counterparts. Often the development of these specialty insurance coverages is generated through proposals brought to us by an agent or broker seeking coverage for a specific group of clients. Once a proposal is submitted, underwriters determine whether it would be a viable product in keeping with our business objectives.

We measure the results of our insurance operations by monitoring certain measures of growth and profitability across three distinct business segments: casualty, property, and surety. Growth is measured in terms of gross premiums written and profitability is analyzed through combined ratios, which are further subdivided into their respective loss and expense components. The combined ratios represent the income or loss generated from our underwriting segments.

The foundation of our overall business strategy is to underwrite for profit. This drives our ability to provide shareholder returns in three different ways: the underwriting profit itself, net investment income from our investment portfolio, and long-term appreciation in our equity portfolio. Our investment strategy is based on preservation of capital as the first priority, with a secondary focus on generating total return.

The property and casualty insurance business is cyclical and influenced by many factors, including price competition, economic conditions, natural or man-made disasters (for example, earthquakes, hurricanes, and terrorism), interest rates, state regulations, court decisions and changes in the law. One of the unique and challenging features of the property and casualty insurance business is that coverages must be priced before costs have fully developed, because premiums are charged before claims are incurred. This requires that liabilities be estimated and recorded in recognition of future loss and settlement obligations. Due to the inherent uncertainty in estimating these liabilities, there can be no assurance that actual liabilities will not be more or less than recorded amounts; if actual liabilities differ from recorded amounts, there will be an adverse or favorable effect on net earnings. In evaluating the objective performance measures previously mentioned, it is important to consider the following individual characteristics of each major insurance segment.

The casualty portion of our business consists largely of general liability, transportation, multi-peril program business, commercial umbrella, personal umbrella, executive products and other specialty coverages. In addition, we

provide employers' indemnity and in-home business owners coverage. The casualty business is subject to the risk of estimating losses and related loss reserves because the ultimate settlement of a casualty claim may take several years to fully develop. The casualty segment may also be affected by evolving legislation and court decisions that define the extent of coverage and the amount of compensation due for injuries or losses.

Our property segment primarily underwrites commercial fire, earthquake, difference in conditions, marine, facultative reinsurance, and in the state of Hawaii, select personal lines policies. Property insurance results are subject to the variability introduced by perils such as earthquakes, fires and hurricanes. Our major catastrophe exposure is to losses caused by earthquakes, primarily on the West Coast. Our second largest catastrophe exposure is to losses caused by hurricanes to commercial properties throughout the Gulf and East Coasts, as well as to homes we insure in Hawaii. We attempt to limit our net aggregate exposure to a catastrophic event by purchasing reinsurance and through extensive use of computer-assisted modeling techniques. These techniques provide estimates of the concentration of risks exposed to catastrophic events.

The surety segment specializes in writing small-to-large commercial and small contract surety coverages, as well as those for the energy (plugging and abandonment of oil wells), petrochemical, and refining industries. We offer miscellaneous and contract surety bonds, including fidelity and court sureties. Often, our surety coverages involve a statutory requirement for bonds. While these bonds have maintained a relatively low loss ratio, losses may fluctuate due to adverse economic conditions that may affect the financial viability of an insured. The contract surety marketplace guarantees the construction work of a commercial contractor for a specific project. Generally, losses occur due to adverse economic conditions, inclement weather conditions or the deterioration of a contractor's financial condition. As such, this line has historically produced marginally higher loss ratios than other surety lines.

The insurance marketplace softened over the last several years, meaning that the marketplace became more competitive and prices were falling even as coverage terms became less restrictive. Nevertheless, we believe that our business model is geared to create underwriting income by focusing on sound underwriting discipline. Our primary focus will continue to be on underwriting profitability as opposed to premium growth or market share measurements.

GAAP and non-GAAP Financial Performance Metrics

Throughout this quarterly report, we present our operations in the way we believe will be most meaningful, useful, and transparent to anyone using this financial information to evaluate our performance. In addition to the GAAP presentation of net earnings and certain statutory reporting information, we show certain non-GAAP financial measures that we believe are valuable in managing our business, evaluating our performance, and drawing comparisons to our peers. These measures include underwriting income, gross premiums written, net premiums written, combined ratios, and net unpaid loss and settlement expenses.

Following is a list of non-GAAP measures found throughout this report with their definitions, relationships to GAAP measures, and explanations of their importance to our operations.

Underwriting Income

Underwriting income or profit represents the pretax profitability of our insurance operations and is derived by subtracting losses and settlement expenses, policy acquisition costs, and insurance operating expenses from net premium earned. Each of these captions is presented in the statements of earnings but not subtotaled. However, this information is available in total and by segment in note 5 to the financial statements,

Operating Segment Information. The nearest comparable GAAP measure is earnings before income taxes which, in addition to underwriting income, includes net investment income, net realized gains/losses, general corporate expenses, debt costs, and unconsolidated investee earnings.

Gross premiums written

While net premiums earned is the related GAAP measure used in the statements of earnings, gross premiums written is the component of net premiums earned that measures insurance business produced before the impact of ceding reinsurance premiums, but without respect to when those premiums will be recognized as actual revenue. We use this measure as an overall gauge of gross business volume in our insurance underwriting operations with some indication of profit potential subject to the levels of our retentions, expenses and loss costs.

Net premiums written

While net premiums earned is the related GAAP measure used in the statements of earnings, net premiums written is the component of net premiums earned that measures gross premiums written less the cost of ceding reinsurance premiums, but without respect to when those premiums will be recognized as actual revenue. We use this measure as an indication of retained or net business volume in our insurance underwriting operations. It provides some indication of future earnings potential subject to our expenses and loss costs.

Combined ratios

This ratio is a common insurance industry measure of profitability for any underwriting operation, and is calculated in two components. First, the expense ratio reflects the sum of policy acquisition costs and insurance operating expenses, divided by net premiums earned. The second component, the loss ratio, is losses and settlement expenses divided by net premiums earned. The sum of the loss and expense ratios is the combined ratio. The difference between the combined ratio and 100 reflects the per-dollar rate of underwriting income or loss. For example, a combined ratio of 85 implies that for every \$100 of premium we earn, we record \$15 of underwriting income.

Net Unpaid Loss and Settlement Expenses

Unpaid losses and settlement expenses, as shown in the liabilities section of our balance sheets, represents the total obligations to claimants for both estimates of known claims and estimates for incurred but not reported (IBNR) claims. The related asset item, reinsurance balances recoverable on unpaid losses and settlement expense, is the estimate of known claims and estimates of IBNR that we expect to recover from reinsurers. The net of these two items is generally referred to as net unpaid loss and settlement expenses and is

commonly referred to in our disclosures regarding the process of establishing these various estimated amounts.

Critical Accounting Policies

In preparing the condensed consolidated financial statements, we are required to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosures of contingent assets and liabilities as of the date of the condensed consolidated financial statements and the reported amounts of revenues and expenses for the reporting period. Actual results could differ significantly from those estimates.

The most critical accounting policies involve significant estimates and include those used in determining the liability for unpaid losses and settlement expenses, investment valuation, recoverability of reinsurance balances and deferred policy acquisition costs.

Unpaid Losses and Settlement Expenses

Overview

Loss and loss adjustment expense (LAE) reserves represent our best estimate of ultimate amounts for losses and related settlement expenses from claims that have been reported but not paid, and those losses that have occurred but have not yet been reported to us. Loss reserves do not represent an exact calculation of liability, but instead represent our estimates, generally utilizing individual claim estimates and actuarial expertise and estimation techniques at a given accounting date. The loss reserve estimates are expectations of what ultimate settlement and administration of claims will cost upon final resolution. These estimates are based on facts and circumstances then known to us, review of historical settlement patterns, estimates of trends in claims frequency and severity, projections of loss costs, expected interpretations of legal theories of liability, and many other factors. In establishing reserves, we also take into account estimated recoveries, reinsurance, salvage, and subrogation. The reserves are reviewed regularly by a team of actuaries we employ.

