Incorporated  
(File  
No:  
001-32669)

## Forward-Looking Statements

2

This document contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are typically identified by words or phrases such as may, will, anticipate, estimate, expect, plan, believe, target, forecast, and other words and terms of similar meaning. Forward-looking statements involve certain expectations, projections, goals, forecasts, assumptions, risks and uncertainties. Tronox Incorporated and Tronox Limited caution that any forward-looking statement is not a guarantee of future performance and that actual results could differ materially from those contained in the forward-looking statement. Such forward-looking statements include, but are not limited to, statements about the success of the proposed transaction involving Tronox Incorporated, Tronox Limited and Exxaro Resources Limited ( "Exxaro" ), including financial and operating results, Tronox Incorporated's, Tronox Limited's or Exxaro's plans, objectives, expectations and intentions, the expected timing of completion of the transaction, and other statements that are not historical facts. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include risks and uncertainties relating to the ability to obtain the requisite Tronox Incorporated shareholder approvals; the risk that Tronox Incorporated, Tronox Limited and Exxaro may be unable to obtain governmental and regulatory approvals required for the transaction, or required governmental and regulatory approvals may delay the transaction or result in the imposition of conditions that could cause the parties to abandon the transaction; the performance of the Tronox and Exxaro Mineral Sands business; the risk that a condition to closing of the transaction may not be met; the ability of the combined company to obtain necessary financing to refinance existing indebtedness or modifying existing financing arrangements, and finance the combined business post-closing and the terms on which such financing or modification may be available; the timing to consummate the proposed transaction; the risk that the businesses will not be integrated successfully; the risk that Tronox Limited will not be able to complete registration of its shares with the SEC and/or the listing thereof on a securities exchange, and the timing therefore; the risks to shareholders associated with becoming shareholders of an Australian-domiciled holding company; the risk that the expected cost savings and any other synergies from the transaction may not be fully realized or may take longer to realize than expected; disruption from the transaction making it more difficult to maintain relationships with customers, employees or suppliers; diversion of management time on transaction-related issues; the market value of Tronox Incorporated's products; demand for products for which Tronox Incorporated's businesses supply raw materials; the financial resources of competitors; the market availability of and/or equity financing; the ability to achieve favorable tax structuring for the benefit of Tronox Limited and its subsidiaries and its shareholders; the ability to respond to challenges in international markets; changes in currency exchange rates; political or economic conditions in areas where Tronox Limited and its subsidiaries will operate; the risk of changes in laws and regulations applicable to the business and assets of Tronox Limited and its subsidiaries will operate; trade and regulatory matters; general economic conditions; and other factors and risks identified in the Risk Factors Section of Tronox Incorporated's Registration Statement on form S-4, as amended, filed with the U.S. Securities and Exchange Commission (SEC) on May 4, 2012. Each forward-looking statement speaks only as of the date of the particular statement and neither Tronox Incorporated nor Tronox Limited undertakes any obligation to update or revise its forward-looking statements, whether as a result of new information, future events or otherwise.

#### Additional Information and Where to Find It

This document does not constitute an offer to sell or the solicitation of an offer to buy any securities, or a solicitation of any vote or approval, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such jurisdiction. In connection with the proposed transaction involving Tronox Incorporated, Tronox Limited and Exxaro, Tronox Limited and Tronox Incorporated have filed with the SEC a Registration Statement on Form S-4 that includes a definitive proxy statement of Tronox Incorporated that also constitutes a prospectus of Tronox Limited. The registration statement relating to the securities to be offered was declared effective by the Securities and Exchange Commission on May 4, 2012. Tronox Incorporated commenced the mailing of the the proxy statement/prospectus to its stockholders on or about May 7, 2012. Tronox Incorporated urges investors and stockholders to read the proxy statement/prospectus (including any amendments or supplements

thereto)

regarding

the

proposed

transaction,

as

well

as

other

documents

filed

with

the

SEC,

because

they

contain important information. You may obtain copies of all documents filed with the SEC regarding this transaction, free of charge, at the SEC's website ([www.sec.gov](http://www.sec.gov)). You may also obtain these documents, free of charge, from Tronox Incorporated's website ([www.tronox.com](http://www.tronox.com)) under the heading Investor Relations

