ü Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure

Introduction

Gildan Activewear Inc. (“Gildan” or the “Company”) is submitting this special disclosure report on Form SD as required pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 adopted by the U.S. Securities and Exchange Commission (the “SEC”) and known as the “conflict minerals rule” (the “Conflict Minerals Rule”). The Conflict Minerals Rule implements Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) which requires issuers of securities that are required to file annual and quarterly reports with the SEC to publicly disclose certain information regarding tantalite (coltan; i.e. tantalum), cassiterite (i.e. tin), wolframite (i.e. tungsten) and gold (the “3TGs”) necessary to the production or functionality of products that they manufacture or contract to manufacture.

This disclosure describes (a) the Company’s reasonable country of origin inquiry (the “RCOI”) for the year ended December 31, 2014 (the “2014 Reporting Period”) conducted to determine whether 3TGs in products that the Company manufactures or contracts to manufacture originated in the Democratic Republic of Congo or adjoining countries (collectively the “Covered Countries”), and (b) based on the results of the RCOI, the Company’s determination as to the origin of the 3TGs in products that the Company manufactures or contracts to manufacture.

Company Overview

Gildan is a leading supplier of quality branded basic family apparel, including T-shirts, fleece, sport shirts, underwear, socks, hosiery and shapewear. The Company sells its products under a diversified portfolio of company-owned brands, including the Gildan®, Gold Toe®, Anvil® and Comfort Colors® brands and brand extensions, as well as the Secret®, Silks® and Therapy Plus™ brands. The Company also has the U.S. sock license for Under Armour®, and licenses for Mossy Oak® and New Balance® brands. The Company distributes its products in printwear markets in the U.S. and Canada, as well as in Europe, Asia Pacific and Latin America. The Company also markets its products to a broad spectrum of retailers in the U.S. and Canada. The Company also manufactures for select leading global athletic and lifestyle consumer brands.

Gildan owns and operates vertically-integrated, large-scale manufacturing facilities which are primarily located in Central America and the Caribbean Basin to efficiently service the replenishment needs of its customers in the printwear and retail markets. Gildan has over 42,000 employees worldwide and is committed to industry-leading labour and environmental practices in all of its facilities. More information about the Company and its corporate citizenship practices and initiatives can be found at its corporate websites www.gildan.com and www.genuinegildan.com, respectively.

Due to its position as a downstream manufacturer and distributor of finished products, Gildan does not directly source any minerals from mines, smelters or refiners. 3TGs included in Gildan’s products are in components acquired from suppliers, and Gildan is typically several steps removed from the origin of the ores.

Reasonable Country of Origin Inquiry

Gildan reviewed its entire range of products manufactured and sourced during the 2014 Reporting Period in order to identify all metallic components contained therein and necessary for the production or functionality of such products. Certain zippers (including pulls and stops), buttons, hooks and buckles, all necessary for the functionality of their respective products (the “Metallic Components”) revealed small amounts (in all cases less than two thousand (2000)

parts per million) of tin as well as trace amounts (in all cases less than twenty (20) parts per million) of tantalum, tungsten and gold. The tin found in the Metallic Components was intentionally added during production to render the applicable components more flexible. The trace amounts of tantalum, tungsten and gold are presumed to be mere contaminants.

As a result, Gildan's products subject to the Conflict Minerals Rule analysis and containing tin are: (a) knit tops with zippers, (b) caps that have metal top buttons, buckles and grommets, and (c) towels that have hooks and grommets (the "Products"). Gildan manufactures the knit tops in its own vertically-integrated facilities but sources the caps and towels from third party suppliers. Gildan does not require from its suppliers that any Metallic Component used in its products contains 3TGs.

The RCOI was conducted by sending questionnaires to the three (3) suppliers procuring the Metallic Components for the Products or contracted to manufacture some of the Products containing the Metallic Components (each a "Supplier" and collectively the "Suppliers"). These Suppliers account for less than 1% of Gildan's total suppliers of materials used in

products that the Company manufactured or that the Company contracted to manufacture in 2014. Gildan requested that each Supplier complete the Conflict Free Sourcing's Initiative's (CFSI) Conflict Minerals Reporting Template, which was created by the Electronic Industry Citizenship Coalition and the Global e-Sustainability Initiative as a common means for the collection of sourcing information related to conflict minerals. This reporting template is a common data collection tool used across industries by companies with and without direct smelter relationships, and its questions are designed to generate necessary representations required to make determinations about the origin of the 3TGs.

All three (3) Suppliers responded to the Company's inquiry by completing the Conflict Minerals Reporting Template, provided the Company with written assurances that none of the Products sold to Gildan during the 2014 Reporting Period contain 3TGs that have originated from the Covered Countries and further represented to have in place a conflict minerals sourcing policy. Two (2) of the Suppliers represented to conduct their RCOI with their respective direct suppliers using the Conflict Free Sourcing's Initiative's (CFSI) Conflict Minerals Reporting Template and provided documentary evidence of the Metallic Components' and/or the tin's supply chain. Finally, all three (3) Suppliers identified all the smelters believed to be involved in the smelting of the tin. Such smelters are either listed as Conflict-Free Tin Smelters under the Conflict-Free Smelter Program list provided by the Conflict-Free Smelter Initiative, or located outside the Covered Countries.

The Company determined that it had no reason to believe that the three (3) Suppliers' representations generated in the Conflict Minerals Reporting Template were false or inaccurate, and based on such representations determined in good faith that it had no reason to believe that the tin contained in the Metallic Components used in the Products may have originated from the Covered Countries.

Gildan has posted this disclosure Form SD to its website at <http://www.genuinegildan.com/en/product/raw-material/>