The process of estimating loss reserves involves a high degree of judgment and is subject to a number of variables. These variables can be affected by both internal and external events, such as changes in claims handling procedures, claim personnel, economic inflation, legal trends, and legislative changes, among others. The impact of many of these items on ultimate costs for loss and LAE is difficult to estimate. Loss reserve estimations also differ significantly by coverage due to differences in claim complexity, the volume of claims, the policy limits written, the terms and conditions of the underlying policies, the potential severity of individual claims, the determination of occurrence date for a claim, and reporting lags (the time between the occurrence of the policyholder event and when it is actually reported to the insurer). Informed judgment is applied throughout the process. We continually refine our loss reserve estimates as historical loss experience develops and additional claims are reported and settled. We rigorously attempt to consider all significant facts and circumstances known at the time loss reserves are established.

Due to inherent uncertainty underlying loss reserve estimates, including but not limited to the future settlement environment, final resolution of the

estimated liability may be different from that anticipated at the reporting date. Therefore, actual paid losses in the future may yield a materially different amount than currently reserved favorable and unfavorable. The amount by which estimated losses differ from those originally reported for a period is known as development. Development is unfavorable when the losses ultimately settle for more than the levels at which they were reserved or subsequent estimates indicate a basis for reserve increases on unresolved claims. Development is favorable when losses ultimately settle for less than the amount reserved or subsequent estimates indicate a basis for reducing loss reserves on unresolved claims. We reflect favorable or unfavorable developments of loss reserves in the results of operations in the period the estimates are changed.

We record two categories of loss and LAE reserves case-specific reserves and IBNR reserves.

Within a reasonable period of time after a claim is reported, our claim department completes an initial investigation and establishes a case reserve. This case-specific reserve is an estimate of the ultimate amount we will have to pay for the claim, including related legal expenses and other costs associated with resolving and settling a particular claim. The estimate reflects all of the current information available regarding the claim, the informed judgment of our professional claim personnel, our reserving practices and experience, and the knowledge of such personnel regarding the nature and value of the specific type of claim. During the life cycle of a particular claim, more information may materialize that causes us to revise the estimate of the ultimate value of the claim either upward or downward. We may determine that it is appropriate to pay portions of the reserve to the claimant or related settlement expenses before final resolution of the claim. The amount of the individual claim reserve will be adjusted accordingly and is based on the most recent information available.

We establish IBNR reserves to estimate the amount we will have to pay for claims that have occurred, but have not yet been reported to us; claims that have been reported to us that may ultimately be paid out differently than expected by our case-specific reserves; and claims that have been paid and closed, but may reopen and require future payment.

Our IBNR reserving process involves three steps including an initial IBNR generation process that is prospective in nature; a loss and LAE reserve estimation process that occurs retrospectively; and a subsequent discussion and reconciliation between our prospective and retrospective IBNR estimates which includes changes in our provisions for IBNR where deemed appropriate. These three processes are discussed in more detail in the following sections.

LAE represents the cost involved in adjusting and administering losses from policies we issued. The LAE reserves are frequently separated into two components: allocated and unallocated. Allocated loss adjustment expense (ALAE) reserves represent an estimate of claims settlement expenses that can be identified with a specific claim or case. Examples of ALAE would be the hiring of an outside adjuster to investigate a claim or an outside attorney to defend our insured. The claims professional typically estimates this cost separately from the loss component in the case reserve. Unallocated loss adjustment expense (ULAE) reserves represent an estimate of claims settlement expenses that cannot be identified with a specific claim. An example of ULAE

would be the cost of an internal claims examiner to manage or investigate a reported claim.

All decisions regarding our best estimate of ultimate loss and LAE reserves are made by our Loss Reserve Committee (LRC). The LRC is made up of various members of the management team including the chief executive officer, chief operating officer, chief financial officer, chief actuary, general counsel and other selected executives. We do not use discounting (recognition of the time value of money) in reporting our estimated reserves for losses and settlement expenses. Based on current assumptions used in calculating reserves, we believe that our overall reserve levels at June 30, 2008, make a reasonable provision to meet our future obligations.

Initial IBNR Generation Process

Initial carried IBNR reserves are determined through a reserve generation process. The intent of this process is to establish an initial total reserve that will provide a reasonable provision for the ultimate value of all unpaid loss and ALAE liabilities. For most casualty and surety products, this process involves the use of an initial loss and ALAE ratio that is applied to the earned premium for a given period. The result is our best initial estimate of the expected amount of ultimate loss and ALAE for the period by product. Paid and case reserves are subtracted from this initial estimate of ultimate loss and ALAE to determine a carried IBNR reserve.

For most property products, we use an alternative method of determining an appropriate provision for initial IBNR. Since this segment is characterized by a shorter period of time between claim occurrence and claim settlement, the IBNR reserve is determined by an initial loss percentage applied to the rolling 12 month's premium earned. No deductions for paid or case reserves are made. This alternative method of determining initial IBNR reacts more quickly to the actual loss emergence and is more appropriate for our property products where final claim resolution occurs quickly.

The initial loss and ALAE ratios that are applied to earned premium are reviewed at least semiannually. Prospective estimates are made based on historical loss experience adjusted for price change and loss cost inflation. The initial loss and ALAE ratios also reflect some provision for estimation risk. We consider estimation risk by segment and product line. A segment with greater overall volatility and uncertainty has greater estimation risk. Characteristics of segments and products with higher estimation risk, include those exhibiting, but not limited to, the following characteristics:

- significant changes in underlying policy terms and conditions,
- a new business,
- significant exposure growth or turnover,
- small volume or lacking internal data requiring significant reliance on external data,
- longer emergence patterns with exposures to latent unforeseen mass tort,
- high severity and/or low frequency,
- operational processes undergoing significant change, and/or

- high sensitivity to significant swings in loss trends or economic change.

The historical and prospective loss and ALAE estimates along with the applicable risk factors identified above are the bases for determining our initial and subsequent carried reserves. Adjustments in the initial loss ratio by product and segment are made where necessary and reflect updated assumptions regarding loss experience, loss trends, price changes, and prevailing risk factors. The LRC makes all final decisions regarding changes in the initial loss and ALAE ratios.

Loss and LAE Reserve Estimating Process

A full analysis of our loss reserves takes place at least semi-annually. The purpose of these analyses is to provide validation of our carried loss reserves. Estimates of the expected value of the unpaid loss and LAE are derived using actuarial methodologies. These estimates are then compared to the carried loss reserves to determine the appropriateness of the current reserve balance.

The process of estimating ultimate payment for claims and claims expenses begins with the collection and analysis of current and historical claim data. Data on individual reported claims including paid amounts and individual claim adjuster estimates are grouped by common characteristics. There is judgment involved in this grouping. Considerations when grouping data include the volume of the data available, the credibility of the data available, the homogeneity of the risks in each cohort, and both settlement and payment pattern consistency. We use this data to determine historical claim reporting and payment patterns which are used in the analysis of ultimate claim liabilities. For portions of the business without sufficiently large numbers of policies or that have not accumulated sufficient historical statistics, our own data is supplemented with external or industry average data as available and when appropriate. For our executive products and marine business, we utilize external data extensively.

In addition to the review of historical claim reporting and payment patterns, we also incorporate an estimate of expected losses relative to premium by year into the analysis. The expected losses are based on a review of historical loss performance, trends in frequency and severity, and price level changes. The estimation of expected losses is subject to judgment including consideration given to internal and industry data available, growth and policy turnover, changes in policy limits, changes in underlying policy provisions, changes in legal and regulatory interpretations of policy provisions, and changes in reinsurance structure.

We use historical development patterns, estimations of the expected loss ratios, and standard actuarial methods to derive an estimate of the ultimate level of loss and LAE payments necessary to settle all the claims occurring as of the end of the evaluation period. Once an estimate of the ultimate level of claim payments has been derived, the amount of paid loss and LAE and case reserve through the evaluation date is subtracted to reveal the resulting level of IBNR.

Our reserve processes include multiple standard actuarial methods for determining estimates of IBNR reserves. Other supplementary methodologies are incorporated as deemed necessary. Mass tort and latent liabilities are examples of exposures where supplementary methodologies are used. Each method produces an estimate of ultimate loss by accident year. We review all of these

various estimates and the actuaries assign weight to each based on the characteristics of the product being reviewed. The result is a single actuarial point estimate by product by accident year.