#### Non-GAAP Financial Measures

EBITDA and Adjusted EBITDA, which are used by management to measure performance, are non-GAAP financial measures. Management believes that EBITDA and Adjusted EBITDA are useful to investors, as EBITDA is commonly used in the industry as a means of evaluating operating performance and Adjusted EBITDA is used in our debt instruments to determine compliance with financial covenants. Both EBITDA and Adjusted EBITDA are included as a supplemental measure of our operating performance because they eliminate items that have less bearing on operating performance and highlight trends in the core business that may not otherwise be apparent when relying solely on GAAP financial measures. In addition, Adjusted EBITDA is one of the primary measures management uses for planning and budgeting processes and to monitor and evaluate financial and operating results. EBITDA and Adjusted EBITDA are not recognized terms under GAAP and do not purport to be an alternative to measures of our financial performance as determined in accordance with GAAP, such as net income (loss). Because other companies may calculate EBITDA and Adjusted EBITDA differently than we do, EBITDA may not be, and Adjusted EBITDA as presented herein is not, comparable to similarly titled measures reported by other companies. A reconciliation of EBITDA and Adjusted EBITDA to

net income are included at the end of this presentation

Additional Information & Non-GAAP

Financial Measures

## Tronox Overview

Tronox Incorporated and Exxaro Mineral Sands are scheduled to close on Friday, June 15, 2012 to form Tronox Limited ( Tronox or the Company ), the only fully integrated global producer and marketer of

TiO  
2  
and  
mineral sands

Creates highly differentiated and attractively  
positioned company in value chain

Drives higher margins, greater scale and  
improved growth prospects

Ore supply assurance reduces earnings volatility  
and enables company to increase capacity to  
serve demand growth

Tronox to benefit on both sides of the supply  
chain as we will be long feedstock

Enhances strategic and financial flexibility to  
build further shareholder value and pursue  
growth opportunities post-closing

Attractive balance sheet and U.S. tax attributes  
3rd largest global producer and  
marketer

of  
TiO  
2  
manufactured  
via

Chloride Technology  
3rd largest global producer of Titanium  
feedstock

2nd largest global producer of Zircon

## Tronox Mineral Sands Operations

### Overview

Tronox Mineral Sands comprises three mining operations: KZN Sands and Namakwa Sands located in South Africa and Tiwest located in Australia

Mineral Sands operations consist of two key product streams

### Titanium Feedstock and Zircon

3rd largest titanium ore feedstock producer globally in 2011 (10% market share) with 3 producing assets

2nd largest zircon producer globally in 2011

(20% market share)

Mineral Sands operations also produces high purity

Pig Iron as a co product

Geographically well positioned to serve markets in

Asia, the Middle East, Europe, North and South

America

Existing inventory will be enough to supply slag

furnaces until the Fairbreeze mine is online

Tronox Mining Operations

KZN Sands operations are located on the East Coast of South Africa

KZN Sands operations comprise four phases:

Mining

Mineral Separation

Smelting

Bulk Terminal

Hillendale mine of KZN Sands is expected to end production in 2012

Fairbreeze mine of KZN Sands is expected to begin production in 2014

Approximately 500,000 tonnes of ilmenite stockpiled at KZN; 3.5 million tonnes excess ilmenite stockpiled at Namakwa Sands; and 500,000 tonnes stockpiled at TiWest provides more than adequate source of alternate supply prior to Fairbreeze expansion onstream

KZN Sands

Tiwest

Namakwa Sands

Namakwa sands operations are on the coastal plain along the west coast of South Africa

Namakwa Sands operations comprise three phases:

Mining

Mineral Separation

Smelting

Produces titanium feedstocks including ilmenite, chloride slag, titanium slag, rutile, as well as co products pig iron and zircon

Tiwest operations are located in Western Australia

Tiwest operates:

Mining

Chandala mineral separation

Dry mills, synthetic rutile plant

Bunbury plant operations

Unique mine to mine

concept: self-

contained from extraction through waste disposal

Large geographical span serves as attractive springboard into Asia-Pacific

Produces titanium feedstocks -

ilmenite,

rutile, synthetic rutile, leucoxene, zircon,

activated carbon and staurolite

Industry Capacity Utilization

1  
During  
the  
last  
cycle,  
over  
380,000  
MT  
of  
capacity

was  
taken  
out  
of  
market,  
which  
Tronox  
estimates

to  
be  
approximately a 7% reduction

Bringing new capacity online requires significant capex, long lead time and difficult to achieve permitting (in particular environmental regulations).

