RELEVANT EVENT

Mexico City, September 22, 2014, Buenavista del Cobre, S.A. de C.V. (the Company), a subsidiary of Southern Copper Corporation, reports that there was no second spill of acid copper sulfate solution at any of the reservoirs at the Buenavista del Cobre mine.

As a consequence of heavy rains triggered by Hurricane Odile, the Tinajas 1 and Tinajas 2 reservoirs at the mine were overflowing with rainwater. Such incident was timely communicated to the relevant authorities on September 18, 2014. The Mexican Environmental Protection Agency (PROFEPA) has announced that such discharge derives from the rainwater and contains some ferrous elements below hazardous levels, which are not considered a health hazard. (See PROFEPA's official statement at: [http://www.profepa.gob.mx/innovaportal/v/6327/1/mx/aguas\\_pluviales\\_con\\_elementos\\_ferrosos\\_por\\_debajo\\_de\\_la\\_norma\\_analisis\\_de\\_nuevo\\_vertimiento\\_en\\_buenavista\\_del\\_cobre\\_profepa.html](http://www.profepa.gob.mx/innovaportal/v/6327/1/mx/aguas_pluviales_con_elementos_ferrosos_por_debajo_de_la_norma_analisis_de_nuevo_vertimiento_en_buenavista_del_cobre_profepa.html))

Water testing conducted through September 20th, 2014 by PROFEPA, CONAGUA and the Company reported normal acidity levels in the Bacanuchi and Sonora Rivers.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, as amended, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.