Our estimates of ultimate loss and LAE reserves are subject to change as additional data emerges. This could occur as a result of change in loss development patterns, a revision in expected loss ratios, the emergence of exceptional loss activity, a change in weightings between actuarial methods, the addition of new actuarial methodologies or new information that merits inclusion, or the emergence of internal variables or external factors that would alter our view.

There is uncertainty in the estimates of ultimate losses. Significant risk factors to the reserve estimate include, but are not limited to, unforeseen or unquantifiable changes in:

- loss payment patterns,
- loss reporting patterns,
- frequency and severity trends,
- underlying policy terms and conditions,
- business or exposure mix,
- operational or internal process changes affecting timing of recording transactions,
- regulatory and legal environment, and/or
- economic environment.

Our actuaries engage in discussions with senior management, underwriting, and the claims department on a regular basis to attempt to ascertain any substantial changes in operations or other assumptions that are necessary to consider in the reserving analysis.

A considerable degree of judgment in the evaluation of all these factors is involved in the analysis of reserves. The human element in the application of judgment is unavoidable when faced with material uncertainty. Different experts will choose different assumptions when faced with such uncertainty, based on their individual backgrounds, professional experiences, and areas of focus. Hence, the estimate selected by various qualified experts may differ materially from each other. We consider this uncertainty by examining our historic reserve accuracy.

Given the significant impact of the reserve estimates on our financial statements, we subject the reserving process to significant diagnostic testing. We have incorporated data validity checks and balances into our front-end processes. Leading indicators such as actual versus expected emergence and other diagnostics are also incorporated into the reserving processes.

Determination of Our Best Estimate

Upon completion of our full loss and LAE estimation analysis, the results are discussed with the LRC. As part of this discussion, the analysis supporting an indicated point estimate of the IBNR loss reserve by product is reviewed. The actuaries also present explanations supporting any changes to the underlying assumptions used to calculate the indicated point estimate. Quarterly, we also consider the actual loss emergence as compared to the expected loss emergence derived from the last full loss and LAE analyses. A review of the resulting

variance between the indicated reserves and the carried reserves determined from the initial IBNR generation process takes place. After discussion of these analyses and all relevant risk factors, the LRC determines whether the reserve balances require adjustment.

As a predominantly excess and surplus lines and specialty insurer servicing niche markets, we believe there are several reasons to carry on an overall basis reserves above the actuarial point estimate. We believe we are subject to above-average variation in estimates and that this variation is not symmetrical around the actuarial point estimate.

One reason for the variation is the above-average policyholder turnover and changes in the underlying mix of exposures typical of an excess and surplus lines business. This constant change can cause estimates based on prior experience to be less reliable than estimates for more stable, admitted books of business. Also, as a niche market writer, there is little industry level information for direct comparisons of current and prior experience and other reserving parameters. These unknowns create greater-than-average variation in the actuarial point estimates.

Actuarial methods attempt to quantify future events. Insurance companies are subject to unique exposures that are difficult to foresee at the point coverage is initiated and, often, many years subsequent. Judicial and regulatory bodies involved in interpretation of insurance contracts have increasingly found opportunities to expand coverage beyond that which was intended or contemplated at the time the policy was issued. Many of these policies are issued on an all risk and occurrence basis. Aggressive plaintiff attorneys have often sought coverage beyond the insurer's original intent. Some examples would be the industry's ongoing asbestos and environmental litigation, court interpretations of exclusionary language on mold and construction defect, and debates over wind versus flood as the cause of loss from major hurricane events.

We believe that because of the inherent variation and the likelihood that there are unforeseen and under-quantified liabilities absent from the actuarial estimate, it is prudent to carry loss reserves above the actuarial point estimate. Most of our variance between the carried reserve and the actuarial point estimate is in the most recent accident years for our casualty segment where the most significant estimation risks reside. These estimation risks are considered when setting the initial loss ratio for the product and segment. In the cases where these risks fail to materialize, favorable loss development will likely occur over subsequent accounting periods. It is also possible that the risks materialize in an amount above that we considered when booking our initial loss reserves. In this case, unfavorable loss development is likely to occur over subsequent accounting periods.

Our best estimate of our loss and LAE reserves may change depending on a revision in the actuarial point estimate, the actuary's certainty in the estimates and processes, and our overall view of the underlying risks. From time to time, we benchmark our reserving policies and procedures and update them by adopting industry best practices where appropriate.

Loss reserve estimates are subject to a high degree of variability due to the inherent uncertainty of ultimate settlement values. Periodic adjustments to these estimates will likely occur as the actual loss emergence reveals itself over time.

Investment Valuation

Throughout each year, we and our investment managers buy and sell securities to maximize overall investment returns in accordance with investment policies established and monitored by our board of directors and executive officers.

We classify our investments in debt and equity securities with readily determinable fair values into one of three categories. Held-to-maturity securities are carried at amortized cost. Available-for-sale securities are carried at fair value with unrealized gains/losses recorded as a component of comprehensive earnings and shareholders' equity, net of deferred income taxes. Trading securities are carried at fair value with unrealized gains/losses included in earnings.

We regularly evaluate our fixed income and equity securities to determine impairment losses for other-than-temporary declines in the fair value of the investments. Criteria considered during this process include, but are not limited to: the current fair value as compared to the cost (amortized, in certain cases) of the security, degree and duration of the security's fair value being below cost, credit quality, current economic conditions, the anticipated speed of cost recovery, and our decisions to hold or divest a security. We consider price declines of securities in our other-than-temporary impairment analysis where such price declines provide evidence of declining credit quality, and we distinguish between price changes caused by credit deterioration, as opposed to rising interest rates.

Factors that we consider in the evaluation of credit quality include:

- credit ratings from major rating agencies, including Moody's and S&P,
- business and operating performance trends,
- management quality/turnover,
- industry competitive analysis, and
- changes in business model/strategy.

Part of our evaluation of whether particular securities are other-than-temporarily impaired involves assessing whether we have both the intent and ability to continue to hold securities in an unrealized loss position until cost recovery. Significant changes in these factors could result in a charge to net earnings for impairment losses. Impairment losses result in a reduction of the underlying investment's cost basis.

Recoverability of Reinsurance Balances

Ceded unearned premiums and reinsurance balances recoverable on paid and unpaid losses and settlement expenses are reported separately as assets, rather than being netted with the related liabilities, since reinsurance does not relieve us of our liability to policyholders. Such balances

Edgar Filing: RLI CORP - Form 10-Q

are subject to the credit risk associated with the individual reinsurer. Additionally, the same uncertainties associated with estimating unpaid losses and settlement expenses impact the estimates for the ceded portion of such liabilities. We continually monitor the financial condition of our reinsurers. Our policy is to periodically charge to earnings an estimate of unrecoverable amounts from reinsurers. Further discussion of the security of our recoverable reinsurance balances can be found in note 5 to the financial statements included in our 2007 Annual Report on Form 10-K.

Deferred Policy Acquisition Costs

We defer commissions, premium taxes, and certain other costs that vary with and are primarily related to the acquisition of insurance contracts. Acquisition-related costs may be deemed ineligible for deferral when they are based on contingent or performance criteria beyond the basic acquisition of the insurance contract. All eligible costs are capitalized and charged to expense in proportion to premium revenue recognized. The method followed in computing deferred policy acquisition costs limits the amount of such deferred costs to their estimated realizable value. This would also give effect to the premiums to be earned and anticipated losses and settlement expenses, as well as certain other costs expected to be incurred as the premiums are earned. Judgments as to the ultimate recoverability of such deferred costs are highly dependent upon estimated future loss costs associated with the premiums written. This deferral methodology applies to both gross and ceded premiums and acquisition costs.

SIX MONTHS ENDED JUNE 30, 2008, COMPARED TO SIX MONTHS ENDED JUNE 30, 2007

Consolidated revenues, as displayed in the table that follows, totaled \$318.9 million for the first six months of 2008 compared to \$333.1 million for the same period in 2007.