As

a  
result

a  
new  
Chloride  
facility

has  
not  
been  
built

Rising Demand from Emerging Markets

16  
1

Mineral Sands Market

Mineral Sands industry encompasses producers of titanium raw material including ilmenite, titanium slag, rutile, synthetic rutile, and leucoxene

Zircon is a key co-product of titanium mining

Industry has benefited from favorable supply / demand characteristics for both high-grade titanium feedstocks & zircon over the last two years

Titanium Feedstock-

Key Producers

Zircon-

Key Producers

17

Constrained Feedstock Environment is  
Expected to Persist  
Fundamentals for titanium feedstocks remain strong,  
despite recent softening in China  
Developing countries  
intensity of pigment use  
is expected to grow with rising living standards  
(GDP/capita)  
Supply deficits remain structural for most feedstock  
products, particularly for high quality chloride  
feedstocks  
Lack of meaningful investments in titanium

minerals mining industry in the past decade

No new substantive supply expected to enter the market until later this decade

High risk and long lead time (typically 5-7 years) in starting new projects

China remains primarily import dependent for its titanium ore requirements

Ore suppliers have succeeded in recent years in moving prices higher and changing prices quickly

Ore prices are expected to increase for pigment producers, despite short-term demand softening

- 1) TZMI 4Q2011 forecast.
- 2) Goldman Sachs Research

Ore supply is tight, creating a favorable pricing environment for the foreseeable future

18

2

Global Supply / Demand for Titanium Feedstock

Feedstock Pricing<sup>1</sup>

(\$ / tonne)

1

## Overview

### Zircon Market Overview

Zircon is a mineral often produced as a co-product of TiO

2

minerals primarily in Australia and South Africa

Despite 1H 2012 pause, global Zircon demand expected to stay significantly higher than supply

Expected strong long-term demand driven by urbanization, especially in developing economies such as China

Inventories throughout the supply chain at historically low levels

Zircon market fundamentals expected to stay

positive over the long-term  
Structural market deficits expected to  
persist  
No significant new supply sources are  
apparent  
to  
fill  
the  
gap

limited  
number  
of quality projects available for  
development

#### Fundamentals Remain Strong

Following three consecutive quarters of  
substantial price movements for zircon, there  
was a moderation in the price increase for Q4  
2011, with suppliers achieving 10-15% higher  
prices QoQ for shipments in the last quarter of  
the year

China has had the most significant influence  
on zircon offtake, as the output of ceramic  
tiles in the country has slowed in response to  
a weaker domestic housing market

The softer zircon demand resulted in a  
supplier response ahead of the seasonally  
slow shipping period in Q1 2012 associated  
with subdued market activity around Chinese  
New Year, and resulted in some inventory  
building at mine sites

Zircon prices are expected to stabilize in the  
next quarter before trending up in the second  
half of the year as market conditions improve

Material increases in supply will be to meet incremental demand  
New construction very capital intensive and subject to increasing environmental regulations  
Access to ore constrained for any material capacity increases  
IP and know how very limited  
Tronox estimates that during 2007-2009, approximately 7% of global capacity was shuttered  
The projected expansion of TiO<sub>2</sub>  
pigment supply reflects announced but not completed production facilities, most of  
which are in China and producing via the sulfate process  
Current supply dynamics and projected demand increases is expected to result in a continued favorable pricing  
environment over the long term

\* Note: Assuming no Tronox Incorporated shareholders elect to receive exchangeable shares in Tronox Limited.

On September 26, 2011, Tronox entered into a definitive agreement to acquire Exxaro Resources

( Exxaro ) mineral

sands operations, which will create the world's largest vertically-integrated TiO<sub>2</sub> pigment company ( New Tronox )

Exxaro will receive approximately 38.5% of the common equity in New Tronox in exchange for its mineral sands

operations, which will be contributed debt free

Exxaro will retain a 26% ownership interest in the South African operations of the Mineral Sands business in order to comply with South African BEE ownership requirements.

For the LTM period ended 12/31/2011, New Tronox would have generated pro forma revenues of \$2,306 million and Adjusted EBITDA of \$844 million (37% Adjusted EBITDA margin)

New Tronox will have approximately 3,500 employees and 16 locations around the world

The acquisition is expected to close in Q2 2012

Tronox has refinanced its Senior Secured Term Loan (\$425 million at signing) with a new \$550 million Senior Secured Term Loan and \$150 million Senior Secured Delayed Draw Term Loan (together, the Term Facility )

The Term Facility expressly permits the Exxaro Mineral Sands acquisition and, together with cash on hand, will fund all cash uses to permit the Exxaro Mineral Sands acquisition

Tronox's existing \$125 million ABL Revolver will be replaced with a new \$300 ABL Revolving Facility upon the close of the acquisition.