Consolidated revenues (in thousands)	For the Six-Month Period Ended June 30,	
	2008	2007
Net premiums earned	\$ 268,260	\$ 275,465
Net investment income	38,863	38,067
Net realized investment gains	11,816	19,592
Total consolidated revenue	\$ 318,939	\$ 333,124

Consolidated revenue for the first six months of 2008 decreased \$14.2 million, or 4%, from the same period in 2007. Net premiums earned for the Group decreased 3% from 2007 levels, as casualty writings continue to decline due to overall rate softening. Net investment income improved 2% to \$38.9 million despite a decline in available investment yields.

Net after-tax earnings for the first six months of 2008 totaled \$64.1 million, \$2.91 per diluted share, compared to \$82.4 million, \$3.35 per diluted share, for the same period in 2007. In 2008, favorable development on prior years' loss reserves resulted in additional pretax earnings of \$18.5 million. Partially offsetting this favorable development in 2008 was \$2.2 million in property losses on Midwest floods. In 2007, favorable development on prior years' loss and hurricane reserves resulted in additional pretax earnings of \$36.4 million. Bonus and profit sharing-related expenses related to these specific items totaled \$1.1 million in 2008 and \$3.6 million in 2007. These performance-related expenses affected policy acquisition, insurance operating and general corporate expenses. Bonuses earned by executives, managers and associates are predominately influenced by corporate performance (operating earnings and return on capital).

During the first six months of 2008, equity in earnings of unconsolidated investee totaled \$6.2 million from Maui Jim, Inc. The first six months of 2007 reflected \$5.7 million in income. Investments in marketing and expansion

initiatives made by our investee during 2007 have resulted in increased sales and revenue during 2008.

Results for the first six months of 2008 included pretax realized gains of \$11.8 million, compared to pretax gains of \$19.6 million, for the same period last year. Realized gains are taxed at the statutory rate of 35%.

Comprehensive earnings, which include net earnings plus other comprehensive earnings (primarily the change in unrealized gains/losses net of tax), totaled \$19.9 million, \$0.91 per diluted share, for the first six months of 2008, compared to comprehensive earnings of \$68.0 million, \$2.77 per diluted share, for the same period in 2007. Unrealized losses, net of tax, for the first six months of 2008 were \$44.2 million, compared to \$14.4 million for the same period in 2007. With all of the uncertainty in the economy and financial markets, the equity markets struggled in the first six months of 2008. Through June 30, 2008, the equity portfolio returned -8.9% resulting in unrealized losses. Despite the decline during the first six months of the year, as of June 30, 2008, \$85.6 million in unrealized gains remained in the equity portfolio.

RLI INSURANCE GROUP

As reflected in the table below, gross premiums written for the Group declined to \$346.0 million for the first six months of 2008 from \$383.4 million for the same period of 2007, primarily attributable to a decrease in casualty and property writings. Underwriting income for the Group declined \$20.9 million to \$43.8 million for the first six months of 2008. Underwriting income for 2008 included \$18.5 million in favorable development on prior accident years' loss reserves, compared to \$36.4 million in 2007. The GAAP combined ratio totaled 83.6 in 2008, compared to 76.5 in 2007. The increase in combined ratio was primarily attributable to an increase in the Group's loss ratio. The Group's loss ratio increased to 46.2 for 2008, compared to 41.6 for 2007. The loss ratio in 2007 included a greater amount of favorable development on prior accident years' loss reserves, as discussed above.

	For the Six-Month Period Ended June 30,	
	2008	2007
Gross premiums written (in thousands)		
Casualty	\$ 208,290	\$ 238,607
Property	99,773	108,408
Surety	37,982	36,392
Total	\$ 346,045	\$ 383,407
Underwriting income(loss) (in thousands)		
Casualty	\$ 14,909	\$ 43,885
Property	21,909	12,740
Surety	6,985	8,073
Total	\$ 43,803	\$ 64,698
Combined ratio		
Casualty	90.8	75.0
Property	70.6	81.5
Surety	78.9	73.6
Total	83.6	76.5

Casualty

Gross premiums written for the casualty segment totaled \$208.3 million for the first six months of 2008, a decrease of \$30.3 million, or 13%, from the same period last year. This segment continues to feel the pressure of significant rate reductions. General liability, our largest growth contributor over the past several years, posted gross premiums written of \$76.4 million, a decrease of \$20.4 million, or 21%, from the same period last year. While rates have continued to deteriorate, this coverage has sustained profitable results. Transportation gross premiums written totaled \$26.9 million for 2008, a decrease of \$2.6 million, or 9%, from the first six months of 2007, due to continuing price and volume declines. Commercial umbrella reported gross premiums written of \$19.5 million in the first six months of 2008, a decline of \$3.6 million, or 15%, from the same period last year. On a positive note, gross premiums written for specialty program business advanced 8% to \$18.2 million and personal umbrella rose 3% to \$30.5 million from the same period in 2007. Despite the overall rate softening, we believe we will continue to find profitable opportunities. As the casualty market continues to soften, we will remain focused on growing areas that provide the best return, while maintaining strict adherence to underwriting discipline.

In total, the casualty segment posted underwriting income of \$14.9 million, compared to \$43.9 million for the same period last year. Both periods included favorable development on prior years' loss reserves. Results for 2008 include favorable loss development on prior accident years, primarily 2002 through 2006. Products affected were general liability, commercial and personal umbrella and executive products. Due to this positive emergence, during the first six months of 2008, we released reserves. These reserve releases improved the segment's underwriting results by \$15.2 million. From a comparative standpoint, results for 2007 included \$33.3 million of favorable loss experience on prior accident years (1998 through 2005), primarily for general liability, umbrella, transportation, executive products, and employer's indemnity, and on hurricanes (2005). Overall, the combined ratio for the casualty segment was 90.8 for 2008 compared to 75.0 in 2007. The

segment's loss ratio was 59.9 in 2008 compared to 45.2 in 2007, primarily driven by increased expected loss ratios for the 2008 accident year and a greater amount of favorable development that impacted the 2007 results. As described in our 2007 Annual Report on Form 10-K, we reflect historical loss experience, historical and projected price changes, and historical and projected loss cost inflation in our expected loss ratio projections. In 2008, we anticipated continued rate declines and moderate loss cost inflation, which resulted in increased actuarial loss projections for the 2008 accident year. The expense ratio for the casualty segment was 30.9 for the first six months of 2008 compared to 29.8 for the same period of 2007.

Property

Gross premiums written for the Group's property segment totaled \$99.8 million for the first six months of 2008, a decrease of \$8.6 million, or approximately 8%, from the same period last year. Our domestic fire book posted gross premiums written of \$37.8 million, a decrease of \$7.3 million, or 16%, from the same period last year. Our difference-in-conditions (DIC) coverage declined \$10.3 million, or 30%, to \$24.8 million for the first six months of 2008. Increased competition for non-catastrophe exposed accounts, combined with the softening of rates for earthquake and coastal wind-exposed risks, continue to impact the overall property market. Offsetting this decline, our marine division reported \$29.0 million in written premium during the first six months of 2008, an increase of \$8.5 million, or 41%, from the same period last year.

Net premiums earned for the segment increased \$5.4 million, or 8%, from the same period last year while net premiums written were flat, at \$71.7 million. The current increase in net premiums earned is reflective of the increase in net premiums written experienced in the first quarter of 2008. The segment has benefitted from decreased catastrophe costs resulting in a reduction in ceded catastrophe premium of \$4.9 million during the first six months of 2008. Further, the segment reduced the amount of facultative reinsurance purchased resulting in reduced ceded written premium of \$3.9 million and reduced ceded earned premium of \$5.0 million during the first six months of 2008. In addition, the marine division, our largest growth contributor, represents a larger percentage of the segment premium and has increased its retention rate in 2008. Therefore, the division retains an increased portion of the premium, along with a heightened level of risk. Net premiums written for that division increased \$8.8 million, or 51%, while net premiums earned increased \$8.9 million, or 66%, in the first six months of 2008 as a result of the growth in production and reduced reinsurance costs.

Underwriting income for the segment was \$21.9 million for the first six months of 2008, compared to \$12.7 million for the same period in 2007. Results for 2008 include favorable loss development on prior accident years, primarily 2005 through 2006, for marine and construction. Due to this positive emergence, during the first six months of 2008, we released reserves. These reserve releases improved the segment's underwriting results by \$2.1 million. This favorable development was offset by \$2.2 million in property losses on Midwest floods. From a comparative standpoint, results for 2007 included \$1.6 million of favorable loss experience on prior accident years (prior to 1999), on assumed property business and hurricanes (2005). However, increased frequency and severity of habitational fire losses negatively impacted results for 2007. Revised underwriting guidelines for habitational risks have negatively impacted written premium but are contributing to more stable and profitable underwriting results in 2008.

Segment results for 2008 translate into a combined ratio of 70.6, compared to 81.5 for the same period last year. The segment's loss ratio improved to 31.4 from 46.2 in 2007, due to the aforementioned reduction in loss activity from habitational risks.

From an expense standpoint, the segment's expense ratio for the first six months increased to 39.2 from 35.3 in 2007 due to increased commissions and the investment in additional underwriters. In addition, marine, our primary growth product in the segment, carries higher policy acquisition costs than other products within the segment.

Surety

The surety segment posted gross premiums written of \$38.0 million for the first six months of 2008, an increase of \$1.6 million, or 4%, from the same period last year. Premium growth was experienced across miscellaneous, commercial and contract lines. The segment posted underwriting income of \$7.0 million, compared to \$8.1 million for the same period last year. Results for 2008 include favorable loss development on prior accident years, primarily 2002, which led to reserve releases during the first six months of 2008. These reserve releases improved the segment's underwriting results by \$1.1 million. Results for 2007 included \$1.6 million of favorable loss development on a prior accident year (2005).

The combined ratio for the surety segment totaled 78.9 in 2008, versus 73.6 for the same period in 2007. The segment's loss ratio was 13.6 for 2008, compared to 10.5 for 2007, as both periods were favorably impacted by the aforementioned reserve releases. In 2008, loss ratios on the current accident year are up slightly, reflective of our expectation of moderate loss cost inflation. The expense ratio increased slightly to 65.3 compared to 63.1 for the same period last year as acquisition costs rose with the addition of underwriters and expansion efforts over the past year.

We are in litigation concerning certain commercial surety bond claims arising out of a specific bond program (the Commercial Money Center or CMC litigation), said litigation previously disclosed in various SEC filings, including Item 3- Legal Proceedings of our 2007 Annual Report on Form 10-K. On March 13, 2008, we reached a settlement with Bank of Waukegan, one of the investor banks party to the legal proceedings. The settlement ends our litigation with Bank of Waukegan but does not resolve our pending litigation with Atlantic Coast Federal Bank. The settlement with Bank of Waukegan relates to surety bonds representing approximately 11.75% of the amount to which the investor banks had claimed entitlement. The settlement did not have a material adverse impact on our financial statements taken as a whole. While it is impossible to ascertain the ultimate outcome of the litigation between us and Atlantic Coast Federal Bank (the remaining investor bank) at this time, we continue to believe we have meritorious defenses with respect to Atlantic Coast Federal Bank's claims and we will continue to vigorously assert those defenses in the pending litigation. We believe we are adequately reserved for the ultimate outcome of the remaining litigation and that the resolution will not have a material adverse impact on our financial statements taken as a whole. However, litigation is subject to inherent uncertainties, and if there were an outcome unfavorable to us, there exists the possibility of a material adverse impact on our financial condition, results of operations or cash flows in the period in which the outcome occurs.

INVESTMENT INCOME AND REALIZED CAPITAL GAINS

During the first six months of 2008, net investment income increased by 2.1% over that reported for the same period in 2007. This improvement was primarily due to increased yield on the taxable investment portfolio. On an after-tax basis, investment income increased by 2.6%. The average annual yields on our investments for the first six months of 2008 and 2007 were as follows:

	2008	2007
<u>Pretax Yield</u>		
Taxable	5.46%	5.37%
Tax-Exempt	3.98%	4.02%
<u>After-tax yield</u>		
Taxable	3.55%	3.49%
Tax-Exempt	3.77%	3.81%

The fixed-income portfolio increased by \$34.8 million during the first six months of 2008. This portfolio had a tax-adjusted total return on a mark-to-market basis of 1.4%. Our equity portfolio decreased by \$45.0 million during the first six months of 2008, to \$348.7 million. The equity portfolio had a total return of -8.9% during the first six months of 2008.

We realized a total of \$11.8 million in net capital gains in the first six months of 2008, compared to net capital gains of \$19.6 million in the first six months of 2007. Investment gains in 2008 relate primarily to the sale of certain equity securities. We sold these securities as we believe the proceeds could be invested in other opportunities that provide greater return potential going forward.

We regularly evaluate the quality of our investment portfolio. When we believe that a specific security has suffered an other-than-temporary decline in value, the investment's value is adjusted by reclassifying the decline from unrealized to realized losses. This has no impact on shareholders' equity. During the first three months of 2008, we recognized an other-than-temporary impairment loss of \$0.5 million. This other-than-temporary impairment charge relates to two floating rate preferred stock securities. While we did not recognize any other-than-temporary impairment losses in the second quarter, continued market volatility could lead to impairment in subsequent quarters.

In 2007, there were no losses associated with the other-than-temporary impairment of securities.

The following table is used as part of our impairment analysis and illustrates certain industry-level measurements relative to our equity and preferred stock portfolio as of June 30, 2008, including fair value, cost basis, and unrealized gains and losses.

Edgar Filing: RLI CORP - Form 10-Q

	Cost Basis	Fair Value	6/30/2008 Unrealized		Net	Unrealized Gain/Loss % (1)
			Gains	Losses		
			(dollars in thousands)			
Consumer Discretionary	\$ 18,246	\$ 17,643	\$ 1,451	\$ (2,054)	\$ (603)	-3.3%
Consumer Staples	12,291	29,012	16,721		16,721	136.0%
Energy	9,013	33,153	24,140		24,140	267.8%
Financials	27,683	31,723	6,497	(2,457)	4,040	14.6%
Healthcare	12,162	21,869	11,938	(2,231)	9,707	79.8%
Industrials	12,731	26,330	13,952	(353)	13,599	106.8%
Materials	7,542	7,294	308	(556)	(248)	-3.3%
Information Technology	13,005	20,757	7,812	(60)	7,752	59.6%
Telecommunications	4,408	9,997	5,589		5,589	126.8%
Utilities	42,153	62,396	20,598	(355)	20,243	48.0%
Preferred Stocks	48,257	41,555	54	(6,756)	(6,702)	-13.9%
Mutual Fund / ETF	55,531	46,931		(8,600)	(8,600)	-15.5%
	\$ 263,022	\$ 348,660	\$ 109,060	\$ (23,422)	\$ 85,638	32.6%

(1) Calculated as the percentage of net unrealized gain (loss) to cost basis.

We maintain an allocation to municipal fixed income securities. As of June 30, 2008, we had \$519.0 million in municipal securities. Of our consolidated municipal fixed income portfolio, approximately 70% of these bonds are insured by what we consider traditional monoline insurers through wrap insurance. Many of the traditional monoline municipal bond insurers have been under pressure in recent months. In many instances, rating agencies have downgraded these municipal bond insurers. Despite these downgrades, the credit quality on our municipal bond portfolio remains outstanding. As of June 30, 2008, approximately 41% of our municipal bond portfolio maintains an AAA rating, and 53% of our municipal bond portfolio maintains an AA rating. It is important to note that historical default studies indicate that the default rate for municipal bonds is less than similarly rated corporate bonds. We believe that our municipal fixed income portfolio has a very high credit rating and that insurance is not necessary to own these securities. Most importantly, the underlying credit strength of the municipalities that issued the securities has not changed.

A timely topic in today's environment is subprime mortgage exposure. We define subprime mortgages as loans which include one or more of the following: a weak credit score (FICO score of less than 640), high debt-to-income ratio, high loan-to-value ratio, or undocumented income. We have reviewed our subprime investment exposure and believe our risk is minimal. Our exposure to subprime is through direct investments in subprime backed mortgage products and is approximately \$3 million. To date, all of these securities have paid as agreed. These securities are fixed rate, exclude interest rate resets, and were issued prior to 2005.