Exxaro Transaction Detail

Transaction Structure Detail

Current Tronox shareholders to exchange existing common stock for new Class A shares in Tronox Limited, a newly-formed Australian-domiciled corporation and \$12.50 per share

Option to receive exchangeable shares with right to exchange later into Class A shares and \$12.50 per share, subject to minimum and maximum (with pro ration) election thresholds

Exxaro contributing mineral sands operations to New Tronox in exchange for Class B shares in Tronox Limited

Exxaro to retain 26% direct minority ownership in the South African businesses to comply with South African BEE ownership requirements

Approximately 10.0 million shares will be issued to Exxaro excluding put/call shares

Put/call shares: 1.4 million shares in exchange for Exxaro's 26% direct interest in the South African operations in the event that the BEE compliance structure is no longer required

Transaction is taxable to Tronox shareholders

Pro Forma Shares Outstanding

25.9 million shares outstanding (excluding Exxaro's put/call shares)

Intention to list the NYSE after closing

24

Key Governance Terms

9 member board comprising:

6 Class A directors (nominated by Tronox)

3 Class B directors (nominated by Exxaro)

Tom Casey to remain Chairman & CEO of combined company

Key members of Exxaro's senior management expected to join

Tronox including current leader of mining operations

Three-year lockup period for Exxaro

Standstill limiting Exxaro's ownership to less than 45% until the third anniversary of the transaction

Thereafter, board approval process and/or majority support from unaffiliated shareholders required in order for Exxaro to

go above 50%

25

Key Governance Terms (cont d)

Limited significant matters require supermajority (6 of 9)

approval at board level, including:

Change in Executive Management

Material acquisitions / dispositions

Sale of the Company

Decision to pay dividends

Class voting (approval of Class A and Class B shareholders voting separately) to approve merger or sale of the company

Majority of all the shares in each class for as long as Exxaro s

Class B voting interest is at least 20%

Receipt of all regulatory approvals

Effective New Tronox and Tronox Inc. registration statement

Tronox shareholder approval

\$20 million termination fee if Exxaro terminates following a fiduciary change in recommendation by Tronox's board

Anticipated Closing June 2012

Tronox Mineral Resources & Reserves Endnotes

27

1

Mineral Resources are quoted inclusive of mineral resources that have been modified to ore reserves.

2

Tonnages are quoted in metric million tonnes.

3

"ROM" stands for Run of Mine, which is a mining term that means a stockpile of ore that has been created without any blending or processing, meaning that the ore has been mined and transported to the stockpile location in its original condition. ROM is quoted in millions of tonnes.

4

All extraction methods are open- cut mining operations.

5

"LoMP" stands for Life of Mine Plan, which means either the total number of years needed to extract reserves from a designed mine pit, or a design and costing study of an existing operation in which appropriate assessments have been made of realistic assumed modifying factors to demonstrate at the time of reporting that extracting is reasonably justified

6

Proven reserves means the economically mineable material derived from a measured resource. Proven reserves are estimated with a high level of confidence, include contaminating materials and allow for losses that are expected to occur when the material is mined.

7

Probable reserves means the economically mineable material derived from a measured or indicated resource, or both. Probable reserves are estimated at a lower level of confidence than proven reserves, include contaminating materials and allow for losses that are expected to occur when the material is mined.

8

A renewal for the Port Durnford prospecting right has been submitted. The outcome is still pending.

9

A renewal for the Centane prospecting right has been submitted. The outcome is still pending.

10

A portion of the measured resources within Namakwa Sands's mining right, but falling outside the boundary of the approved environmental management plan ("EMP"), was converted to probable reserves pending approval from the DMR to extend Namakwa Sands's EMP boundary. Exxaro Mineral Sands submitted an application to the DMR to extend the Namakwa Sands's EMP boundary, which was approved on March 28, 2012.

11

In 2011, the Namakwa Sands proven and probable reserves amount decreased by approximately 130 million tonnes from the 2010 amount due to mining of the reserves and the exclusion in 2011 of the east orange feldspathic sand ("EOFS") material from Namakwa Sands's life of mine and mineral reserves following a pre- feasibility study conducted in 2011, which concluded that building a proposed new plant to process the EOFS material was not currently economically feasible. The EOFS material, however, still remains part of Namakwa Sands's mineral resources, and Exxaro Mineral Sands is investigating alternative technologies for processing the EOFS material.

12

Block P, Port Dunford, Centane, and Cooljarloo West are exploratory programs without known reserves.