INCOME TAXES

Our effective tax rate for the first six months of 2008 was 31% compared to 32% for the same period in 2007. The effective rate for the first six months of 2008 is lower due to the decrease in underwriting income, which is taxed at 35%. Effective rates are dependent upon components of pretax earnings and the related tax effects.

Edgar Filing: RLI CORP - Form 10-Q

Income tax expense attributable to income from operations differed from the amounts computed by applying the U.S. federal tax rate of 35% to pretax income for the first six months of 2008 and 2007 as a result of the following:

(in thousands)	2008		2007	
	Amount	%	Amount	%
Provision for income taxes at the Statutory rate of 35%	\$ 32,578	35%	\$ 42,345	35%
Increase (reduction) in taxes resulting from:				
Tax exempt interest income	(3,174)	-4%	(2,965)	-2%
Dividends received deduction	(948)	-1%	(859)	-1%
Dividends paid deduction	(245)	0%	(237)	0%
Other items, net	762	1%	331	0%
Total tax expense	\$ 28,973	31%	\$ 38,615	32%

LIQUIDITY AND CAPITAL RESOURCES

We have three primary types of cash flows: (1) cash flows from operating activities, which consist mainly of cash generated by our underwriting operations and income earned on our investment portfolio, (2) cash flows from investing activities related to the purchase, sale and maturity of investments, and (3) cash flows from financing activities that impact our capital structure, such as changes in debt and shares outstanding.

The following table summarizes cash flows for the six month periods ended June 30, 2008 and 2007.

	2008	2007
	(in thousands)	
Operating cash flows	\$ 86,568	\$ 89,047
Investing cash flows	\$ (31,440)	\$ (76,107)
Financing cash flows	\$ (55,128)	\$ (12,940)
Total	\$	\$

Cash flows from operating activities decreased slightly during the first six months of 2008 compared to that reported for the same period in 2007, due to the timing of certain reinsurance, claim and other payments. In both 2008 and 2007, available operating cash flow has been used in investing activities to purchase additional investment securities and in financing activities to fund the repurchase of our stock.

Our common stock repurchase program, which authorizes us to repurchase up to \$200 million of our Company's common stock, was initially approved by our Board of Directors on May 3, 2007 for \$100 million. On November 14, 2007, our Board of Directors increased the previously announced repurchase program by \$100 million, for a total of \$200 million of our common stock. During the second quarter of 2008, we repurchased 318,000 shares for \$15.9 million under the plan. As of June 30, 2008, we have repurchased 2,838,800 shares for a total of \$159.9 million.

We have \$100.0 million in long-term debt outstanding. On December 12, 2003, we completed a public debt offering, issuing \$100.0 million in senior notes

maturing January 15, 2014 (a 10-year maturity), and paying interest semi-annually at the rate of 5.95% per annum. The notes were issued at a discount resulting in proceeds, net of discount and commission, of \$98.9 million. As of June 30, 2008, we are party to reverse repurchase agreements (short-term debt) totaling \$25.9 million, with an annual interest rate of 2.45%.

We are not party to any off-balance sheet arrangements.

At June 30, 2008, we had short-term investments and other investments maturing within one year, of approximately \$74.0 million and investments of \$393.3 million maturing within five years. We maintain a revolving line of credit with one financial institution, which permits us to borrow up to an aggregate principal amount of \$25.0 million. Under certain conditions, the line may be increased up to an aggregate principal amount of \$50.0 million. The facility has a three-year term that expires on May 31, 2011. As of June 30, 2008, no amounts were outstanding on this facility.

We believe that cash generated by operations, cash generated by investments and cash available from financing activities will provide sufficient sources of liquidity to meet our anticipated needs over the next 12 to 24 months.

We have not had any liquidity issues affecting our operations as we have sufficient cash flow to support operations. In addition to the line of credit, our highly liquid investment portfolio and additional reverse repurchase debt capacity provide additional sources of liquidity.

Our investment portfolio has limited exposure to structured asset backed products. We have approximately \$27 million in asset backed securities which are pools of assets collateralized by cash flows from several types of loans, including home equity, credit cards, autos, and similar obligations. Included in this total is roughly \$3 million in subprime home equity exposure. We have approximately \$56 million in securities backed by commercial mortgages and roughly \$205 million in securities backed by conforming Freddie Mac, Fannie Mae and Ginnie Mae residential loans. If you exclude the conforming Freddie Mac, Fannie Mae, and Ginnie Mae mortgages our exposure to asset backed products is roughly 5 percent of our investment portfolio and our direct subprime exposure is less than 1 percent.

We maintain a well-diversified investment portfolio representing policyholder funds that have not yet been paid out as claims, as well as the capital we hold for our shareholders. As of June 30, 2008, our investment portfolio had a book value of \$1.8 billion. Invested assets at June 30, 2008, decreased by \$34.8 million from December 31, 2007.

As of June 30, 2008, our fixed-income portfolio had the following rating distribution:

AAA	55.7%
AA	20.0%
A	19.1%
BBB	5.2%
Total	100.0%

Edgar Filing: RLI CORP - Form 10-Q

As of June 30, 2008, the duration of the fixed income portfolio was 4.7 years. Our fixed-income portfolio remained well diversified, with 811 individual issues as of June 30, 2008.

At June 30, 2008, our equity portfolio had a fair value of \$307.1 million and is also a source of liquidity. The securities within the equity portfolio remain primarily invested in large-cap issues with strong dividend performance and real estate investment trust (REIT) securities. Our preferred stock portfolio had a fair value of \$41.6 million as of June 30, 2008. In the equity and preferred stock portfolios, the strategy remains one of value investing, with security selection taking precedence over market timing. We use a buy-and-hold strategy, minimizing both transactional costs and taxes.

As of June 30, 2008, our equity portfolio had a dividend yield of 3.1% compared to 2.2% for the S&P 500 index. Because of the corporate dividend-received-deduction applicable to our dividend income, we pay an effective tax rate of only 14.2% on dividends, compared to 35.0% on taxable interest and REIT income and 5.3% on municipal bond interest income. As with our bond portfolio, we maintain a well-diversified group of 127 equity securities.

Our capital structure is comprised of equity and debt outstanding. As of June 30, 2008, our capital structure consisted of \$100.0 million in 10-year maturity senior notes maturing in 2014 (long-term debt), \$25.9 million in reverse repurchase debt agreements with a maturity of three months, and \$741.1 million of shareholders' equity. Debt outstanding comprised 14.5% of total capital as of June 30, 2008.

We paid a quarterly cash dividend of \$0.25 per share on July 15, 2008, an increase of \$.02 from the prior quarter, representing our 128th consecutive quarterly dividend. We have increased dividends for 33 straight years.

Dividend payments to us from our principal insurance subsidiary are restricted by state insurance laws as to the amount that may be paid without prior approval of the regulatory authority of Illinois. The maximum distribution in a rolling 12-month period is limited by Illinois law to the greater of 10% of policyholder surplus as of December 31 of the preceding year or the net income of the Company for the 12-month period ending December 31 of the preceding year. Therefore, the maximum dividend that can be paid by RLI Insurance Company in a rolling 12-month period ending in 2008 without prior approval is \$126.2 million which represents RLI Insurance Company's 2007 net income. Dividends that have been paid by RLI Insurance Company to RLI Corp. in the first six months of 2008 include \$40.0 million on March 28th and \$25.0 million on June 27th, for a total of \$65 million year-to-date. Dividends paid the last six months of 2007 totaled \$85.0 million, bringing the total for the rolling 12-month period to \$150.0 million, exceeding the limitation of \$126.2 million. Therefore, permission for the special dividend was sought and obtained from the Illinois Department of Insurance. These dividends are paid to provide additional capital to RLI Corp. from RLI Insurance Company and used for the share repurchase plan, shareholder dividends, interest on senior notes, and general corporate expenses.

Interest and fees on debt obligations totaled \$3.5 million for the first six months of 2008, up \$0.5 million from the same period in 2007. As of June 30, 2008, outstanding debt balances totaled \$125.9 million, compared to \$127.0 million at June 30, 2007. The June 30, 2008 debt balance is comprised of the \$100.0 million in senior notes and \$25.9 million in reverse repurchase

agreements. The June 30, 2007 balance consisted of the \$100.0 million in senior notes and \$27.0 million in reverse repurchase agreements. We have incurred interest expense on debt at the following average interest rates for the six month periods ended June 30, 2008 and 2007:

	2Q 2008	2Q 2007
Line of Credit	NA	NA
Reverse repurchase agreements	3.76%	5.45%
Total short-term debt	3.76%	5.45%
Senior Notes	6.02%	6.02%
Total Debt	5.52%	6.01%

THREE MONTHS ENDED JUNE 30, 2008 COMPARED TO THREE MONTHS ENDED JUNE 30, 2007

Consolidated revenues, as displayed in the table that follows, totaled \$160.0 million for the second quarter of 2008 compared to \$171.5 million for the same period in 2007.

	For the Three-Month Period Ended June 30,			
Consolidated revenues (in thousands)	2008		2007	
Net premiums earned	\$	132,295	\$	137,488
Net investment income		19,605		19,077
Net realized investment gains		8,075		14,967
Total consolidated revenue	\$	159,975	\$	171,532

Consolidated revenue for the second quarter of 2008 decreased \$11.6 million, or 7%, from the same period in 2007. Net premiums earned for the Group decreased 4% from 2007 levels, as casualty writings continue to decline due to overall rate softening. Net investment income improved 3% to \$19.6 million despite a decline in available investment yields.

Net after-tax earnings for the second quarter of 2008 totaled \$38.7 million, \$1.77 per diluted share, compared to \$49.9 million, \$2.04 per diluted share, for the same period in 2007. In the second quarter of 2008, favorable development on prior years' loss reserves resulted in additional pretax earnings of \$18.5 million. Partially offsetting this favorable development in 2008 was \$2.2 million in property losses on Midwest floods. In the second quarter of 2007, favorable development on prior years' loss and hurricane reserves resulted in additional pretax earnings of \$22.8 million. Bonus and profit sharing-related expenses related to these specific items totaled \$1.1 million in 2008 and \$2.3 million in 2007. These performance-related expenses affected policy acquisition, insurance operating and general corporate expenses. Bonuses earned by executives, managers and associates are predominately influenced by corporate performance (operating earnings and return on capital).

During the second quarter of 2008, equity in earnings of unconsolidated investee totaled \$3.9 million from Maui Jim, Inc. The second quarter of 2007 reflected \$4.4 million in income.

Edgar Filing: RLI CORP - Form 10-Q

Results for the second quarter of 2008 included pretax realized gains of \$8.1 million, compared to pretax gains of \$15.0 million, for the same period last year. Realized gains are taxed at the statutory rate of 35%.

Comprehensive earnings, which include net earnings plus other comprehensive earnings (primarily the change in unrealized gains/losses net of tax), totaled

\$13.3 million, \$0.61 per diluted share, for the second quarter of 2008, compared to comprehensive earnings of \$34.9 million, \$1.43 per diluted share, for the same period in 2007. Unrealized losses, net of tax, for the second quarter of 2008 were \$25.3 million, compared to \$15.0 million for the same period in 2007. With all of the uncertainty in the economy and financial markets, the equity markets continued to struggle in the second quarter of 2008. For the quarter, the equity portfolio returned -1.9% resulting in unrealized losses.

RLI INSURANCE GROUP

As reflected in the table below, gross premiums written for the Group declined to \$185.0 million for the second quarter of 2008 from \$212.1 million in the second quarter of 2007, primarily attributable to a decrease in casualty and property writings. Underwriting income for the Group declined \$10.0 million to \$29.1 million for the second quarter of 2008. Results for both years were favorably impacted by prior accident years loss reserve releases. The GAAP combined ratio totaled 78.0 in 2008, compared to 71.6 in 2007. The increase in combined ratio was primarily attributable to an increase in the Group's loss ratio. The Group's loss ratio increased to 41.4 for 2008, compared to 37.5 for 2007. The loss ratio in 2007 included a greater amount of favorable development on prior accident years' loss reserves.

	For the Three-Month Period Ended June 30,	
	2008	2007
Gross premiums written (in thousands)		
Casualty	\$ 107,274	\$ 127,250
Property	57,780	66,256
Surety	19,968	18,585
Total	\$ 185,022	\$ 212,091
Underwriting income (in thousands)		
Casualty	\$ 15,544	\$ 25,268
Property	9,530	8,791
Surety	4,065	5,042
Total	\$ 29,139	\$ 39,101
Combined ratio		
Casualty	80.2	71.2
Property	74.0	74.6
Surety	76.2	66.9
Total	78.0	71.6

Casualty

Edgar Filing: RLI CORP - Form 10-Q

Gross premiums written for the casualty segment totaled \$107.3 million for the second quarter of 2008, a decrease of \$20.0 million, or 16%, from the same

period last year. This segment continues to feel the pressure of significant rate reductions. General liability, our largest growth contributor over the past several years, posted gross premiums written of \$36.8 million for the second quarter of 2008, a decrease of \$12.8 million, or 26%, from the same period last year. While rates have continued to deteriorate, this coverage has sustained profitable results. Transportation gross premiums written totaled \$14.6 million, a decrease of \$1.5 million, or 10%, from the second quarter of 2007, due to continuing price and volume declines. Executive products reported gross premiums written of \$13.3 million in the second quarter of 2008, a decline of \$2.7 million, or 17%, from the same period last year. On a positive note, gross premiums written for personal umbrella advanced 4% to \$16.1 million from the same period in 2007. Despite the overall rate softening, we believe we will continue to find profitable opportunities. As the casualty market continues to soften, we will remain focused on growing areas that provide the best return, while maintaining strict adherence to underwriting discipline.

In total, the casualty segment posted underwriting income of \$15.5 million, compared to \$25.3 million for the same period last year. Both periods included favorable development on prior years' loss reserves. Results for 2008 include favorable loss development on prior accident years, primarily 2002 through 2006. Products affected were general liability, commercial and personal umbrella and executive products. Due to this positive emergence, during the second quarter of 2008, we released reserves. These reserve releases improved the segment's underwriting results by \$15.2 million. From a comparative standpoint, results for 2007 include \$19.4 million of favorable loss experience on prior accident years (1998 through 2005) primarily for general liability, umbrella, transportation, executive products, and employer's indemnity. Overall, the combined ratio for the casualty segment was 80.2 for 2008 compared to 71.2 in 2007. The segment's loss ratio was 49.7 in 2008 compared to 41.8 in 2007, primarily driven by increased expected loss ratios for the 2008 accident year and a greater amount of favorable development that impacted the 2007 results. As described in our 2007 Annual Report on Form 10-K, we reflect historical loss experience, historical and projected price changes, and historical and projected loss cost inflation in our expected loss ratio projections. In 2008, we anticipated continued rate declines and moderate loss cost inflation, which resulted in increased actuarial loss projections for the 2008 accident year. The expense ratio for the casualty segment was 30.5 for the second quarter of 2008 compared to 29.4 for the same period of 2007.

Property

Gross premiums written for the Group's property segment totaled \$57.8 million, a decrease of \$8.5 million, or approximately 13%, from the same period last year. Our domestic fire book posted gross premiums written of \$20.8 million, a decrease of \$7.4 million, or 26%, from the same period last year. Our difference-in-conditions (DIC) gross premiums written declined \$7.4 million, or 33%, to \$15.1 million for the second quarter of 2008. Increased competition for non-catastrophe exposed accounts, combined with the softening of rates for earthquake and coastal wind-exposed risks, continue to impact the overall property market. Offsetting this decline, our marine division reported \$17.5 million in gross premiums written during the second quarter of 2008, an increase of \$5.8 million, or 50%, from the same period last year.

Net premiums earned for the segment increased \$2.2 million, or 6%, from the second quarter of 2007 while net premiums written decreased \$4.8 million, or

10%, from same period last year. The current increase in net premiums earned is reflective of the increase in net premiums written experienced in the first quarter of 2008. The segment has benefitted from decreased catastrophe costs resulting in a reduction in ceded catastrophe premium of \$2.7 million during the second quarter of 2008. Further, the segment reduced the amount of facultative reinsurance purchased resulting in reduced ceded written premium of \$1.8 million and reduced ceded earned premium of \$2.3 million during the second quarter of 2008. In addition, the marine division, our largest growth contributor, represents a larger percentage of the segment premium and has increased its retention rate in 2008. Therefore, the division retains an increased portion of the premium, along with a heightened level of risk. Net premiums written for that division increased \$5.4 million, or 52%, while net premiums earned increased \$4.1 million, or 55%, in the second quarter 2008 as a result of the growth in production and reduced reinsurance costs.

Underwriting income for the segment was \$9.5 million for the second quarter of 2008, compared to \$8.8 million for the same period in 2007. Results for 2008 include favorable loss development on prior accident years, primarily 2004 through 2006, for marine and construction. Due to this positive emergence, during the second quarter of 2008, we released reserves. These reserve releases improved the segment's underwriting results by \$2.1 million. This favorable development was offset by \$2.2 million in property losses on Midwest floods. From a comparative standpoint, results for the second quarter of 2007 included \$1.6 million of favorable loss experience on prior accident years (prior to 1999), on assumed property business and hurricanes (2005). However, increased frequency and severity of habitational fire losses negatively impacted results for 2007. Revised underwriting guidelines for habitational risks have negatively impacted written premium but are contributing to more stable and profitable underwriting results in 2008.

Segment results for 2008 translate into a combined ratio of 74.0, compared to 74.6 for the same period last year. The segment's loss ratio improved to 37.8 from 41.8 in 2007, due to the aforementioned reduction in loss activity from habitational risks.

From an expense standpoint, the segment's expense ratio for the second quarter increased to 36.2 from 32.8 in 2007 due to increased commissions and the investment in additional underwriters. In addition, marine, our primary growth product in the segment, carries higher policy acquisition costs than other products within the segment.

Surety

The surety segment posted gross premiums written of \$20.0 million for the second quarter of 2008, an increase of \$1.4 million, or 7%, from the same period last year. Premium growth was experienced across miscellaneous, contract and energy lines. The segment posted underwriting income of \$4.1 million, compared to \$5.0 million for the same period last year. Results for 2008 include favorable loss development on prior accident years, primarily 2002, which led to reserve releases during the second quarter of 2008. These reserve releases improved the segment's underwriting results by \$1.1 million. Results for 2007 included \$1.6 million of favorable loss development on a prior accident year (2005).

The combined ratio for the surety segment totaled 76.2 for the second quarter of 2008, versus 66.9 for the same period in 2007. The segment's loss ratio was 11.0 for 2008, compared to 3.1 for 2007, as both periods were favorably

impacted by the aforementioned reserve releases. In 2008, loss ratios on the current accident year are up slightly, reflective of our expectation of moderate loss cost inflation. The expense ratio increased slightly to 65.2 compared to 63.8 for the same period last year as acquisition costs rose with the addition of underwriters and expansion efforts over the past year.

INVESTMENT INCOME AND REALIZED CAPITAL GAINS

Our investment portfolio generated net dividend and interest income of \$19.6 million during the second quarter of 2008, an increase of 2.8% over that reported for the same period in 2007. The improvement in income is due to an increased asset base and higher yields. On an after-tax basis, investment income increased by 3.4%.

Yields on our fixed income investments for the second quarter of 2008 and 2007 are as follows:

	2Q 2008	2Q 2007
<u>Pretax Yield</u>		
Taxable	5.48%	5.33%
Tax-Exempt	3.94%	4.03%
<u>After-tax yield</u>		
Taxable	3.56%	3.46%
Tax-Exempt	3.74%	3.82%

We realized \$8.1 million in capital gains in the second quarter of 2008, compared to capital gains of \$ 15.0 million in the second quarter of 2007. Investment gains in 2008 relate to the sale of certain equity securities deemed to have reached their full value. Funds received were used to further diversify the investment portfolio.

We regularly evaluate the quality of our investment portfolio. When we believe that a specific security has suffered an other-than-temporary decline in value, the investment's value is adjusted by reclassifying the decline from unrealized to realized losses. This has no impact on shareholders' equity.

There were no losses associated with the other-than-temporary impairment of securities in the second quarters of 2008 or 2007, however, continued market volatility could lead to impairment in subsequent quarters.

INCOME TAXES

Our effective tax rate for the second quarter of 2008 was 32% compared to 32% for the same period in 2007. Effective rates are dependent upon components of pretax earnings and the related tax effects.

Edgar Filing: RLI CORP - Form 10-Q

Income tax expense attributable to income from operations differed from the amounts computed by applying the U.S. federal tax rate of 35% to pretax income for the second quarter of 2008 and 2007 as a result of the following:

(in thousands)	2008		2007	
	Amount	%	Amount	%
Provision for income taxes at the Statutory rate of 35%	\$ 19,992	35%	\$ 25,846	35%
Increase (reduction) in taxes resulting from:				
Tax exempt interest income	(1,637)	-3%	(1,476)	-2%
Dividends received deduction	(463)	-1%	(417)	-1%
Dividends paid deduction	(125)	0%	(117)	0%
Other items, net	704	1%	158	0%
Total tax expense	\$ 18,471	32%	\$ 23,994	32%

ITEM 3. Quantitative and Qualitative Disclosures about Market Risk

Market risk is the risk of economic losses due to adverse changes in the estimated fair value of a financial instrument as the result of changes in equity prices, interest rates, foreign exchange rates and commodity prices. Our consolidated balance sheets include assets and liabilities whose estimated fair values are subject to market risk. The primary market risks are equity price risk associated with investments in equity securities and interest rate risk associated with investments in fixed maturities. From time to time, equity prices and interest rates fluctuate causing an effect on our investment portfolio. We have no exposure to foreign exchange risk and no direct commodity risk.

Our market risk exposures at June 30, 2008, have not materially changed from those identified in our 2007 Annual Report on Form 10-K.

ITEM 4. Controls and Procedures

We maintain a system of controls and procedures designed to provide reasonable assurance as to the reliability of the financial statements and other disclosures included in this report, as well as to safeguard assets from unauthorized use or disposition. An evaluation of the effectiveness of the design and operation of our disclosure controls and procedures was performed, under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer, as of the end of the period covered by this report. Based upon that evaluation, the Chief Executive Officer and Chief Financial Officer have concluded that these disclosure controls and procedures are effective, as of the end of the period covered by this report.

In designing and evaluating our disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurances of achieving the desired control objective, and management necessarily is required to apply its judgment in evaluating the cost-benefit relationship of possible controls and procedures. We believe that our disclosure controls and procedures provide such reasonable assurance.

No changes were made to our internal control over financial reporting during the last fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II - OTHER INFORMATION

Item 1. Legal Proceedings There were no material changes to report.

Item 1A. Risk Factors - There were no material changes to report.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Items 2(a) and (b) are not applicable.

Our common stock repurchase program, which authorizes us to repurchase up to \$200 million of our Company's common stock, was initially approved by our Board of Directors on May 3, 2007 for \$100 million. On November 14, 2007, our Board of Directors increased the previously announced repurchase program by \$100 million, for a total of \$200 million of our common stock. The repurchase program may be suspended or discontinued at any time without prior notice. To the extent reasonably practicable, the program shall be completed no later than one year from the date of approval. During the second quarter of 2008, we repurchased 318,000 shares for \$15.9 million under the plan. The transactions occurred pursuant to open market purchases.

The table below shows our repurchases of the Company's common stock during the second quarter of 2008.

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Program	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Program
April 1, 2008 - April 30, 2008	71,800	\$ 48.20	71,800	\$ 52,495,984
May 1, 2008 - May 31, 2008	172,500	49.80	172,500	43,905,538
June 1, 2008 - June 30, 2008	73,700	52.04	73,700	40,070,513
Total	318,000		318,000	

Item 3. Defaults Upon Senior Securities - Not Applicable

Item 4. Submission of Matters to a Vote of Security Holders

Edgar Filing: RLI CORP - Form 10-Q

At the May 1, 2008 annual shareholders meeting, the vote of the holders of outstanding shares of common stock entitled to vote was as follows:

Election of Directors

	Votes Cast
